MA 9104 STATISTICAL METHODS FOR WATER RESOURCES

3 1 0 4

OBJECTIVE:

 To provide the students the concept and an understanding of statistics, probability and random processes, needed for mathematical modeling of water resources phenomena.

UNIT I EMPIRICAL STATISTICS

9+3

Types of Sampling – Description of discrete and continuous data – Measures of Central tendency and Dispersion for grouped and ungrouped data – Measures of position – Box and Whisker plot.

UNIT II ESTIMATION THEORY

9+3

Unbiased Estimators – Methods of Moments – Maximum Likelihood Estimation – Curves fitting by Principle of least squares – Regression Lines.

UNIT III TESTING OF HYPOTHESIS

9+3

Sampling distributions – Type I and Type II errors – Tests based on Normal, t, χ^2 and F distributions for testing of mean, variance and proportions – Tests for Independence of attributes and Goodness of fit.

UNIT IV DESIGN OF EXPERIMENTS

9+3

Analysis of variance – One-way and two-way classifications – Completely randomized design – Randomized block design – Latin square design.

UNIT V MULTIVARIATE ANALYSIS TECHNIQUES

9+3

Covariance matrix – Correlation Matrix – Multivariate Normal density function – Principlal components – Sample variation by principal components – Principal components by graphing.

TOTAL (L:45 +T:15): 60 PERIODS

IM 9101 INTEGRATED WATER RESOURCES MANAGEMENT

L T P C 3 0 0 3

OBJECTIVE:

- Students will be introduced to the role of disciplines of ecology and socioeconomics play in management of water resources..
- They will be exposed to global food security and public-private participation issues and legal and regulatory settings, in the context of IWRM

UNIT I CONTEXT FOR IWRM

8

Water as a global issue: key challenges and needs – Definition of IWRM within the broader context of development – Complexity of the IWRM process – Examining the key elements of IWRM process.

UNIT II WATER ECONOMICS

12

Economic view of water issues: economic characteristics of water good and services – Non-market monetary valuation methods – Water economic instruments, policy options for water conservation and sustainable use – Case studies. Pricing: distinction between values and charges – Private sector involvement in water resources management: PPP objectives, PPP options, PPP processes, PPP experiences through case studies – Links between PPP and IWRM.

UNIT III WATER SUPPLY AND HEALTH WITHIN THE IWRM CONSIDERATION

Links between water and human health: options to include water management interventions for health – Health protection and promotion in the context of IWRM – Health impact assessment of water resources development.

UNIT IV AGRICULTURE IN THE CONCEPT OF IWRM

10

Water for food production: 'blue' versus 'green' water debate – Virtual water trade for achieving global water security – Irrigation efficiencies, irrigation methods and current water pricing.

UNIT V WATER LEGAL AND REGULATORY SETTINGS

6

Basic notion of law and governance: principles of international and national law in the area of water management. Understanding UN law on non-navigable uses of international water courses – Development of IWRM in line with legal and regulatory framework.

TOTAL: 45 PERIODS

ADVANCED IRRIGATION ENGINEERING

L T P C 3 0 2 4

OBJECTIVE:

IW 9101

- Students will be introduced to soil-water-plant relationship from the context of irrigation water management.
- At the completion of the course the students would have learnt about irrigation systems in general, and irrigation scheduling, irrigation water distribution, and design and evaluation of irrigation methods, in particular.

UNIT I DEVELOPMENT OF IRRIGATION

8

Importance of irrigation – Impact of irrigation on development of humanity – Need for irrigation in India – Development of irrigation in India – National Water Policy – Future developments in irrigation – Irrigation with canal, tank and ground water – Need for canal Irrigation management – Inadequacy of canal irrigation management – Objectives of and criteria for good canal irrigation.

UNIT II CROP WATER REQUIREMENT

8

Infiltration and movement of water in soil – Soil-water-plant relationship – Water requirement of crops – Evapotranspiration (ET) and consumptive use - Methods of estimating ET – Effective rainfall – Irrigation requirement - Duty of water – Irrigation of low land and upland crops.

UNIT III WATER DISTRIBUTION

9

Canal network and canal regulation – Tank Irrigation – Methods of distribution: supply based and demand based – Delivery of water to farms – Measurement of water – Scheduling of irrigation – Criteria for scheduling – Frequency and interval of irrigation.

UNIT IV SURFACE IRRIGATION METHODS

11

Classification of irrigation methods – Border irrigation: design parameters, evaluation and ideal wetting pattern – Furrow irrigation: design parameters, types of furrows, evaluation, ideal wetting pattern and planting techniques – Basin irrigation: types of basins, suitable crops, soils and slopes, ideal wetting pattern, shapes and size – Efficiency of surface irrigation methods – Land leveling and shaping.

UNIT V DRIP AND SPRINKLER IRRIGATION METHODS

9

Drip irrigation: components, suitable crops and land types – Layout, design and evaluation of drip irrigation systems – Sprinkler irrigation: types, components, and suitable crops, slope, soils and climate – Design of sprinkler irrigation systems

PRACTICAL 30

Collection of data on agro-meteorological parameters – Estimation of soil moisture for irrigation scheduling – Measurement of infiltration – Demonstration on measurement of plant transpiration – Flow measurement in irrigated channels – Flow measurement in closed conduit – Evaluation of surface and micro irrigation systems.

TOTAL (L:45 + P:30): 75 PERIODS

- 1. Majumdar D.P., Irrigation Water management Principles and Practices. Prentice Hall of India, New Delhi, 2000.
- 2. Asawa G.L, Irrigation Engineering. New Age International Private limited, second edition, New Delhi, 2006
- 3. Michel A.M., Irrigation theory and practice. Vikas publishing House, New Delhi. 1999.
- 4. Irrigation and Drainage paper 24. Crop water requirement. FAO, Rome, 1977.
- 5. Irrigation and Drainage paper 56. Crop water requirement. FAO, Rome, 1988.
- 6. Sathyanarayana C, "Design of minor irrigation and Canal Structures." Wiley Eastern Ltd, New Delhi, 1989

OBJECTIVE:

- To introduce the students to soils from a crop production perspective, as well as to expose them to the principles and practices of crop production.
- At the completion of the course the students would have knowledge of soils and crop plants which they can beneficially use as specialists in irrigation water management.

