

**DEPARTMENT OF ELECTRICAL AND ELECTRONICS ENGINEERING  
ANNA UNIVERSITY, CHENNAI – 25**

**VISION OF THE INSTITUTE**

The vision of Anna University is to be a world-class institution by producing professionals with high technical knowledge, professional skills and ethical values, and remain a preferred partner to the industry and community for their economic and social development through excellence in teaching, research and consultancy. Anna University shall be recognized as a point of reference, a catalyst, a facilitator, a trend setter and a leader in technical education.

**MISSION OF THE INSTITUTE**

Anna University shall contribute to the educational, economic and social development by

- Producing students who are intellectually and technically equipped with well defined knowledge, skills and ethics, who are creative thinkers, inspiring leaders and contributing citizens
- Introducing high quality academic and research programmes and providing extension services in cutting edge technologies
- Ensuring a supportive campus climate with dynamic leadership and development opportunities to meet the needs of the students, faculty and staff
- Enhancing academic productivity through induction of quality faculty, accelerated graduation, credit banking, augmented continuing education opportunities and adoption of current technology
- Sharing the intellectual resources and the infrastructural facilities among the academia from other institutions and among the industrial society, funding agencies and government
- Enhancing the collaborative partnership between Industry and Institute for commercializing and transferring the latest technological know-how towards societal development
- Setting up a Global University Network Campus that embodies the ideals of an open, democratic and global society catering to the needs of the global community and satisfying cultural, ethnic and racial diversity
- Expanding global participation spread across continents with the aid of interactive satellite based education and the usage of digital library
- Enriching the national and international character of the University
- Ensuring efficient administrative coordination and effective decision making through necessary reforms and by strategically allocating resources
- Benchmarking against technologically sound global leaders with a view towards continuous improvement.

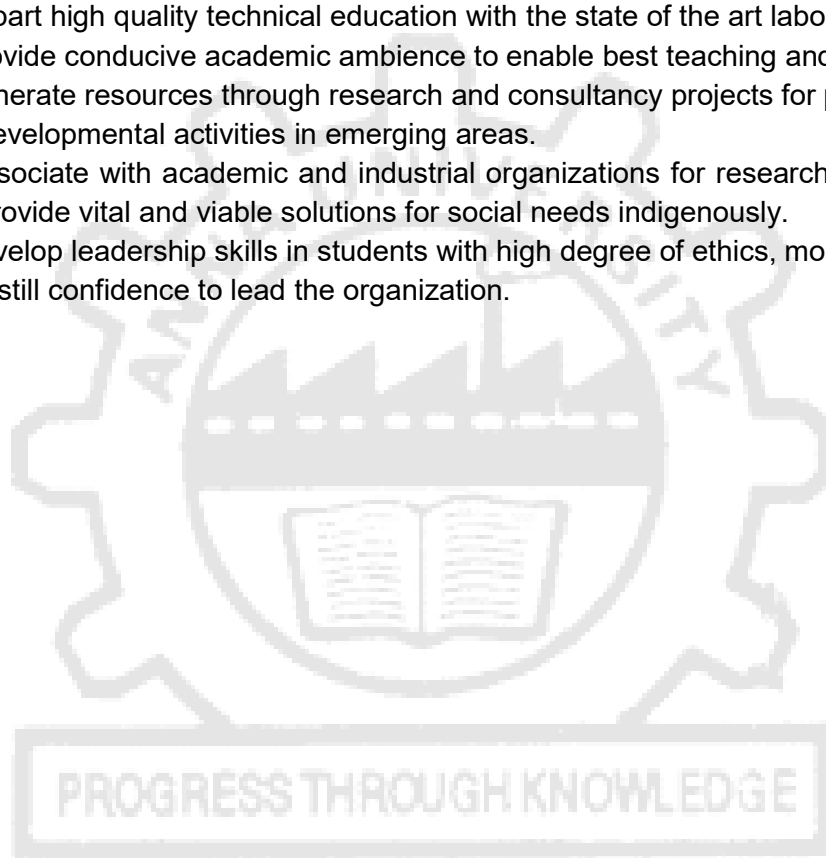

*Attested*

## VISION OF THE DEPARTMENT

The vision of the department is to produce analytically proficient and technologically competent Electrical and Electronics Engineers who can serve and take forward the academic, industry and research organizations to newer heights and be effective for building the nation.

## MISSION OF THE DEPARTMENT

- M1:** To impart high quality technical education with the state of the art laboratory practice.
- M2:** To provide conducive academic ambience to enable best teaching and learning processes.
- M3:** To generate resources through research and consultancy projects for pursuing research and developmental activities in emerging areas.
- M4:** To associate with academic and industrial organizations for research activities to develop and provide vital and viable solutions for social needs indigenously.
- M5:** To develop leadership skills in students with high degree of ethics, morals and values and instill confidence to lead the organization.

*Attested*

**ANNA UNIVERSITY, CHENNAI**  
**UNIVERSITY DEPARTMENTS**  
**B.E. ELECTRICAL AND ELECTRONICS ENGINEERING**  
**REGULATIONS – 2019**  
**CHOICE BASED CREDIT SYSTEM**

**1. PROGRAMME EDUCATIONAL OBJECTIVES (PEOs):**

- I. Find employment in Core Electrical and Electronics Engineering and service sectors.
- II. Get elevated to technical lead position and lead the organization competitively.
- III. Enter into higher studies leading to post-graduate and research degrees.  
Become consultant and provide solutions to the practical problems of core organization.
- IV. Become an entrepreneur and be part of electrical and electronics product and service industries.

**2. PROGRAMME OUTCOMES (POs):**

After going through the four years of study, our Electrical and Electronics Engineering Graduates will exhibit ability to:

<b>PO#</b>	<b>Graduate Attribute</b>	<b>Programme Outcome</b>
1	Engineering knowledge	Apply knowledge of mathematics, basic science and engineering science.
2	Problem analysis	Identify, formulate and solve engineering problems.
3	Design/development of solutions	Design an electrical system or process to improve its performance, satisfying its constraints.
4	Conduct investigations of complex problems	Conduct experiments in electrical and electronics systems and interpret the data.
5	Modern tool usage	Apply various tools and techniques to improve the efficiency of the system.
6	The Engineer and society	Conduct themselves to uphold the professional and social obligations.
7	Environment and sustainability	Design the system with environment consciousness and sustainable development.
8	Ethics	Interacting industry, business and society in a professional and ethical manner.
9	Individual and team work	Function in a multidisciplinary team.
10	Communication	Proficiency in oral and written Communication.
11	Project management and finance	Implement cost effective and improved system.
12	Life-long learning	Continue professional development and learning as a life-long activity.

*Attested*

### 3. PROGRAM SPECIFIC OUTCOMES (PSOs):

By the completion of Electrical and Electronics Engineering program the student will have following Program specific outcomes.

1. Foundation of Electrical engineering: Ability to understand the principles and working of electrical components, circuits and systems, that are forming a part of power generation, transmission, distribution, energy saving. Students can assess the power management, auditing, crisis and saving aspects.
2. Foundations of power system development: Ability to understand the structure and development methodologies of electrical systems using knowledge on circuits, electronics for automation and control. Possess professional skills and knowledge of electrical system modeling and design of small and large systems. Familiarity and practical competence with a broad range of practice through experimentation on electrical circuits, electronic circuits and programming platforms.
3. Foundation of mathematical concepts: Ability to apply mathematical methodologies to solve computation task, model real world problem using appropriate engineering tools and suitable algorithm.
4. Applications of Computing and Research Ability: Ability to use knowledge in various domains to identify research gaps and hence to provide solution leading to new ideas and innovations.

### 4. PEO / PO Mapping:

*Attested*

**OBJECTIVES:**

The first semester English course entitled 'Technical English' aims to,

- Familiarise first year students of engineering and technology with the fundamental aspects of technical English.
- Develop all the four language skills by giving sufficient practice in the use of the skills in real life contexts.
- Enhance the linguistic and communicative competence of first year engineering and technology students.

**UNIT I INTRODUCING ONESELF****12**

**Listening:** Listening and filling a form, listening to speeches by specialists from various branches of engineering and completing activities such as answering questions, identifying the main ideas of the listening text, style of the speaker (tone and tenor) – **Speaking:** Introducing oneself -introducing friend/ family - **Reading:** Descriptive passages (from newspapers / magazines)- **Writing:** Writing a paragraph (native place, school life)- **Grammar:** Simple present, present continuous – **Vocabulary Development:** One word substitution

**UNIT II DIALOGUE WRITING****12**

**Listening:** Listening to conversations (asking for and giving directions) -**Speaking:** making conversation using (asking for directions, making an enquiry), Role plays-dialogues- **Reading:** Reading a print interview and answering comprehension questions-**Writing:** Writing a checklist, Dialogue writing- **Grammar:** Simple past – question formation (Wh- questions, Yes or No questions, Tag questions)- **Vocabulary Development:** Stress shift, lexical items related to the theme of the given unit.