UNIT I SOILS AND THEIR CLASSIFICATION

7

Understanding soils from crop production perspective – Soil formation, composition and profile characteristics –Taxonomic classification and its interpretation – Soil survey.

UNIT II SOIL-WATER RELATIONSHIPS

10

Soil physical properties – Soil water potential – Soil moisture characteristic curve – Moisture constants – Entry, retention and flow of water in the root zone – Concept of plant-available water – Measurement of soil water content and matric tension – Soil plant atmosphere continuum – Excess moisture in the root zone – Irrigability of soils

UNIT III SOIL FERTILITY AND PRODUCTIVITY

8

12

Plant-essential nutrient elements – Their supply in soils – Regulation of nutrient supply through ion exchange phenomena – Soil reaction – Soil biology: beneficial and harmful effects on crop plants – Fertility vs. productivity – Problems of salinity and sodicity.

UNIT IV PRINCIPLES OF AGRONOMY AND CROP PRODUCTION

Origin, adaptation and distribution of crops – Influence of genetic and environmental factors on crop growth – Role of agronomy – Growth stages of crops – Competition in plant communities – Biological and economic yield – Yield components – Cropping systems – Tillage – Seed treatment and nursery practices – Density and plant arrangement – Nutrient management – Weed management – Plant protection, including the concept of Integrated Pest Management (IPM).

UNIT V CROP PRODUCTION PRACTICES

8

Seasons of cropping and production practices for crops of importance in Tamil Nadu: cereals and millets; grain legumes; oilseed crops; and cash crops such as sugarcane, cotton, banana and coconut.

TOTAL: 45 PERIODS

- 1. Brady N.C., The Nature and Properties of Soil. Prentice-Hall of India Pvt. Ltd. New Delhi. 1995.
- 2. ICAR, Hand Book of Agriculture. Indian Council of Agricultural Research, New Delhi. 1999.

- 4. Morachan Y.B., Crop Production and Management. Oxford and IBH Publishing Co., New Delhi. 1984.
- 5. DOA, Crop Production Guide. Directorate of Agriculture, Government of Tamil Nadu, Chepauk, Chennai. 1999.

IW 9121 GROUND WATER AND DRAINAGE ENGINEERING

L T P C 3 0 0 3

OBJECTIVE:

- Students will be exposed to ground water, hydraulics of ground water related to drainage, drainage concepts, planning, design and management of drainage related work.
- They will learn about the latest developments in ground water applications to drainage on the basis of a clear understanding of the principles of drainage engineering.

UNIT I BASICS OF GROUND WATER

8

Occurrence of Ground water – Utilization – Ground water component in hydrologic cycle – Geological formations – Types of aquifers and their characteristics – Ground water movement – Darcy's Law.

UNIT II GROUND WATER HYDRAULICS RELATED TO DRAINAGE10 Steady and unsteady flow of ground water— Ground water recharge — Dupuit-Forchheimer assumptions - Subsurface flow into drains — Steady and unsteady state drainage equations — Seepage from river into aquifers — Seepage from open channels.

UNIT III DRAINAGE PRINCIPLES AND CRITERIA

g

Factors to be considered in land drainage – Combined irrigation and drainage systems - Water balance – Equations for water balance – Drainage surveys – Agricultural drainage criteria – Effect of field drainage systems on agriculture.

UNIT IV DESIGN AND MANAGEMENT OF DRAINAGE SYSTEMS

(

Drainage materials – Surface drainage systems, their components and applications in sloping areas – Subsurface drainage systems – Mole drainage - Tube well irrigation - Drainage application and design – Management and maintenance of drainage systems.

UNIT V SALINITY CONTROL

9

Salinity in relation to irrigation and drainage – Salt balance of the root zone – Leaching process – Bio drainage – Environmental aspects of drainage.

TOTAL: 45 PERIODS

- 1. Todd D.K. Ground Water Hydrology, John Wiley and sons, Inc, New York, 1976.
- 2. Raghunath, H.M., Ground Water, 2nd edition, Wiley Eastern Ltd., New Delhi, 1987.
- 3. Kessler J., Drainage Principles and Applications Vol. II and IV, International Institute of Land Reclamation and Improvement, Netherlands. 1979.
- 4. Ritzema H.P., Drainage Principles and Applications, Publication No. 16, International Institute of Land Reclamation and Improvement, Netherlands. 1994.
- 5. Bhattacharya A.K. and Michael A.M., Land Drainage Principles, Methods and Applications, Konark Publishers Pvt. Ltd., New Delhi. 2003.

OBJECTIVE:

- To provide an overall perspective to the students on the use of economic concepts in irrigation development.
- To impart knowledge on economic planning so as to enable viable allocation of resources in the irrigation sector

UNIT – I MEANING AND SCOPE

R

Meaning of irrigation economics – Scope of irrigation economics – Role of irrigation in economic development – Performance of agriculture in Indian economy: pre independent, post independent and post liberalisation scenario.

UNIT – II CONSUMPTION ECONOMICS

Q

Concept of demand and supply – Tools of economic analysis – Price determination – Demand and consumer behavior – Market analysis – Economic efficiency – Applications.

UNIT - III PRODUCTION ECONOMICS

10

Production economics – Conventional approach – Non-conventional approach – Cobb Douglas, Spillman and Constant Elasticity of Substitution production functions – Critical evaluation – Cost, revenue and profit maximization.

UNIT – IV FARM ECONOMICS

8

Concept of farm management – Farm records and budgeting – Whole farm and partial budgeting – Risk and uncertainty in farming – Case studies.

UNIT – I FINANCIAL ANALYSIS

10

Role of financial analysis – Central and State financing – Economic instruments: water charges, cess, taxes, subsidies and compensation - Irrigation water pricing - Concept and methods of irrigation water pricing - Discounting factors and techniques – Cost Benefit analysis of Irrigation Projects.

TOTAL: 45 PERIODS

- 1. Allan C. Deserpa, Micro-economic theory Issues and applications. Allyn and Bacon, Inc. Massachusetts. 1985.
- 2. Paul A. Samuelson and William D. Nordhaus, Economics. Tata McGraw-Hill Publishing Co. Ltd., New Delhi. 2002.
- 3. S.A.R. Bilgrami, An introduction to Agricultural Economics. Himalaya Publishing House, Mumbai. 2000.
- Douglas James L and Robert Lee, Economics of Water Resources Planning. Tata McGraw-Hill Publishing Co. Ltd., New Delhi. 1971.
- 5. Ronald D. Kay, Farm Management, Planning, Control and Implementation.McGraw-Hill Publishing Co. Ltd., New Delhi. 1981.

HW 9123 REMOTE SENSING AND GIS FOR WATER RESOURCES L T P 3 0 2

OBJECTIVE:

- To teach the principles and applications of remote sensing, GPS and GIS in the context of water resources.
- At the end of the course, the student will appreciate the importance of remote sensing and GIS in solving the spatial problems in water resources.

UNIT I REMOTE SENSING

8

Physics of remote sensing, electromagnetic radiation (EMR), Interaction of EMR with atmosphere, earth surface, soil, water and vegetation; Remote sensing platforms – Monitoring atmosphere, land and water resources - LANDSAT, SPOT, ERS, IKONOS and others, Indian Space Programme.

UNIT II DIGITAL IMAGE PROCESSING

8

Satellite Data analysis - Visual interpretation - Digital image processing - Image preprocessing - Image enhancement - Image classification - Data Merging.

UNIT III GEOGRAPHIC INFORMATION SYSTEM

9

Definition – Basic components of GIS – Map projections and co-ordinate system – Spatial data structure: raster, vector – Spatial Relationship – Topology – Geo database models: hierarchical, network, relational, object oriented models – Integrated GIS database -common sources of error – Data quality: Macro, Micro and Usage level components - Meta data - Spatial data transfer standards.

UNIT IV SPATIAL ANALYSIS

9

Thematic mapping – Measurement in GIS: length, perimeter and areas – Query analysis – Reclassification – Buffering - Neighbourhood functions - Map overlay: vector and raster overlay – Interpolation – Network analysis –Digital elevation modeling. Analytical Hierarchy Process, – Object oriented GIS – AM/FM/GIS – Web Based GIS

UNIT V WATER RESOURCES APPLICATIONS

11

Spatial data sources – 4M GIS approach – Thematic maps - Rainfall-runoff modeling – Groundwater modeling – Water quality modeling - Flood inundation mapping and Modeling – Drought monitoring – Cropping pattern change analysis –Performance evaluation of irrigation commands. Site selection for artificial recharge - Reservoir sedimentation.

GIS LABORATORY 30

GPS – Map projection – Transformation – Different data format – Creating spatial data – Attribute data entry – Spatial analysis – Reclassification – Overlay analysis – Interpolation – Digital Elevation Model.

TOTAL (L:45 + P:30): 75 PERIODS

HW 9124 SYSTEMS ANALYSIS IN WATER RESOURCES

L T P C 3 0 0 3

OBJECTIVE:

- Students will be introduced to application of systems concept to water resources planning and management.
- Optimization technique for modeling water resources systems and advanced optimization techniques to cover the socio-technical aspects will be taught.

UNIT I SYSTEM CONCEPTS

7

Definition, classification, and characteristics of systems - Scope and steps in systems engineering - Need for systems approach to water resources and irrigation.

UNIT I LINEAR PROGRAMMING

9

Introduction to operations research - Linear programming, problem formulation, graphical solution, solution by simplex method - Sensitivity analysis, application to design and operation of reservoir, single and multipurpose development plans - Case studies.

UNIT II DYNAMIC PROGRAMMING

9

Bellman's optimality criteria, problem formulation and solutions - Application to design and operation of reservoirs, Single and multipurpose reservoir development plans - Case studies.

UNIT IV SIMULATION

9

Basic principles and concepts - Random variant and random process - Monte Carlo techniques - Model development - Inputs and outputs - Single and multipurpose reservoir simulation models - Case studies.

UNIT ADVANCED OPTIMIZATION TECHNIQUES

11

Integer and parametric linear programming - Goal programming models with applications Discrete differential dynamic programming and incremental dynamic programming - Linear decision rule models with application - Stochastic dynamic programming models.

IW 9131 SOFT COMPUTING AND SIMULATION IN WATER RESOURCES

L T P C 3 0 0 3

OBJECTIVE:

- To develop in students, skills of software usage for water resources management.
- To enable the students to understand application of the latest information technology to water resources engineering

UNIT I COMPUTING TECHNIQUES

10

Computer methods in water resources - Algorithms and Flowcharts- Computing techniques - Solution to ordinary and partial differential equation using Finite difference and Method of Characteristics- Numerical integration and differentiation Design of digital models - Visual programming - Graphical user interface - Real computing -Interactive model concepts.

UNIT II ARTIFICIAL INTELLIGENCE

10

Heuristic search - Knowledge based Expert system concepts - Architecture and applications in Water Resources Management - Expert system shells - Principle of Artificial Neural Network (ANN) - Application of ANN Model to Hydrology and Crop Water Requirement model. Fuzzy Logic concepts and Applications – Genetic Algorithms

UNIT III DIGITAL DATA MANAGEMENT

10

Data base structure - Data acquisition - Data warehouse - Data retrieval-Data format Attribute - RDBMS - Data analysis - Network data sharing - Statistical Analysis (SYSTAT) - Regression - factor analysis - histogram - scatter diagram - Goodness of fit.