**UNIT III FORMAL LETTER WRITING****12**

**Listening:** Listening to speeches by famous people and identifying the central message of the speech – answering multiple-choice questions)-**Speaking:** Giving short talks on a given topic- **Reading:** Reading motivational essays on famous engineers and technologists (answering open-ended and closed questions) - **Writing:** Writing formal letters/ emails (Complaint letters)-**Grammar:** Future Tense forms of verbs, subject and verb agreement-**Vocabulary Development:** Collocations – Fixed expressions

**UNIT IV WRITING COMPLAINT LETTERS****12**

**Listening:** Listening to short talks (5 minutes duration and fill a table, gap-filling exercise) note taking/note making- **Speaking:** Small group discussion, giving recommendations-**Reading:** Reading problem - solution articles/essays drawn from various sources- **Writing:** Making recommendations - Writing a letter/ sending an email to the Editor- note making- **Grammar:** Modals – Phrasal verbs – cause and effect sentences- **Vocabulary Development:** Connectives, use of cohesive devices in writing, technical vocabulary.

**UNIT V WRITING DEFINITIONS AND PRODUCT DESCRIPTION****12**

**Listening:** Listening to a product description (labeling and gap filling) exercises- **Speaking:** Describing a product and comparing and contrasting it with other products- **Reading:** Reading graphical material for comparison (advertisements)-**Writing:** Writing Definitions (short and long) – compare and contrast paragraphs- **Grammar:** Adjectives – Degrees of comparison - compound nouns- **Vocabulary Development:** Use of discourse markers - suffixes (adjectival endings).

*Attested***TOTAL: 60 PERIODS**

## COURSE OUTCOMES:

After completion the above subject, students will be able to understand

CO1: Exposure to basic aspects of technical English.

CO2: The confidence to communicate effectively in various academic situations.

CO3: Learnt the use of basic features of Technical English.

CO4: Small group discussions and note making

CO5: Listening to a product description, reading and writing

### Textbook:

1. Revised Edition of 'English for Engineers and Technologists' Volume 1 published by Orient Black Swan Limited 2019.

### Assessment Pattern

- Assessments will assess all the four skills through both pen and paper and computer based tests.
- Assessments can be pen and paper based, quizzes.

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PS01	PS02	PS03	PS04
CO1						3	3	3	3	3		3				
CO2						3	3	3	3	3		3				
CO3						3	3	3	3	3		3				
CO4						3	3	3	3	3		3				
CO5						3	3	3	3	3		3				
Avg						3	3	3	3	3		3				

MA5158

**ENGINEERING MATHEMATICS – I**  
(Common to all branches of B.E. / B.Tech. Programmes in Semester I)

**L T P C**  
**3 1 0 4**

### OBJECTIVES:

- To develop the use of matrix algebra techniques that is needed by engineers for practical applications.
- To familiarize the students with differential calculus.
- To familiarize the student with functions of several variables. This is needed in many branches of engineering.
- To make the students understand various techniques of integration.
- To acquaint the student with mathematical tools needed in evaluating multiple integrals and their applications.

### UNIT I MATRICES

12

Eigenvalues and Eigenvectors of a real matrix - Characteristic equation - Properties of eigenvalues and eigenvectors - Cayley-Hamilton theorem - Diagonalization of matrices - Reduction of a quadratic form to canonical form by orthogonal transformation - Nature of quadratic forms.

### UNIT II DIFFERENTIAL CALCULUS

12

Limit of function - One sided limit - Limit Laws - Continuity - left and right continuity - types of discontinuities - Intermediate Value Theorem - Derivatives of a function - Differentiation rules - Chain rule - Implicit differentiation - logarithmic differentiation - Maxima and minima - Mean value theorem - (Optional: Polar coordinate system - Differentiation in polar coordinates).

*Attested*

### UNIT III FUNCTIONS OF SEVERAL VARIABLES

12

Partial derivatives - Homogeneous functions and Euler's theorem - Total derivative - Differentiation of implicit functions - Change of variables - Jacobians - Partial differentiation of implicit functions - Taylor's series for functions of two variables - Errors and approximations - Maxima and minima of functions of two variables - Lagrange's method of undetermined multipliers.

### UNIT IV INTEGRAL CALCULUS

12

Definite and Indefinite integrals - Substitution rule - Techniques of Integration - Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction, Integration of irrational functions - Improper integrals.

### UNIT V MULTIPLE INTEGRALS

12

Double integrals - Change of order of integration - Double integrals in polar coordinates - Area enclosed by plane curves - Triple integrals - Volume of solids - Change of variables in double and triple integrals.

**TOTAL: 60 PERIODS**

#### COURSE OUTCOMES:

**After completion the above subject, students will be able to understand**

- CO1: Use the matrix algebra methods for solving practical problems.
- CO2: Apply differential calculus tools in solving various application problems.
- CO3: Able to use differential calculus ideas on several variable functions.
- CO4: Apply different methods of integration in solving practical problems.
- CO5: Apply multiple integral ideas in solving areas, volumes and other practical problems.

**PH5151**

**ENGINEERING PHYSICS**  
(Common to all branches of B.E / B.Tech programmes)

**L T P C**  
**3 0 0 3**

**OBJECTIVE**

- To make the students in understanding the importance of mechanics.
- To equip the students on the knowledge of electromagnetic waves.
- To introduce the basics of oscillations, optics and lasers.
- To enable the students in understanding the importance of quantum physics.
- To elucidate the application of quantum mechanics towards the formation of energy bands in crystalline materials.

**UNIT I MECHANICS**

**9**

Moment of inertia (M.I) - Radius of gyration - Theorems of M .I - M.I of circular disc, solid cylinder , hollow cylinder , solid sphere and hollow sphere - K.E of a rotating body – M.I of a diatomic molecule - Rotational energy state of a rigid diatomic molecule - centre of mass - conservation of linear momentum - Relation between Torque and angular momentum - Torsional pendulum.

**UNIT II ELECTROMAGNETIC WAVES**

**9**

Gauss's law – Faraday's law - Ampere's law - The Maxwell's equations - wave equation; Plane electromagnetic waves in vacuum, Conditions on the wave field - properties of electromagnetic waves: speed, amplitude, phase, orientation and waves in matter - polarization - Producing electromagnetic waves - Energy and momentum in EM waves: Intensity, waves from localized sources, momentum and radiation pressure - Cell-phone reception. Reflection and transmission of electromagnetic waves from a non-conducting medium-vacuum interface for normal incidence.

**UNIT III OSCILLATIONS, OPTICS AND LASERS**

**9**

Simple harmonic motion - resonance - waves on a string - standing waves - traveling waves - Energy transfer of a wave - sound waves - Doppler effect - reflection and refraction of light waves - total internal reflection - interference - interferometers - air wedge experiment. Theory of laser - characteristics - Spontaneous and stimulated emission - Einstein's coefficients - population inversion - Nd-YAG laser, CO<sub>2</sub> laser, semiconductor laser - applications.

**UNIT IV BASIC QUANTUM MECHANICS**

**9**

Photons and light waves - Electrons and matter waves - The Schrodinger equation (Time dependent and time independent forms) - meaning of wave function - Normalization - Particle in a infinite potential well - Normalization, probabilities and the correspondence principle.

**UNIT V APPLIED QUANTUM MECHANICS**

**9**

The harmonic oscillator - Barrier penetration and quantum tunneling - Tunneling microscope - Resonant diode - Finite potential wells - particle in a three dimensional box - Bloch's theorem for particles in a periodic potential, Kronig-Penney model and origin of energy bands.

*Attested*

**TOTAL: 45 PERIODS**

## COURSE OUTCOMES:

After completion the above subject, students will be able to understand

CO1: Understanding the importance of mechanics.

CO2: Express the knowledge of electromagnetic waves.

CO3: Know the basics of oscillations, optics and lasers.

CO4: Understanding the importance of quantum physics.

CO5: Apply quantum mechanical principles towards the formation of energy bands in crystalline materials.

CY5151

**ENGINEERING CHEMISTRY  
(COMMON TO ALL BRANCHES)**

**L T P C  
3 0 0 3**

## OBJECTIVES:

- To introduce the basic concepts of polymers, their properties and some of the important applications.
- To impart knowledge on the basic principles and preparatory methods of nanomaterials.
- To facilitate the understanding of the laws of photochemistry, photo processes and instrumentation & applications of spectroscopic techniques.
- To familiarize the operating principles and applications of energy conversion, its processes and storage devices.
- To inculcate sound understanding of water quality parameters and water treatment techniques.

## UNIT I POLYMER CHEMISTRY

9

Introduction: Functionality-degree of polymerization. Classification of polymers- natural and synthetic, thermoplastic and thermosetting. Types and mechanism of polymerization: addition (free radical, cationic, anionic and living); condensation and copolymerization. Properties of polymers: T<sub>g</sub>, tacticity, molecular weight-weight average, number average and polydispersity index. Techniques of polymerization: Bulk, emulsion, solution and suspension. Structure, Properties and uses of: PE, PVC, PC, PTFE, PP, Nylon 6, Nylon 66, Bakelite, Epoxy; Conducting polymers – polyaniline and polypyrrole.

## UNIT II NANOCHEMISTRY

9

Basics-distinction between molecules, nanomaterials and bulk materials; size-dependent properties. Types -nanoparticle, nanocluster, nanorod, nanowire and nanotube. Preparation of nanomaterials: sol-gel, solvothermal, laser ablation, chemical vapour deposition, electrochemical deposition and electro spinning. Characterization - Scanning Electron Microscope and Transmission Electron Microscope - Principle and instrumentation (block diagram). Properties (optical, electrical, mechanical and magnetic) and Applications of nanomaterials - medicine, agriculture, electronics and catalysis.

## UNIT III PHOTOCHEMISTRY AND SPECTROSCOPY

9

Photochemistry: Laws of photochemistry - Grotthuss-Draper law, Stark-Einstein law and Lambert-Beer Law (derivation and problems). Photo physical processes - Jablonski diagram. Chemiluminescence, photo-sensitization and photoquenching - mechanism and examples. Spectroscopy: Electromagnetic spectrum - absorption of radiation - electronic, vibrational and rotational transitions. Width and intensities of spectral lines. Atomic absorption spectroscopy, UV-Vis and IR spectroscopy- principles, instrumentation (Block diagram) and applications.

## UNIT IV ENERGY CONVERSIONS AND STORAGE

9

Nuclear fission - controlled nuclear fission - nuclear fusion - differences between nuclear fission and fusion - nuclear chain reactions - nuclear energy - light water nuclear power plant - fast breeder reactor. Solar energy conversion - solar cells. Wind energy. Batteries - types of batteries - primary battery (dry cell), secondary battery (lead acid, nickel-cadmium and lithium-ion-battery). Fuel cells -  $H_2$ - $O_2$  and microbial fuel cell. Explosives - classification, examples: TNT, RDX, Dynamite; Rocket fuels and propellants - definition and uses.

## UNIT V WATER TECHNOLOGY

9

Water - sources and impurities - water quality parameters: colour, odour, pH, hardness, alkalinity, TDS, COD and BOD. Boiler feed water - requirement - troubles (scale & sludge, caustic embrittlement, boiler corrosion and priming & foaming. Internal conditioning - phosphate, calgon and carbonate treatment. External conditioning - zeolite (permutit) and ion exchange demineralization. Municipal water treatment process - primary (screening, sedimentation and coagulation), secondary (activated sludge process and trickling filter process) and tertiary (ozonolysis, UV treatment, chlorination, reverse osmosis).

**TOTAL: 45 PERIODS**

### COURSE OUTCOMES:

**After completion the above subject, students will be able to understand**

- CO1: To recognize and apply basic knowledge on different types of polymeric materials, their general preparation methods and applications to futuristic material fabrication needs.
- CO2: To identify and apply basic concepts of nano science and nanotechnology in designing the synthesis of nano materials for engineering and technology applications.
- CO3: To identify and apply suitable spectroscopic technique for material analysis and study different forms of photochemical reactions.
- CO4: To recognize different forms of energy resources and apply them for suitable applications in energy sectors.
- CO5: To demonstrate the knowledge of water and their quality in using at different industries.

**GE5153**

**PROBLEM SOLVING AND PYTHON PROGRAMMING**

**L T P C**  
**3 0 0 3**

#### OBJECTIVES:

- To know the basics of algorithmic problem solving.
- To develop Python programs with conditionals and loops.
- To define Python functions and use function calls.
- To use Python data structures - lists, tuples, dictionaries.
- To do input/output with files in Python.

#### UNIT I INTRODUCTION TO COMPUTING AND PROBLEM SOLVING

**9**

Fundamentals of Computing - Computing Devices - Identification of Computational Problems - Pseudocodes and Flowcharts - Instructions - Algorithms - Building Blocks of Algorithms - Introduction to Python Programming - Python Interpreter and Interactive Mode - Variables and Identifiers - Arithmetic Operators- Values and Types - Statements.

#### Suggested Activities:

- Developing Pseudocodes and flowcharts for real life activities such as railway ticket booking using IRCTC, admission process to undergraduate course, academic schedules during a semester etc.
- Developing algorithms for basic mathematical expressions using arithmetic operations.
- Installing Python.
- Simple programs on print statements, arithmetic operations.

#### Suggested Evaluation Methods:

- Assignments on pseudocodes and flowcharts.
- Tutorials on Python programs.

*Attested*

## UNIT II      **CONDITIONALS AND FUNCTIONS**

9

Operators - Boolean Values - Operator Precedence - Expression - Conditionals: If-Else Constructs - Loop Structures/Iterative Statements - While Loop - For Loop - Break Statement - Function Call and Returning Values - Parameter Passing - Local and Global Scope - Recursive Functions.

### **Suggested Activities:**

- Simple Python program implementation using Operators, Conditionals, Iterative Constructs and Functions.
- Implementation of a simple calculator.
- Developing simple applications like calendar, phone directory, to-do lists etc.
- Flow charts for GCD, Exponent Functions, Fibonacci Series using conditionals and iterative statements.
- External learning - Recursion vs. Iteration.

### **Suggested Evaluation Methods:**

- Tutorials on the above activities.
- Group Discussion on external learning.

## UNIT III      **SIMPLE DATA STRUCTURES IN PYTHON**

10

Introduction to Data Structures - List - Adding Items to a List - Finding and Updating an Item - Nested Lists - Cloning Lists - Looping Through a List - Sorting a List - List Concatenation - List Slices - List Methods - List Loop - Mutability - Aliasing - Tuples: Creation, Accessing, Updating, Deleting Elements in a Tuple, Tuple Assignment, Tuple as Return Value, Nested Tuples, Basic Tuple Operations - Sets.

### **Suggested Activities:**

- Implementing python program using lists, tuples, sets for the following scenario:  
Simple sorting techniques  
Student Examination Report  
Billing Scheme during shopping.
- External learning - List vs. Tuple vs. Set - Implementing any application using all the three data structures.

### **Suggested Evaluation Methods:**

- Tutorials on the above activities.
- Group Discussion on external learning component.

## UNIT IV      **STRINGS, DICTIONARIES, MODULES**

10

Strings: Introduction, Indexing, Traversing, Concatenating, Appending, Multiplying, Formatting, Slicing, Comparing, Iterating - Basic Built-In String Functions - Dictionary: Creating, Accessing, Adding Items, Modifying, Deleting, Sorting, Looping, Nested Dictionaries Built-in Dictionary Function - Finding Key and Value in a Dictionary - Modules - Module Loading and Execution - Packages - Python Standard Libraries.

### **Suggested Activities:**

- Implementing Python program by importing Time module, Math package etc.
- Creation of any package (student's choice) and importing into the application.

### **Suggested Evaluation Methods:**

- Tutorials on the above activities.

*Attested*

## UNIT V FILE HANDLING AND EXCEPTION HANDLING

7

Introduction to Files – File Path – Opening and Closing Files – Reading and Writing Files – File Position – Exception: Errors and Exceptions, Exception Handling, Multiple Exceptions.

### Suggested Activities:

- Developing modules using Python to handle files and apply various operations on files.
- Usage of exceptions, multiple except blocks - for applications that use delimiters like age, range of numerals etc.
- Implementing Python program to open a non-existent file using exceptions.

### Suggested Evaluation Methods:

- Tutorials on the above activities.
- Case Studies.