UNIT IV SIMULATION SOFTWARE IN WATER RESOURCES

8

Surface water models (HMS) - Storm Water Management Models (SWMM) - Water CAD, STORM CAD - Ground Water Flow models - Visual Modflow-FEFLOW

UNIT V SIMULATION MODELS IN IRRIGATION WATER MANAGEMENT 7

Soil moisture simulation models - Basin simulation models (MITSIM, VASIM, SIMYIELD) Real time operation models - Water Resources Information System, Management Information System.

IM 9152 WATERSHED CONSERVATION AND MANAGEMENT

L T P C 3 0 0 3

OBJECTIVE:

- To provide the technical know-how of analyzing the degradation of soil and water resources and implementation of the measures for soil and water conservation.
- To provide a comprehensive treatise on the engineering practices of watershed management for realizing the higher benefits of watershed management.

UNIT I WATERSHED CONCEPTS

7

Introduction – Significance – Geology – Soil – Morphological Characteristics – Elements – Land Capability Classification – Delineation – Codification – Factors Influencing Watershed Development

UNIT II SOIL CONSERVATION PRACTICE

9

Types of Erosion – Wind Erosion: Causes, Factors, Effects and Control – Water Erosion: Types, Factors, Effects – Engineering Measures for Erosion Control in Agricultural and Non-Agricultural Lands – Estimation of Soil Loss

UNIT III WATER HARVESTING AND CONSERVATION

9

Water Harvesting Techniques – Design of Small Water Harvesting Structures – Types of Storage Structures – Yield from a Catchment – Losses of Stored Water

UNIT IV WATERSHED MANAGEMENT

10

Strategies – Identification of Problems – Watershed Development Plan – Entry Point Activities — Concept of Priority Watersheds – Agroforestry – Grassland Management – Wasteland Management – Watershed Approach in Government Programmes – Developing Collaborative know how – People's Participation – Evaluation of Watershed Management

UNIT V WATERSHED ASSESSMENT MODELS

10

Regulation and Restoration – A Brief Description and Significance of Watershed Models: SWAT, TMDL, AGNPS, BASINS, CREAMS – Case Studies

TOTAL: 45 PERIODS

IW 9152

ENVIRONMENTAL IMPACT ASSESSMENT OF WATER RESOURCES DEVELOPMENT

L T P C 3 0 0 3

OBJECTIVE:

 To expose the students to the need, methodology, documentation and usefulness of environmental impact assessment in water resources development.

UNIT I ENVIRONMENTAL ISSUES

7

Water resources development and environmental issues – Environment in water resources project planning – Environmental regulations and requirements – The EIA (Environmental Impact Assessment) notification.

UNIT II EIA FUNDAMENTALS

R

Environmental Impact Assessment (EIA) – Environmental Impact Statement – EIA in Project Cycle – Legal and Regulatory aspects in India according to Ministry of Environment and Forests – Types and limitations of EIA – Cross sectoral issues and terms of reference in EIA –Participation of Public and Non-Governmental Organizations in environmental decision making

UNIT III ENVIRONMENTAL IMPACTS

10

Hydrological and water quality impacts – Ecological and biological impacts – Social and cultural impacts – Soil and landscape changes – Agro economic issues – Human health impacts – Ecosystem changes.

UNIT IV METHODS OF EIA

10

EIA team formation – Development of scope, mandate and study design – Base line survey – Check lists – Ad hoc procedures – Network and matrix methods – Semi-quantitative methods – ICID checklist – Economic approaches – Environmental Impact Statement (EIS) preparation.

UNIT V ENVIRONMENTAL MANAGEMENT

10

In-stream ecological water requirements - Public participation in environmental decision making - Sustainable water resources development - Ecorestoration - Hydrology and global climate change - Human ecology - Ecosystem services - Environmental monitoring programs.

IW 9153 REHABILITATION AND MODERNISATION OF IRRIGATION SYSTEMS

L T P C 3 0 0 3

OBJECTIVE:

 To expose the students to the need and importance of the rehabilitation and modernization of irrigation systems and to train them in the related concepts and methods.

UNIT I IRRIGATION SYSTEMS

9

Historical evolution of irrigation systems in India; its importance to agricultural production. Irrigation system classification – Nature of system modernization and rehabilitation. Distinction between rehabilitation and modernization; Rehabilitation and modernization objectives – Theory and Practice.

UNIT II SYSTEM MAINTENANCE

9

Maintenance: essential, catch up, preventive and normal – Diagnostic analysis of flow, seepage and other parameters through Participatory Rural Appraisal, Rapid Rural Appraisal and Walk-through Survey – Development and maintenance programme – Kudimaramath – Turnover – WUA.

UNIT III PROBLEM IDENTIFICATION

9

System performance: history of inflow, cropping pattern, system alterations, distribution performance – Operational constraints – Management constraints – Resources constraints

UNIT IV REHABILITATION

9

Baseline survey – Deferred maintenance – Causes – Criteria used for taking rehabilitation programmes – Software and hardware improvements – Prioritization – Role of water users' association – Monitoring and evaluation.

UNIT V IMPLEMENTATION

9

Rehabilitation and modernization programmes – Periyar Vaigai Project – Walawe Project – Tank Modernization Project – Water Resources Consolidation Project. IAM WARM Project.

TOTAL: 45 PERIODS

- 1. CWR, Baseline Survey of Irrigation Commands, Centre for Water Resources, Anna University, Chennai. 2000.
- 2. IIMI and WALMI, The Case of Mahi Kadana, WALMI, Gujarat, India, 1994.
- 3. CSU, Diagnostic Analysis of Irrigation Systems Volume 2: Evaluation Techniques. Water Management Synthesis Project, Colorado State University, USA. 1984.
- 4. WAPCOS, Technical Report No. 19-A, Handbook for Improving Irrigation System Maintenance Projects, WAPCOS, New Delhi. 1989
- 5. CWR, Tank Modernization Project EEC Assistance: Monitoring and Evaluation. Final Reports. Centre for Water Resources, Anna University, Chennai. 2000.
- 6. CWR, Planning and Mobilization of Farmers Organization and Turnover. Tamil Nadu Water Resources Consolidation Project. CWR and OM, Anna University, Chennai. 1997

OBJECTIVE:

- To stress the importance of micro irrigation methods, design and operation of sprinklers and drip irrigation methods
- To emphasise current developments in fertigation methods, the adoption of micro irrigation in field and the economic aspects of management

UNIT I INTRODUCTION TO MICRO-IRRIGATION

7

Importance – classification of irrigation methods – classification of micro-irrigation methods – principles and selection of micro-irrigation systems – low pressure mini spray systems – bubbler system – sprinkler and drip system – irrigation efficiencies.

UNIT II SPRINKLER IRRIGATION SYSTEM AND DESIGN

10

Development – Use – Types – Portable, Semi portable and Permanent systems – Components – pumping – Main line – Lateral line – Sprinkler heads – Moisture distribution pattern and uniformity of coverage – Testing of water distribution pattern – Design of Sprinkler irrigation systems – Types of system and layout - Selection and spacing – Capacity of sprinkler system – Hydraulic design – Design of laterals – Cost estimation – Operation and Maintenance – trouble shooting – Application of Fertilizers – Fertilizer injection methods and Devices.

UNIT III DRIP IRRIGATION SYSTEM, DESIGN AND LAYOUT

10

Drip effect on water use – description of drip irrigation system – types – various methods – manufacturing drip equipments – low and high density polythene – main pipe – submains – laterals – emitters – dripper with hole and socket – micro tube emitters – nozzles – self adjusting drippers – double wall pipe – leaky pipe. Principles for design of drip system – hydraulic formulae Darcy Weishbach equation – Hazen Williams formulae – factors to be consider to the design of the system – design procedure –design of emitters, laterals, submains and main lines – head works – drip layout for different crops – field crops – close spaced crops – orchard crops – drip irrigation design and layout – model design.

UNIT IV WATER DISTRIBUTION AND FERTILIZER APPLICATION IN DRIP IRRIGATION

10

Effects of discharge rate of drip emitter – water movement under drip system – soil moisture distribution – soil water content – drainage flux – irrigation control by soil physical methods - Clogging – water quality and preventive measures – cleaning of clogged system – filtration problems and measures – gravel filters – vortex filters – other methods of filtering and prevention – clogging of outlets. Introduction and list of fertilizers – application of fertilizer – influence on general nutritional problems – fertilizers movement – fertilizing – existing fertilizer practices – continuous fertilizers – methods of applying fertilizers – volume of fertilizer tank – dilution ratio.

UNIT V ECONOMICS AND ADOPTION OF DRIP IRRIGATION IN INDIA

8

Adoption and Up scaling - Constraints for the farmers - Irrigation investment - possible economics in drip system - engineering design - Agronomic manipulation - commercial production - factors influencing economics of drip system - cost estimates - optimum farm size - economics and financial analysis - present status and application in India with special focus on Tamil Nadu state.

TOTAL: 45 PERIODS

- 1. R.K.Sivanappan., Drip Irrigation, Keerthi Publishing House (P) Ltd., 1999.
- 2. Dilip Kumar Majumdar., Irrigation Water Management, Prentice Hall Inc., 2004.
- 3. A.M.Michel., Irrigation (Theory and Practice), Vikas Publishing House, 2008.

UNIT I IRRIGATION DEVELOPMENT IN INDIA

9

Historical evolution of irrigation in India – Irrigation development during pre-colonisation – Colonisation and post-colonization – Irrigation management – the command area development approach and farmers' participation – Irrigation data-base.

UNIT II IRRIGATION SYSTEMS AND PERFORMANCE INDICATORS 9

Systems classification – Rehabilitation and modernization – Performance indicators – Improving system performance – Conjunctive management – constraints faced.

UNIT III MAIN SYSTEM MANAGEMENT

9

Main system components – Reservoir allocation rule, Operating rule and optimization methods to improve main system performance - irrigation scheduling – Constraints.

UNIT IV COMMAND AREA DEVELOPMENT AND PARTICIPATORY IRRIGATION MANAGEMENT:

Command area development principles – Participatory Irrigation Management and Irrigation management transfer – Case studies – Constraints.

UNIT V IRRIGATION INSTITUTIONS AND POLICY:

9

9

Present status of irrigation institutions and organizations – Irrigation related conflicts – Institutional transformation needed – Constraints in effecting institutional transformation – Irrigation financing – Water pricing – Water market – Policy changes needed.

TOTAL: 45 PERIODS

- 1. "Ramesh Hooja, Management of Water for Agriculture Irrigation, Water sheds and Drainage" Rawat Publications, New Delhi.
- 2. Kijne, J.W., Barker, R and Molden, D , "Water Productivity in Agriculture; Limits and Opportunities for improved" CABI Publishing, Walling ford, U.K, 2003.

IW 9155 WATER QUALITY AND POLLUTION

L T P C

OBJECTIVE:

- This course introduces water quality concepts, its estimation and evaluation for irrigation purposes, besides relevant environmental problems and modeling of non-point pollution sources.
- At the end of the course, the students will understand the importance of water quality for irrigation and environment and the collection and use of water quality data.

UNIT I WATER QUALITY

10

Physical and chemical properties of water – Suspended and dissolved solids – EC and pH – Trace constituents – Principles of water quality. - Water quality investigation – Sampling design - samplers – automatic samplers - data collection platforms – Field kits and investigations – Water quality data storage, analysis and inference – Software packages

UNIT II IRRIGATION WATER QUALITY

10

Water quality standards – Water quality for irrigation – Salinity and permeability - Irrigation practices for poor quality water – Waste water irrigation: problems and prospects – Saline water irrigation – Future strategies - Water quality indices

UNIT III SOURCES OF WATER POLLUTION

10

Leaching of agrochemicals – Domestic sewage – characteristics – Water pollutants from industries – Dissolved oxygen sag curve - Non Point Source (NPS) models – Agricultural Non Point Source (AGNPS) pollution model.