TOTAL: 45  
PERIODS

### COURSE OUTCOMES:

After completion the above subject, students will be able to understand

CO1: Develop algorithmic solutions to simple computational problems.

CO2: Develop and execute simple Python programs.

CO3: Write simple Python programs for solving problems.

CO4: Decompose a Python program into functions.

CO5: Represent compound data using Python lists, tuples, dictionaries etc.

CO6: Read and write data from/to files in Python programs.

**PHYSICS LABORATORY: (Any Seven Experiments)**

**OBJECTIVE**

- To inculcate experimental skills to test basic understanding of physics of materials including properties of matter, thermal and optical properties.
- To induce the students to familiarize with experimental determination of velocity of ultrasonic waves and band gap determination.

**LIST OF EXPERIMENTS:**

1. Torsional pendulum - Determination of rigidity modulus of wire and moment of inertia of disc
2. Non-uniform bending - Determination of Young's modulus
3. Uniform bending - Determination of Young's modulus
4. Lee's disc Determination of thermal conductivity of a bad conductor
5. Potentiometer-Determination of thermo e.m.f of a thermocouple
6. Laser- Determination of the wave length of the laser using grating
7. Air wedge - Determination of thickness of a thin sheet/wire
8. a) Optical fibre -Determination of Numerical Aperture and acceptance angle  
b) Compact disc- Determination of width of the groove using laser.
9. Acoustic grating- Determination of velocity of ultrasonic waves in liquids.
10. Ultrasonic interferometer - determination of the velocity of sound and compressibility of liquids
11. Post office box -Determination of Band gap of a semiconductor.
12. Spectrometer- Determination of wavelength using gating.
13. Photoelectric effect
14. Michelson Interferometer.
15. Estimation of laser parameters.
16. Melde's string experiment

**TOTAL: 30 PERIODS**

**COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

CO1: To determine various moduli of elasticity.

CO2: To determine the velocity of ultrasonic waves, band gap determination

CO3: To determine various thermal and optical properties of materials.

CO4: To determine the viscosity of liquids

CO5: To determine the estimation of laser parameters

## CHEMISTRY LABORATORY: (Minimum of 8 experiments to be conducted)

### OBJECTIVES:

- To inculcate experimental skills to test basic understanding of water quality parameters, such as, acidity, alkalinity, hardness, DO, chloride and copper.
- To induce the students to familiarize with electroanalytical techniques such as, pH metry, potentiometry and conductometry in the determination of impurities in aqueous solutions.
- To demonstrate the analysis of metals and polymers by spectroscopy and viscometry methods.

### LIST OF EXPERIMENTS:

1. Estimation of HCl using  $\text{Na}_2\text{CO}_3$  as primary standard and Determination of alkalinity in water sample.
2. Determination of total, temporary & permanent hardness of water by EDTA method.
3. Determination of DO content of water sample by Winkler's method.
4. Determination of chloride content of water sample by argentometric method.
5. Estimation of copper content of the given solution by Iodometry.
6. Determination of strength of given hydrochloric acid using pH meter.
7. Determination of strength of acids in a mixture of acids using conductivity meter.
8. Estimation of iron content of the given solution using potentiometer.
9. Estimation of iron content of the water sample using spectrophotometer (1, 10-Phenanthroline / thiocyanate method).
10. Estimation of sodium and potassium present in water using flame photometer.
11. Determination of molecular weight of polyvinylalcohol using Ostwald viscometer.
12. Pseudo first order kinetics-ester hydrolysis.
13. Corrosion experiment-weight loss method.
14. Phase change in a solid.

**TOTAL: 30 PERIODS**

### COURSE OUTCOMES:

**After completion the above subject, students will be able to understand**

CO1: To analyse the quality of water samples with respect to their acidity, alkalinity, hardness and DO.

CO2: To determine the amount of metal ions through volumetric and spectroscopic techniques

CO3: To determine the molecular weight of polymers by viscometric method.

CO4: To quantitatively analyse the impurities in solution by electroanalytical techniques

CO5: To design and analyse the kinetics of reactions and corrosion of metals

### TEXTBOOKS:

1. Laboratory Manual- Department of Chemistry, CEGC, Anna University (2014).
2. Vogel's Textbook of Quantitative Chemical Analysis (8<sup>th</sup> edition, 2014).

**GE5161**

**PROBLEM SOLVING AND PYTHON PROGRAMMING LABORATORY**

**LT P C  
0 0 4 2**

**OBJECTIVES:**

- To understand the problem solving approaches.
- To learn the basic programming constructs in Python.
- To articulate where computing strategies support in providing Python-based solutions to real world problems.
- To use Python data structures - lists, tuples, dictionaries.
- To do input/output with files in Python.

**EXPERIMENTS:**

1. Identification and solving of simple real life or scientific or technical problems, and developing flow charts for the same.
2. Python programming using simple statements and expressions.
3. Scientific problems using Conditionals and Iterative loops.
4. Implementing real-time/technical applications using Lists, Tuples.
5. Implementing real-time/technical applications using Sets, Dictionaries.
6. Implementing programs using Functions.
7. Implementing programs using Strings.
8. Implementing programs using written modules and Python Standard Libraries.
9. Implementing real-time/technical applications using File handling.
10. Implementing real-time/technical applications using Exception handling.
11. Exploring Pygame tool.
12. Developing a game activity using Pygame like bouncing ball, car race etc.

**TOTAL: 60 PERIODS**

**COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

- CO1: Develop algorithmic solutions to simple computational problems  
 CO2: Develop and execute simple Python programs.  
 CO3: Structure simple Python programs for solving problems.  
 CO4: Decompose a Python program into functions.  
 CO5: Represent compound data using Python data structures.  
 CO6: Apply Python features in developing software applications.

<b>MA5252</b>	<b>ENGINEERING MATHEMATICS – II</b> (Common to all branches of B.E. / B.Tech. Programmes in Semester II)	<b>L</b>	<b>T</b>	<b>P</b>	<b>C</b>
		<b>3</b>	<b>1</b>	<b>0</b>	<b>4</b>

**OBJECTIVES:**

- To acquaint the students with the concepts of vector calculus which naturally arises in many engineering problems.
- To develop an understanding of the standard techniques of complex variable theory in particular analytic function and its mapping property.
- To familiarize the students with complex integration techniques and contour integration techniques which can be used in real integrals.
- To acquaint the students with Differential Equations which are significantly used in engineering problems.
- To make the students appreciate the purpose of using transforms to create a new domain in which it is easier to handle the problem that is being investigated.

**UNIT I VECTOR CALCULUS 12**

Gradient and directional derivative - Divergence and Curl - Irrotational and Solenoidal vector fields - Line integral over a plane curve - Surface integral - Area of a curved surface - Volume integral - Green's theorem, Stoke's theorem and Gauss divergence theorem - Verification and application in evaluating line, surface and volume integrals.

**UNIT II ANALYTIC FUNCTION 12**

Analytic functions - Necessary and sufficient conditions for analyticity - Properties - Harmonic conjugates - Construction of analytic function - Conformal mapping - Mapping by functions - Bilinear transformation  $w = c + z, az, 1/z, z^2$ .

**UNIT III COMPLEX INTEGRATION 12**

Line integral - Cauchy's integral theorem - Cauchy's integral formula - Taylor's and Laurent's series - Singularities - Residues - Residue theorem - Application of residue theorem for evaluation of real integrals - Use of circular contour and semicircular contour with no pole on real axis

**UNIT IV DIFFERENTIAL EQUATIONS 12**

Method of variation of parameters - Method of undetermined coefficients - Homogenous equations of Euler's and Legendre's type - System of simultaneous linear differential equations with constant coefficients.

**UNIT V LAPLACE TRANSFORMS 12**

Existence conditions - Transforms of elementary functions - Transform of unit step function and unit impulse function - Basic properties - Shifting theorems - Transforms of derivatives and integrals - Initial and Final Value Theorems - Inverse Transforms - Convolution Theorem - Transform of periodic functions - Application to solution of linear ordinary differential equations with constant coefficients.

**TOTAL: 60 PERIODS**

*Attested*

**COURSE OUTCOMES:****After completion the above subject, students will be able to understand**

CO1: Calculate grad, div and curl and use Gauss, Stokes and Greens theorems to simplify calculations of integrals.

CO2: Construct analytic functions and use their conformal mapping property in application problems.

CO3: Evaluate real and complex integrals using the Cauchy's integral formula and residue theorem.

CO4: Apply various methods of solving differential equation which arise in many application problems.

CO5: Apply Laplace transform methods for solving linear differential equations.