UNIT IV WATER POLLUTION ABATEMENT TECHNOLOGIES

7

Flow diagram and working principle of Activated sludge process, Trickling filter – Oxidation pond – Aerated lagoons – Advantages disadvantages and suitability – Packaged treatment units, advantages, disadvantages – Reverse osmosis

UNIT V RECYCLING AND REUSE OF WASTEWATER

8

Reuse of wastewater in agriculture – prevalence and issues from around the world – Pretreatment technologies – Removal of nutrients from treated water – Economic and social dimensions. – Constructed wetlands – reed beds

Determination of following water quality parameters as per standard methods. Turbidity, Solids, pH, Alkalinity, Hardness, Chlorides, Sulphates, Nitrates, Na, K, MPN, BOD and COD - Evaluation of water quality.

TOTAL (L: 45+P: 30): 75 PERIODS

- 1. George Tchobanoglous, Franklin Louis Burton, Metcalf & Eddy, H. David Stense, Wastewater Engineering: Treatment and Reuse, McGraw-Hill, 2002.
- 2. Mackenzie L Davis, David A Cornwell, Introduction to Environmental Engineering, McGraw-Hill 2006.

- 5. Sithamparanathan, J., Rangasamy, A. and Arunachalam, N., Ecosystem principles and sustainable agriculture, Scitech Publishers, Chennai, 1999.
- 6. US EPA, APHA, AWWA, Standard methods for the examination of water and wastewater, 19th edition, 2003.

OBJECTIVE:

- To enable the understanding which seeks to improve gender relations and roles and how they affect and are affected by water.
- To improves the understanding and awareness of gender concepts through an easy reference to existing materials and tools.

UNIT I A RETROSPECTION

7

Define Gender – Origin in Sociology – Sociological Perspectives - Historical Framework -Gender and Early Sociological thought – Roles and Social Stratification.

UNIT II GENDER AND INTEGRATED WATER RESOURCES MANAGEMENT

Q

Gender Issues in Drinking and Domestic Water Supply, Sanitation and Hygiene — Water Shed Management – Protection of fresh Water Resources- Water Privatization – Legal Frameworks.

UNIT II GENDER AND IRRIGATION WATER MANAGEMENT

Irrigation – Water User's Association –Types and Levels of Operation and Organisation in irrigation System- User roles in irrigation Management – Role of Community Organiser – The context of Participation

UNIT IV GENDER COMPETENCY ISSUES IN WATER

10

Impacts in Water Sector: Globalisation- Global Warming- Liberalisation - Water Rights - Equity Issues in Water -Poverty Alleviation - Gender and Capacity Building-- Gender Analysis Tools - Mainstreaming gender in Water Management - A sustainability perspective.

UNIT V GENDER MAINSTREAMING – CASE STUDIES

10

Programme and Project Identification- Formulating Programmes and Projects-Implementations- Monitoring and Evaluation – Case Studies from South Asian and global Context.

TOTAL: 45 PERIODS

- 1. Global Perspectives on Integrated Water Resources Management : A Resource Kit Vasudha Pangare, et. al Academic Foundation, 2006
- 2. Together for Water and Sanitation: Tools to apply a gender approach. The Asian Experience, Edited by Eveline Bolt. 1994.
- 3. Managing Water Resources, Policies, Institutions, and Technologies (Ed): V. Ratna Reddy and S., Mahendra Dev. Oxford University Press, 2006.

IM 9103 WATER AND ECOSYSTEMS

L T P C 3 0 0 3

OBJECTIVE:

 To introduce the principles of natural ecosystems, the social dimensions and approaches to water, the benefits to the society and the need for conservation of ecosystems.

UNIT I PRINCIPLES OF ECOLOGY

8

Levels of organization - Concept of Ecosystems - Ecosystem structure and function - Freshwater ecosystems - Ecological resources - Ecosystem models.

UNIT II AQUATIC ECOSYSTEMS

8

Ecosystem processes – Agricultural vs Ecosystem productivities – Riparian processes and interactions – Ecohydrology and impacts of human alterations – Water-food-ecosystem linkages.

UNIT III ECOSYSTEM SERVICES

9

Water for irrigation – Livelihoods – Industrial / developmental needs – domestic use – drinking water demands – Green vs Blue water – Human well-being and future freshwater challenges – Economic instruments.

UNIT IV ACCESS AND EQUITY

10

Water sector development – Water access and equity – Gender dimensions - Adjusting to water scarcity – Water allocation principles - Upstream-downstream perspectives – Institutions and democracy.

UNIT V ECOSYSTEM MANAGEMENT

10

Ecosystem assessments – Environmnetal flows - Virtual water and trade - Eco tourism - Stakeholder participation – Social and political conditions of water use - Sustainable Ecosystems - Environmental governance.

TOTAL: 45 PERIODS

- 1. Malin Falkenmark and Johan Rockstrom, Balancing water for Humans and Nature, Earthscan, VA, USA, 2005.
- 2. Caroline M Figueres, Cecilia Tortajada and Johan Rockstrom (ed), Rethinking Water Management, EarthScan, VA, USA, 2005.
- 3. Eugene P Odum, Basic Ecology, Holt-Saunders International Edition, Philadelphia, US, 1983.
- 4. Gerhard Lichtenthaler, Political Ecology and the role of Water, Ashgate Publishing Ltd, Hampshire, UK, 2004.
- 5. Mike Acreman, Water and Ethics : Water and Ecology, UNESCO-IHP, Paris, France, 2004.

OBJECTIVE:

- Understanding the climate system, being aware of the impact of climate change on society, Understanding of adaptation in relation to water and climate change.
- At the end of the course, students must be in a position to describe the possible impacts, adaptations and remedies in relation to water resources and climate change.

UNIT I EARTH'S CLIMATE SYSTEM.