**COURSE OBJECTIVES:** The main learning objective of this course is to prepare the students for:

1. Drawing free hand sketches of basic geometrical shapes and multiple views of objects.
2. Drawing orthographic projections of lines and planes.
3. Drawing orthographic projections of solids.
4. Drawing development of the surfaces of objects.
5. Drawing isometric and perspective views of simple solids.

**CONCEPTS AND CONVENTIONS (NOT FOR EXAMINATION)**

1

Importance of graphics in engineering applications - Use of drafting instruments - BIS conventions and specifications - Size, layout and folding of drawing sheets - Lettering and dimensioning.

**UNIT I PLANE CURVES AND FREE HANDSKETCHING**

14

Basic Geometrical constructions, Curves used in engineering practices-Conics – Construction of ellipse, parabola and hyperbola by different methods – Construction of cycloid – construction of involutes of square and circle – Drawing of tangents and normal to the above curves. Visualization concepts and Free Hand sketching: Visualization principles - Representation of Three-Dimensional objects - Layout of views- Free hand sketching of multiple views from pictorial views of objects

**UNIT II PROJECTION OF POINTS, LINES AND PLANE SURFACES**

15

Orthographic projection- principles-Principle planes-First angle projection-Projection of points. Projection of straight lines (only First angle projections) inclined to both the principal planes-Determination of true lengths and true inclinations by rotating line method and trapezoidal method and traces Projection of planes (polygonal and circular surfaces) inclined to both the principal planes by rotating object method.

**UNIT III PROJECTION OF SOLIDS**

15

Projection of simple solids like prisms, pyramids, cylinder, cone and truncated solids when the axis is inclined to both the principal planes by rotating object method and auxiliary plane method.

**UNIT IV PROJECTION OF SECTIONED SOLIDS AND DEVELOPMENT OF SURFACES**

15

Sectioning of solids in simple vertical position when the cutting plane is inclined to the one of the principal planes and perpendicular to the other – obtaining true shape of section. Development of lateral surfaces of simple and sectioned solids - Prisms, pyramids cylinders and cones. Development of lateral surfaces of solids with cut-outs and holes.

**UNIT V ISOMETRIC AND PERSPECTIVE PROJECTIONS**

12

Principles of isometric projection – isometric scale -Isometric projections of simple solids and truncated solids - Prisms, pyramids, cylinders, cones- combination of two solid objects in simple vertical positions and miscellaneous problems. Perspective projection of simple solids-Prisms pyramids and cylinders by visual ray method and vanishing point method.

**COMPUTER AIDED DRAFTING (DEMONSTRATION ONLY)**

3

Introduction to drafting packages and demonstration of their use

**TOTAL (L: 15 + P: 60) =75 PERIODS**

**COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

- CO1: Draw free hand sketching of basic geometrical shapes and multiple views of objects.  
 CO2: Draw orthographic projections of lines and planes  
 CO3: Draw orthographic projections of solids  
 CO4: Draw development of the surfaces of objects.  
 CO5: Draw isometric and perspective views of simple solids.

*Attested*

5. IS 15021 (Parts 1 to 4) - 2001: Technical drawings - Projection Methods.

**Special points applicable to University Examinations on Engineering Graphics:**

1. There will be five questions, each of either or type covering all units of the syllabus.
2. All questions will carry equal marks of 20 each making a total of 100.
3. The answer paper shall consist of drawing sheets of A3 size only.
4. The students will be permitted to use appropriate scale to fit solution within A3 size.
5. The examination will be conducted in appropriate sessions on the same day.

**EE5251****BASICS OF ELECTRICAL AND ELECTRONICS ENGINEERING****LT P C****3 0 0 3****OBJECTIVES:**

- To understand the basic concepts of electric circuits.
- To study about the three phase system and magnetic circuits
- To understand the operation of AC and DC machines.
- To understand the working principle of electronic devices
- To study the working of current controlled and voltage controlled devices.

**UNIT I BASIC CIRCUITS AND DOMESTIC WIRING****9**

Electrical circuit elements (R, L and C)-Dependent and independent sources – Ohm's Law- Kirchhoff's laws - mesh current and node voltage methods (Analysis with only independent source) - Phasors – RMS-Average values-sinusoidal steady state response of simple RLC circuits. Types of wiring- Domestic wiring - Specification of Wires-Earthing-Methods-Protective devices.

**UNIT II THREE PHASE CIRCUITS AND MAGNETIC CIRCUITS 9**

Three phase supply - Star connection - Delta connection -Balanced and Unbalanced Loads- Power in three-phase systems - Comparison of star and delta connections - Advantages-Magnetic circuits-Definitions-MMF, Flux, Reluctance, Magnetic field intensity, Flux density, Fringing, self and mutual inductances-simple problems.

**UNIT III ELECTRICAL MACHINES 9**

Working principle of DC generator, motor-EMF and Torque equation-Types -Shunt, Series and Compound-Applications. Working principle of transformer-EMF equation-Operating principles of three phase and single phase induction motor-Applications. Working principles of alternator-EMF equation-Operating principles of Synchronous motor, stepper motor-Applications.

**UNIT IV BASICS OF ELECTRONICS 9**

Intrinsic semiconductors, Extrinsic semiconductors – P-type and N-type, P-N junction, VI Characteristics of PN junction diode, Zener effect, Zener diode, Zener diode Characteristics-Rectifier circuits-Wave shaping.

**UNIT V CURRENT CONTROLLED AND VOLTAGE CONTROLLED DEVICES 9**

Working principle and characteristics - BJT, SCR, JFET, MOSFET.

**TOTAL: 45 PERIODS**

**COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

- CO1: To be able to understand the concepts related with electrical circuits and wiring.
- CO2: To be able to study the different three phase connections and the concepts of magnetic circuits.
- CO3: Capable of understanding the operating principle of AC and DC machines.
- CO4: To be able to understand the working principle of electronic devices such as diode and zener diode.
- CO 5: To be able to understand the characteristics and working of current controlled and voltage controlled devices.

ENGINEERING MECHANICS

LTPC  
3104

**COURSE OBJECTIVES:** The main learning objective of this course is to prepare the students for:

1. Applying the various methods to determine the resultant forces and its equilibrium acting on a particle in 2D and 3D.
2. Applying the concept of reaction forces (non-concurrent coplanar and non coplanar forces) and moment of various support systems with rigid bodies in 2D and 3D in equilibrium. Reducing the force, moment, and couple to an equivalent force - couple system acting on rigid bodies in 2D and 3D.
3. Applying the concepts of locating centroids/center of gravity of various sections / volumes and to find out area moments of inertia for the sections and mass moment of inertia of solids.
4. Applying the concepts of frictional forces at the contact surfaces of various engineering systems.
5. Applying the various methods of evaluating kinetic and kinematic parameters of the rigid bodies subjected to concurrent coplanar forces.

### UNIT I STATICS OF PARTICLES

(9+3)

Fundamental Concepts and Principles, Systems of Units, Method of Problem Solutions, Statics of Particles - Forces in a Plane, Resultant of Forces, Resolution of a Force into Components, Rectangular Components of a Force, Unit Vectors. Equilibrium of a Particle- Newton's First Law of Motion, Space and Free-Body Diagrams, Forces in Space, Equilibrium of a Particle in Space.

### UNIT II EQUILIBRIUM OF RIGID BODIES

(9+3)

Principle of Transmissibility, Equivalent Forces, Vector Product of Two Vectors, Moment of a Force about a Point, Varignon's Theorem, Rectangular Components of the Moment of a Force, Scalar Product of Two Vectors, Mixed Triple Product of Three Vectors, Moment of a Force about an Axis, Couple - Moment of a Couple, Equivalent Couples, Addition of Couples, Resolution of a Given Force into a Force - Couple system, Further Reduction of a System of Forces, Equilibrium in Two and Three Dimensions - Reactions at Supports and Connections.

### UNIT III DISTRIBUTED FORCES

(9+3)

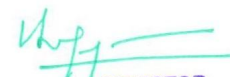

Centroids of lines and areas – symmetrical and unsymmetrical shapes, Determination of Centroids by Integration, Theorems of Pappus-Guldinus, Distributed Loads on Beams, Centre of Gravity of a Three-Dimensional Body, Centroid of a Volume, Composite Bodies, Determination of Centroids of Volumes by Integration. Moments of Inertia of Areas and Mass - Determination of the Moment of Inertia of an Area by Integration, Polar Moment of Inertia, Radius of Gyration of an Area, Parallel-Axis Theorem, Moments of Inertia of Composite Areas, Moments of Inertia of a Mass - Moments of Inertia of Thin Plates, Determination of the Moment of Inertia of a Three-Dimensional Body by Integration

### UNIT IV FRICTION

(9+3)

The Laws of Dry Friction. Coefficients of Friction, Angles of Friction, Wedges, Wheel Friction. Rolling

Attested

Resistance, Ladder friction.

## UNIT V DYNAMICS OF PARTICLES

(9+3)

Kinematics - Rectilinear Motion and Curvilinear Motion of Particles. Kinetics- Newton's Second Law of Motion -Equations of Motions, Dynamic Equilibrium, Energy and Momentum Methods - Work of a Force , Kinetic Energy of a Particle, Principle of Work and Energy, Principle of Impulse and Momentum, Impact, Method of Virtual Work - Work of a Force, Potential Energy, Potential Energy and Equilibrium.

**TOTAL (L: 45 + T: 15) =60 PERIODS**

### COURSE OUTCOMES:

**After completion the above subject, students will be able to understand**

- CO1: Apply the various methods to determine the resultant forces and its equilibrium acting on a particle in 2D and 3D.
- CO2: Apply the concept of reaction forces (non-concurrent coplanar and noncoplanar forces) and moment of various support systems with rigid bodies in 2D and 3D in equilibrium. Reducing the force, moment, and couple to an equivalent force - couple system acting on rigid bodies in 2D and 3D.
- CO3: Apply the concepts of locating centroids / center of gravity of various sections / volumes and to find out area moments of inertia for the sections and mass moment of inertia of solids.
- CO4: Apply the concepts of frictional forces at the contact surfaces of various engineering systems.
- CO5: Apply the various methods of evaluating kinetic and kinematic parameters of the rigid bodies subjected to concurrent coplanar forces.

**OBJECTIVE**

- To make the students to understand the basics of crystallography and its importance in completion materials properties.
- To understand the electrical properties of materials including free electron theory, applications of quantum mechanics and magnetic materials.
- To instill knowledge on physics of semiconductors, determination of charge carriers and device applications
- To establish a sound grasp of knowledge on different optical properties of materials, optical displays and applications
- To inculcate an idea of significance of nano structures, quantum confinement and ensuing nano device applications.

**UNIT I CRYSTALLOGRAPHY 9**

Crystal structures - Bravais lattices - packing factor of SC, BCC, FCC, HCP and diamond structures - Close-packed crystal directions and planes - Surface crystallography - surface structure for BCC and close packed structures - surface to volume ratio: plane, cylinder, cube, sphere - Number of atoms and number of surface atoms in a structure: unit cell approach - imperfections and impurities.

**UNIT II ELECTRICAL AND MAGNETIC PROPERTIES OF MATERIALS 9**

Classical free electron theory - Expression for electrical conductivity - Thermal conductivity, expression - Quantum free electron theory : Tunneling - degenerate states - Fermi- Dirac statistics - Density of energy states - Electron in periodic potential - Energy bands in solids - tight binding approximation - Electron effective mass - concept of hole. Ferromagnetism: origin and exchange interaction- saturation magnetization and curie temperature - Domain Theory- M versus H behaviour - Hard and soft magnetic materials.

**UNIT III SEMICONDUCTORS AND TRANSPORT PHYSICS 9**

Intrinsic Semiconductors - Energy band diagram - direct and indirect band gap semiconductors - Carrier concentration in intrinsic semiconductors - extrinsic semiconductors - Carrier concentration in N-type & P-type semiconductors - Variation of carrier concentration with temperature - Carrier transport in Semiconductors: Drift, mobility and diffusion - Hall effect and devices - Ohmic contacts - Schottky diode.

**UNIT IV OPTICAL PROPERTIES OF MATERIALS 9**

Classification of optical materials - Absorption emission and scattering of light in metals, insulators & Semiconductors - LED's - Organic LED's - Plasma light emitting devices - LCD's - Laser diodes - Optical data storage techniques (including DVD, Blue -ray disc, Holographic data storage).

**UNIT V NANO DEVICES 9**

Electron density in a conductor - Significance between Fermi energy and volume of the material - Quantum confinement - Quantum structures - Density of states for quantum wells, wires and dots - Band gap of nanomaterials - Tunneling - Single electron phenomena - Single electron Transistor. Conductivity of metallic nanowires - Ballistic transport - Quantum resistance and conductance - Carbon nanotubes: Properties and applications - Transport of spin - Spintronic devices and applications.

**TOTAL: 45 PERIODS**

## COURSE OUTCOMES:

After completion the above subject, students will be able to understand

CO1: Know basics of crystallography and its importance for materials properties

CO2: Come to have firm knowledge on the electrical and magnetic properties of materials and their applications

CO3: Acquire adequate understanding of semiconductor physics and functioning of semiconductor devices

CO4: Understand the optical properties of materials and working principles of various optical devices

CO5: Appreciate the importance of nanotechnology, physics of nano devices, low-dimensional structures and their applications

**WORKSHOP PRACTICES LABORATORY**  
(Common to all Branches of B.E. / B.Tech. Programmes)

**LT P C**  
**0 0 4 2**

**COURSE OBJECTIVES:** The main learning objective of this course is to provide hands on training to the students in:

1. Drawing pipe line plan; laying and connecting various pipe fittings used in common household plumbing work; Sawing; planing; making joints in wood materials used in common household wood work.
2. Wiring various electrical joints in common household electrical wire work.
3. Welding various joints in steel plates using arc welding work; Machining various simple processes like turning, drilling, tapping in parts; Assembling simple mechanical assembly of common household equipments; Making a tray out of metal sheet using sheet metal work.
4. Soldering and testing simple electronic circuits; Assembling and testing simple electronic components on PCB.

*Attested*

## GROUP – A (CIVIL & ELECTRICAL)

### PART I CIVIL ENGINEERING PRACTICES

15

#### PLUMBING WORK:

- Connecting various basic pipe fittings like valves, taps, coupling, unions, reducers, elbows and other components which are commonly used in household.
- Preparing plumbing line sketches.
- Laying pipe connection to the suction side of a pump
- Laying pipe connection to the delivery side of a pump.
- Connecting pipes of different materials: Metal, plastic and flexible pipes used in household appliances.

#### WOOD WORK:

- Sawing,
- Planning and
- Making joints like T-Joint, Mortise joint and Tenon joint and Dovetail joint.

#### Wood Work Study:

- Completion joints in door panels and wooden furniture
- Completion common industrial trusses using models.

### PART II ELECTRICAL ENGINEERING PRACTICES

15

#### WIRING WORK:

- Wiring Switches, Fuse, Indicator and Lamp etc. such as in basic household,
- Wiring Stair case light.
- Wiring tube - light.
- Preparing wiring diagrams for a given situation.

#### Wiring Study:

- Completion an Iron-Box wiring.
- Completion a Fan Regulator wiring.
- Completion an Emergency Lamp wiring.

## GROUP – B (MECHANICAL AND ELECTRONICS)

### PART III MECHANICAL ENGINEERING PRACTICES

15

#### WELDING WORK:

- Welding of Butt Joints, Lap Joints, and Tee Joints using arc welding.
- Practicing gas welding.

#### BASIC MACHINING WORK:

*Attested*

- a) (simple)Turning.
- b) (simple)Drilling.
- c) (simple)Tapping.

**ASSEMBLY WORK:**

- a) Assembling a centrifugal pump.
- b) Assembling a household mixer.
- c) Assembling an air conditioner.

**SHEET METAL WORK:**

- a) Making of a square tray

**FOUNDRY WORK:**

- a) Demonstrating basic foundry operations.

**PART IV ELECTRONIC ENGINEERING PRACTICES**

**15**

**SOLDERING WORK:**

- a) Soldering simple electronic circuits and checking continuity.

**ELECTRONIC ASSEMBLY AND TESTING WORK:**

- a) Assembling and testing electronic components on a small PCB.

**ELECTRONIC EQUIPMENT STUDY:**

- a) Completion a FM radio.
- b) Completion an electronic telephone.

**TOTAL (P: 60) = 60 PERIODS**

**COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

- CO1: Draw pipe line plan; lay and connect various pipe fittings used in common household plumbing work; Saw; plan; make joints in wood materials used in common household wood work.
- CO2: Wire various electrical joints in common household electrical wire work.
- CO3: Weld various joints in steel plates using arc welding work; Machine various simple processes like turning, drilling, tapping in parts; Assemble simple mechanical assembly of common household equipment; Make a tray out of metal sheet using sheet metal work.
- CO4: Solder and test simple electronic circuits; Assemble and test simple electronic components on PCB.