10

Introduction -Climate in the Spotlight -The Spectrum of Scientific Opinion, -The Earth's Natural Greenhouse Effect - The Importance of Water - Greenhouse Gases-The Role of Carbon Dioxide, The Earth's Carbon Reservoirs, Carbon Cycling-Climate and Weather - The Earth's Climate Machine - Global Wind Systems -Trade Winds and the Hadley Cell,-The Highs and Lows of the Westerlies, -The Vital Importance of Monsoon Rains, Clouds, Storms and Climate -Cloud Formation and Climate,-Hurricanes and Global warming - Global Ocean Circulation - El Niño and its Effects,

UNIT – II OBSERVED AND PROJECTED CHANGES IN CLIMATE AS THEY RELATE TO HYDROLOGY

9

Precipitation (including extremes) - water vapour - Snow and land ice - Sea level - Evapotranspiration - Soil moisture - Runoff and river discharge - Patterns of large-scale variability - Influences and feedbacks of hydrological changes on climate - Land surface effects - Feedbacks through changes in ocean circulation - Emissions and sinks affected by hydrological processes - Projected changes in climate - Patterns of large-scale variability.

UNIT – III IMPACTS AND RESPONSES

10

Observed climate change impacts - effects due to changes in the cryosphere - Future changes in water availability and demand due to climate change - Climate-related drivers of freshwater systems in the future - Impacts of climate change on water stress in the future - Impacts of climate change on costs and other socio-economic aspects of freshwater - Freshwater areas and sectors highly vulnerable to climate change - Uncertainties in the projected impacts of climate change on freshwater systems.

UNIT – IV CLIMATE CHANGE ADAPTATION

8

Water-related adaptation to climate change in the fields of Ecosystems and biodiversity, - Agriculture and food security, land use and forestry, Human health, water supply and sanitation, infrastructure and Economy (insurance, tourism, industry and transportation) - Adaptation, vulnerability and sustainable development

Sector-specific mitigation - Carbon dioxide capture and storage (CCS) , Bio-energy crops, Biomass electricity, Hydropower, Geothermal energy, Energy use in buildings, Land-use change and management, Cropland management, Afforestation and Reforestation, - Effects of water management policies and measures on GHG emissions and mitigation - Potential water resource conflicts between adaptation and mitigation - Implications for policy and sustainable development.

TOTAL: 45 PERIODS

- 1. IPCC fourth assessment report The AR4 synthesis report, 2007
- 2. IPCC fourth assessment report –Working Group I Report, "The physical Science Basis", 2007
- 3. IPCC fourth assessment report Working Group II Report, "Impacts, Adaptation and Vulnerability", 2007
- 4. IPCC fourth assessment report Working Group III Report" Mitigation of Climate change", 2007
- 5. Bates, B.C., Z.W. Kundzewicz, S. Wu and J.P. Palutikof, Eds., 'Climate Change and Water'. Technical Paper of the Intergovernmental Panel on Climate Change, IPCC Secretariat, Geneva, 2008.
- 6. Jan C. van Dam, Impacts of Climate Change and Climate Variability on Hydrological Regimes, Cambridge University Press, 2003.

L T P C 3 0 0 3

OBJECTIVE:

- To understand how the policies, laws and judicial approaches tackle the recent water issues.
- To help formulate recommendations/responses that could resolve/avoid disputes.
- To emphasize water as a finite common property resource that must be used in public interest.

UNIT I WATER RIGHTS: DOCTRINES/PRINCIPLES

9

Introduction – Policy, Law, Bill, Act, Rules, Notifications – Nature of Rights: Natural Rights – Customary Rights – Doctrine of Riparian Rights – Doctrine of Prior Appropriation – Doctrine of Equality – Doctrine of Equity – Absolute Ownership Theory

UNIT II WATER IN INDIAN CONSTITUTION AND OTHER STATUTES 9 History of Water Laws in India: Pre-Constitutional Water Laws – Constitutional Provisions: Article 14, Article 21, Directive Principles of State Policy, Fundamental

Provisions: Article 14, Article 21, Directive Principles of State Policy, Fundamental Duties, State List-Entry 17 – 73rd and 74th amendments, Article 262 – Water Conflicts and Tribunals – Post-Constitutional Water Laws – National-Level Enactments.

UNIT III WATER LAWS: SURFACE WATER AND GROUNDWATER

Overview of State Acts with Case Laws: Irrigation: The Indian Easements Act – Land-Related Legislation –Tanks – Irrigation Management – Cess – Protection of Water Sources – Groundwater – Drinking and Domestic Water Supply – Industrial Use – Water Pollution – Torts and Crimes

UNIT IV POLICIES GOVERNING WATER

9

National Water Policy – National-Level Commissions – Irrigation Management Transfer Policies and Activities – Legal Registration of WUAs – Legal Changes in Water Allocation, Resource Mobilization and Dispute Resolution – Role of Local Institutions – Community Based Organizations – Water Policy Reforms: India, the Philippines, Bangladesh, and Indonesia

UNIT V TRANSNATIONAL LEGAL SYSTEM

9

International Law Commission – International Treaties and Protocols – Transboundary Water Conflicts: Indus Waters Treaty – India-Nepal Treaty – Indo-Bangladesh Cooperation – Sharing of Nile and Mekong River Basins

IM 9122 FIELD RESEARCH METHODOLOGY

L T P C 2 0 2 3

OBJECTIVE:

 To teach interdisciplinary field research skills to enable students design field experiments, collect and analyze data and make inferences.

UNIT I INTERDISCIPLINARY RESEARCH

8

Types of Research - Inter-disciplinarity and multi-disciplinarity in research; Tools and techniques: Socio-economic, Hydrological, Physico-chemical and Agro-ecological investigations – Research Design – Hypotheses – Types of data.

UNIT II QUALITATIVE METHODS

7

PRA and RRA Tools – Field observation and evaluation - stakeholder perceptions - Stakeholder analysis -, stakeholder diagramming - Integrated research concept development: SPQR - Research questions - Research Ethics - Research execution in the field

UNIT III SEMI QUANTITATIVE METHODS

7

Sources of secondary data – Primary field surveys – Design and construction of questionnaire – Administration of questionnaire – Collation of data.