EE5211

**BASIC ELECTRICAL AND ELECTRONICS ENGINEERING  
LABORATORY**

**L T P C  
0 0 4 2**

**OBJECTIVE:**

- To provide practical knowledge of fundamental concepts of electrical and electronics engineering through relevant experiments.
- To impart hands on experience in measurement of electric and magnetic circuit parameters.
- To train the students in performing various tests on electrical motors, generators
- To Analyze various digital circuits.
- To study the characteristics of electronic devices.

**LIST OF EXPERIMENTS**

1. Choice of wire gauges, resistor colour coding and fuses for a given circuit
2. Measurement of DC and AC voltage and current in electrical circuits
3. Measurement of magnetic flux in magnetic circuits.
4. Measurement of power factor, RMS, peak and frequency and measurement of inductance and capacitance
5. Star and delta connections with balanced and unbalanced loads.
6. Speed control of ceiling fan motor/ BLDC motor / Stepper motor.
7. V-I characteristics of DC / AC generator
8. V-I characteristics BJT / UJT / diode and development of one application circuit
9. Development of simple application circuits with digital devices
10. Application of MOSFET circuits.

**TOTAL: 60 PERIODS**

**COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

CO1: Manipulate simple electric and magnetic circuits.

CO2: Become familiar with the basic circuit components and know how to connect them to make a real electrical circuit;

CO3: Become familiar with the characteristics of various electronic devices.

CO4: Ability to Design and construct different digital application circuits.

CO5: Ability to assess the performance of various motors and generators.

**TRANSFORM TECHNIQUES AND PARTIAL DIFFERENTIAL EQUATIONS**

**L T P C  
3 1 0 4**

**OBJECTIVES:**

- To introduce the effective mathematical tools for the solutions of partial differential equations that model physical processes;
- To introduce Fourier series analysis which is central to many applications in engineering :
- To develop the analytic solutions for partial differential equations used in engineering by Fourier series;
- To acquaint the student with Fourier transform techniques used in wide variety of situations in which the functions used are not periodic;
- To develop Z- transform techniques which will perform the same task for discrete time systems as Laplace Transform, a valuable aid in analysis of continuous time systems.

**UNIT I PARTIAL DIFFERENTIAL EQUATIONS**

**12**

Formation - Solutions of first order equations - Standard types and Equations reducible to standard types - Lagrange's Linear equation - Solution of linear equations of higher order with constant coefficients - Linear non-homogeneous partial differential equations.

**UNIT II FOURIER SERIES**

**12**

Dirichlet's conditions - General Fourier series - Odd and even functions - Half-range Sine and cosine series - Complex form of Fourier series - Parseval's identity - Harmonic Analysis.

**UNIT III APPLICATIONS OF PARTIAL DIFFERENTIAL EQUATION**

**12**

Classification of partial differential equations- Method of separation of variables – Solutions of one dimensional wave equation and one-dimensional heat equation – Steady state solution of two-dimensional heat equation – Fourier series solutions in cartesian coordinates.

**UNIT IV FOURIER TRANSFORM**

**12**

Fourier integral theorem - Fourier transform pair - Sine and cosine transforms - Properties - Transform of elementary functions - Convolution theorem - Parseval's identity.

**UNIT V Z – TRANSFORM AND DIFFERENCE EQUATIONS**

**12**

Z-transform - Elementary properties - Inverse Z-transform - Convolution theorem - Initial and final value theorems - Formation of difference equation - Solution of difference equation using Z - transform.

**TOTAL: 60 PERIODS**

**COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

CO1: Solve partial differential equations which arise in application problems.

CO2: Analyze the functions as an infinite series involving sine and cosine functions.

CO3: Obtain the solutions of the partial differential equations using Fourier series.

CO4: Obtain Fourier transforms for the functions which are needed for solving application problems.

CO5: Manipulate discrete data sequences using Z transform techniques.

**SIGNALS AND SYSTEMS**

**LT P C  
3 0 0 3**

**Objectives**

- To introduce the fundamentals and classifications of signals and systems
- To get familiarized to system representation and stability study with Laplace transform
- To analyze the continuous time signals , Fourier series and to learn to apply frequency analysis
- To impart knowledge on discrete time signals and discretised systems .
- To understand importance of sampling sampling theorem and its implications

**UNIT I INTRODUCTION TO SIGNALS AND SYSTEMS :**

**9**

Continuous time signals - Discrete time signals - Representation of signals - Step, Ramp, Pulse, Impulse, Sinusoidal, Exponential signals, Operations on the signals - Classification of continuous and discrete time signals - Continuous time and discrete time systems - Classification of systems - Properties of systems

**UNIT II BEHAVIOR OF CONTINUOUS AND DISCRETE-TIME LTI SYSTEMS**

**9**

Impulse response and step response, convolution, input-output behavior with aperiodic convergent inputs, cascade interconnections. LTI continuous time systems- Differential equations – Characterization of causality and stability of LTI systems- Laplace Transforms -properties-ROC- Transfer function and Impulse response -Block diagram representation and reduction - Convolution Integral - State variable techniques -State equations.

*Attested*

**UNIT III      FOURIER TRANSFORMS****9**

Fourier series representation of periodic signals, Waveform Symmetries, Calculation of Fourier Coefficients. Fourier Transform, convolution/multiplication and their effect in the frequency domain, magnitude and phase response- The Discrete- Time Fourier Transform (DTFT) -properties- the Discrete Fourier Transform (DFT) -properties- Linear and Circular Convolution

**UNIT IV      Z- TRANSFORMS****9**

The z-Transform for discrete time signals and systems, system functions- Laplace Transforms to z-transformation-, poles and zeros of systems and sequences, z-domain analysis- Properties – Z Transformation: Properties - Different methods of finding Inverse Z-Transformation

**UNIT V      SAMPLING AND RECONSTRUCTION****9**

The Sampling Theorem and its implications. Spectra of sampled signals. Reconstruction: ideal interpolator, zero-order hold, first-order hold. Aliasing and its effects- applications -filtering, feedback control systems

**TOTAL: 45 PERIODS****COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

- CO1: Apply the concepts of continuous time and discrete time systems to analyse systems in time domain
- CO2: Understand system stability analysis
- CO3: Apply the concepts of continuous time and discrete time systems to analyse systems in frequency domain.
- CO4: Understand implications of z-Transform in digitizing in system analysis
- CO5: Understand sampling theorem and its implications in during signal reconstruction.

**ELECTROMAGNETIC THEORY**

**LT P C**  
**3 0 0 3**

**OBJECTIVES:**

- To review the fundamentals of the different coordinate systems, vector algebra and calculus
- To teach the basic laws of electromagnetism
- To learn to compute and visualize the electrostatic and magnetostatic fields for simple configurations
- To analyse the time varying electric and magnetic fields and to understand Maxwell's equations
- To understand the propagation of electromagnetic waves through different media

**UNIT I ELECTROSTATICS I 9**

Vector algebra , Coordinate systems, Vector calculus- Gradient, Divergence and Curl , theorems and applications, Sources and effects of electromagnetic fields, Coulomb's Law - Electric field intensity - Field due to discrete and continuous charges - Gauss's law and its applications.

**UNIT II ELECTROSTATICS II 9**

Electric potential - Electric field and equipotential plots, Uniform and Non-Uniform field, Utilization factor - Electric field in free space, conductors, dielectric -Dielectric polarization - Dielectric strength - Electric fields in multiple dielectrics - Boundary conditions, capacitance, Energy density, Poisson's and Laplace's equations - solutions by Direct Integration method, Applications

**UNIT III MAGNETOSTATICS 9**

Lorentz force, magnetic field intensity (H) – Biot- Savart's Law - Ampere's Circuit Law – H due to straight conductors, circular loop, infinite sheet of current, Magnetic flux density (B) - B in free space, conductor, magnetic materials – Magnetization, Magnetic field in multiple media – Boundary conditions, Scalar and vector potential, Poisson's Equation, Magnetic force, Torque, Inductances and mutual inductances, Energy density, Applications.

**UNIT IV ELECTRODYNAMIC FIELDS 9**

Magnetic Circuits - Faraday's law - Transformer and motional EMF - Displacement current - Maxwell's equations (differential and integral form) - Time varying potential - Relation between field theory and circuit theory , Applications.