UNIT IV STATISTICAL INFERENCE

8

Data editing and data transformations – Grouping variables – descriptive and graphical analysis – Correlation and Regression – ANOVA– Non Parametric tests – Multi-variate analysis – SYSTAT package

UNIT V FIELD WORK

30

Conduct of a case study – PRA and RRA Tools – Training in concept and Methods of field research.

TOTAL (L: 30+P: 30): 60 PERIODS

- 1. Wilkinson and Bhandarkar, Methodology and Techniques of Social Research, 17 Ed., Himalaya Publishing House, 2004.
- 2. Creswell, J. W., Research Design, Sage Publications India, New Delhi, 2008.

- 5. Norman, D W, F D Siebert, and E Modiakgotla, The Farming Sytems Approach to Development and Appropriate Technology Generation, FAO, Rome, 1995.

OBJECTIVE:

 The main purpose of coastal engineering is to protect harbors and improve navigation. The students to the diverse topics as wave mechanics, wave climate, shoreline protection methods and laboratory investigations using model studies.

UNIT – I INTRODUCTION TO COASTAL ENGINEERING 6 Introduction - wind and waves – Sea and Swell - Introduction to small amplitude wave theory – use of wave tables- Mechanics of water waves – Linear (Airy) wave theory.

UNIT - || WAVE PROPERTIES AND ANALYSIS

7

Introduction to non-linear waves and their properties – Waves in shallow waters – Wave Refraction, Diffraction and Shoaling –Hindseast wave generation models, wave shoaling; wave refraction; wave breaking; wave diffraction random and 3D waves- Short term wave analysis – wave spectra and its utilities - Long term wave analysis- Statistics analysis of grouped wave data.

UNIT – III COASTAL SEDIMENT TRANSPORT

10

Dynamic beach profile; cross-shore transport; along shore transport (Littoral transport), sediment movement

UNIT – IV COASTAL DEFENSE

11

Field measurement; models, groins, sea walls, offshore breakwaters, artificial nourishment - planning of coast protection works - Design of shore defense structures - Case studies.

UNIT – V MODELING IN COASTAL ENGINEERING

11

Physical modeling in Coastal Engineering – Limitations and advantages – Role of physical modeling in coastal engineering – Numerical modeling – Modeling aspects – limitations – Case studies using public domain models.

TOTAL: 45 PERIODS

- 1. Dean, R.G. and Dalrymple, R.A., Water wave mechanics for Engineers and Scientists, Prentice-Hall, Inc., Englewood Cliffs, New Jersey, 1994.
- 2. Ippen, A.T., Estuary and Coastline Hydrodynamics, McGraw-Hill Book Company, Inc., New York, 1978.

HW 9156 WATER SUPPLY DISTRIBUTION AND BURIED PIPES L T P C 3 0 0 3

OBJECTIVE:

 To educate the students in detailed design concepts related to water transmission mains, water distribution system and buried pipes with emphasis on computer application

UNIT I WATER SUPPLY SYSTEMS

9

Water requirement – sources of water – water demand – reservoir storage – nodal hydraulic gradient level values - water supply consideration, Types of water supply systems- piping system- distribution network- labeling- network components – Network models – design – optimization in practice

UNIT II HYDRAULIC PRINCIPLES AND NETWORK PARAMETERS 10

Energy and hydraulic gradient lines – head loss in links – equivalent pipes – series – parallel pipes – path head loss and loop head loss – analysis of water distribution network- static node, dynamic node – network performance – flow analysis - Layout – in situ lining - pipes material – appurtenances – minimization of water losses – leak detection.

UNIT III STORM WATER DISTRIBUTION AND BURIED PIPES

Planning – runoff estimation – rainfall data analysis – storm water drain design Introduction to Buried pipes – external loads – gravity flow design, pressurized flow- rigid and flexible pipes – installation – trenchless technology

UNIT IV RELIABILITY ASSESSMENT AND DESIGN

8

10

Uncertainty and reliability – affecting events- assessment – reliability parameters-configurations. Design methodology - strengthening and expansion

UNIT V SOFTWARE APPLICATIONS

8

Use of software in water transmission, water distribution and sewer design – LOOP 4.0, SEWER, EPANET, BRANCH, SEWERCAD, WATERCAD, STROMNET

TOTAL: 45 PERIODS

- 1. Bhave P. R, Optimal design of water distribution networks, Narosa publishing House, New Delhi, 2003
- Bajwa. G. S, Practical handbook on Public Health Engineering, Deep publishers, Shimla 2003
- 3. Manual on water supply and treatment, CPHEEO, Ministry of Urban Development, GOI, New Delhi, 1999

HW 9157 RIVER ENGINEERING

L T P C 2 0 2 3

OBJECTIVE:

- To understand theoretical concepts of water and sediment movements in rivers
- To inculcate the benefits of fluvial system to the society

UNIT I RIVER FUNCTIONS

8

Primary function of a river – River morphology – River uses and measures – Water and Sediment loads of river – Rivers in India, Himalaya and Peninsular.

UNIT II RIVER HYDRAULICS

10

Physical Properties and Equations – Steady flow in rivers – uniform and non uniform – Turbulence and velocity profiles – resistance co-efficients – Boundary conditions and back waters – Transitions – Rating Curve – Unsteady flow in rivers : Propagation of surface waves – Characteristics, flood waves – kinematic and diffusion analogy – velocity of propagation of flood waves.

UNIT III RIVER MECHANICS

9

River Equilibrium: Stability of Channel – regime relations – river bend equilibrium – hydraulic geometry of downstream – Bars and meandering – River dynamics – degradation and aggradation of river bed – Confluences and branches – River Data base.

UNIT IV RIVER SURVEYS AND MODEL

9

Mapping – Stage and Discharge Measurements – Sediments – Bed and suspended load – Physical hydraulic Similitude – Rigid and mobile bed – Mathematical – Finite difference one dimensional – multi-dimensional – Water Quality and ecological model

UNIT V RIVER MANAGEMENT

9

River training works and river regulation works – Flood plain management – waves and tides in Estuaries – Interlinking of rivers – River Stabilization

TOTAL: 45 PERIODS