**UNIT V ELECTROMAGNETIC WAVES 9**

Electromagnetic Wave Generation and equations - Wave parameters; velocity, intrinsic impedance, propagation constant – Waves in free space, lossless and lossy dielectrics, conductors-skin depth , Poynting vector , Plane wave reflection and refraction - Standing Wave ,Applications.

**TOTAL : 45 PERIODS**

**COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

- CO1: Ability to identify appropriate coordinate systems and visualize and understand the practical significance of vector calculus
- CO2: Understanding of the basic laws of electromagnetism
- CO3: Ability to compute, visualize electrostatic and magneto static fields along with practical applications

- CO4: Understanding of Maxwell's equations in different forms and media  
 CO5: Able to understand the concept of generation and propagation of electromagnetic waves through single and multiple media.

**ANALOG ELECTRONICS**

**LT P C  
3 0 0 3**

**OBJECTIVES:**

- To be familiar with the structure of basic electronic devices
- To be exposed to the operation and application of electronic devices and their circuits
- To analyze circuit characteristics with signal analysis using Op-amp lcs.
- To design and construct application circuits with lcs as Op-amp, 555, 566 etc.
- To study internal functional blocks and the applications of special ICs like Timers, PLL circuits, regulator ICs and DAC/ADCs

**UNIT I ELECTRONIC DEVICES AND THEIR CHARACTERISTICS**

**9**

PN junction diodes - structure, operation and VI characteristics: drift and diffusion current, transient capacitance - BJT, JFET, MOSFET : structure, operation and characteristics ; biasing ; UJT based relaxation oscillator

*Attested*

**UNIT II            AMPLIFIER CIRCUITS****9**

BJT small signal model – Analysis of CE amplifier , Gain and Frequency response - Differential Amplifier - Multi-stage amplifier - Common mode and Differential mode analysis - Current mirror circuits - Introduction to internal circuit of typical OPAMP.

**UNIT III            OPAMP AND CHARACTERISTICS****9**

Ideal OPAMP characteristics, DC characteristics, AC characteristics, Voltage -series feedback and voltage -shunt feedback - Frequency response of OPAMP - Basic applications: inverting, non-inverting and differential amplifier circuits, Adder-subtractor circuits - Differentiation and integrator circuits.

**UNIT IV            APPLICATION OF OPAMPS****9**

Instrumentation amplifiers, First-order and Second order active filters, V to I and I to V converters, Comparators and multi-vibrators, Waveform generators, Clippers and Clampers, Peak detector, D/A converters ( Weighted resistance type and R-2R ladder type), A/D converters ( Flash type, Dual slope type and Successive Approximation types)

**UNIT V            SPECIAL ICS****9**

555 Timer circuit: Functional block diagram, characteristics & applications - Astable and monostable multivibrator -566 Voltage Controlled Oscillator circuits - PLL Phase Locked Loop applications - Function generator circuit – Linear Voltage regulators

**TOTAL : 45 PERIODS****COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

CO1: Ability to understand the structure and underlying semiconductor physics concepts.

CO2: Ability to design circuits employing electronic devices.

CO3: Analyze, comprehend and design of analog electronic circuits involving OP-AMP

CO4: Analyze, comprehend and design of analog electronic circuits involving timer 555

CO5: Analyze, comprehend and design of analog electronic circuits involving PLL, voltage regulator & other specializations.

ELECTRIC CIRCUIT ANALYSIS

L T P C  
3 0 2 4

## OBJECTIVES:

- To study the fundamentals of the concept of circuit elements
- To teach the basic laws of networks
- To learn to analyze the AC single phase and three phase circuits
- To understand the Laplace Transforms in the context of circuit representations
- To analyze two port network and its parameters

### UNIT I NETWORK THEOREMS 9

Applications of: Superposition theorem, Thevenin's theorem, Norton's theorem, Maximum power transfer theorem, Reciprocity theorem, Compensation theorem. Analysis with dependent current and voltage sources. Node and Mesh Analysis. Concept of duality and dual networks.

### UNIT II SOLUTION OF FIRST AND SECOND ORDER NETWORKS 9

Solution of first and second order differential equations for Series and parallel R-L, R-C, R-L-C circuits, initial and final conditions in network elements, forced and free response, time constants, steady state and transient state response.

### UNIT III SINUSOIDAL STEADY STATE ANALYSIS 9

Representation of sine function as rotating phasor, phasor diagrams, impedances and admittances, AC circuit analysis, effective or RMS values, average power and complex power. Three-phase circuits. Mutual coupled circuits, Dot Convention in coupled circuits, Ideal Transformer.

### UNIT IV ELECTRICAL CIRCUIT ANALYSIS USING LAPLACE TRANSFORMS 9

Review of Laplace Transform, Analysis of electrical circuits using Laplace Transform for standard inputs, convolution integral, inverse Laplace transform, transformed network with initial conditions. Transfer function representation. Poles and Zeros. Frequency response (magnitude and phase plots), series and parallel resonances.

### UNIT V TWO PORT NETWORK AND NETWORK FUNCTIONS 9

Two Port Networks, terminal pairs, relationship of two port variables, impedance parameters, admittance parameters, transmission parameters and hybrid parameters, interconnections of two port networks.

## LAB COMPONENT

Hardware and software for Circuit analysis exploration.

1. Solution of circuit problems for Kirchhoff's voltage and current laws.
2. Application and experimental verification of network theorems (Thevenin's, Norton's, Superposition, maximum power transfer Theorem and reciprocity theorem).
3. Study of CRO and measurement of RMS voltage, frequency and power factor.
4. Experimental determination of time constant of series RL, RC circuits.
5. Experimental determination of frequency response of RLC circuits.

*Attested*

  
DIRECTOR  
Centre for Academic Courses  
Anna University, Chennai-600 025

6. Design and Simulation of series resonant circuits.
7. Design and Simulation of parallel resonant circuits.
8. Simulation of three phase balanced and unbalanced star & delta connected networks.
9. Experimental determination of power in a three phase circuits
10. Steady state analysis of series RL and RC circuits

**TOTAL: 75 PERIODS**

**COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

- CO1: Able to understand the basic concepts of electrical circuits.  
 CO2: Ability to compute solutions to first and second order networks  
 CO3: Ability to construct and analyze equation representing AC circuits  
 CO4: Ability to compute circuit representations quantitatively in Laplace domain  
 CO5: Able to construct and analyze two port networks and its parameters

**ELECTROMAGNETIC FIELD LABORATORY**

**LT P C  
0 0 4 2**

**OBJECTIVES:**

- To learn graphical representation of vector fields (using Mathematical Development Tool)
- To formulate electromagnetic field problems
- To compute and analyze electric and magnetic fields for basic configurations using computational software package and compare with the analytical values

- To compute E/H fields for practical applications.
- To measure electric and magnetic fields using field meters

### Graphical Representation of fields (using Mathematical Development Tool)

1. Plotting of vectors ( addition , subtraction, dot product and cross product)
2. Computation and Plotting of gradient and divergence fields
3. Computation and Plotting of Curl fields

### Computation of Electric (E) and Magnetic (H) fields (using FEM/FDM packages) for simple configurations

4. Problem formulation - Boundary conditions - Direct integration method- Concepts of Finite difference method and Finite Element method
5. Computation of Electric field intensity, voltage distribution and capacitance
6. Computation of Magnetic field intensity , inductance and force
7. Calculation of Skin depth
8. Computation of E/H fields for practical applications

### Measurement using field meter

9. Measurement of Electric Fields (E)
10. Measurement of Magnetic fields (H)

**TOTAL : 60 PERIODS**

### COURSE OUTCOMES:

**After completion the above subject, students will be able to understand**

- CO1: Computation, plotting and visual understanding of vectors and vector calculus  
 CO2: Ability to formulate the electromagnetic field problem to solve numerically  
 CO3: Ability to compute and analyze the electrostatic and magneto static field problem  
 CO4: Ability to formulate, solve and analyze EM problems for practical applications  
 CO5: Ability to measure the E/H fields

- To analyze circuit characteristics with signal analysis using Op-amp Ics.
- To design and construct application circuits with Ics as Op-amp, 555, etc.
- To study internal functional blocks and the applications of special ICs like Timers, DAC/ADCs

**i Experiments On Basic Electronic Devices:**

1.Introduction to circuit simulation package by:

- i) PN junction characteristics
- ii) Transistor (CE conf) characteristics
- iii) JFET characteristics.

2. Frequency response of transistor amplifier circuit.

3. Line and load regulation of Zener regulator

4.UJT - relaxation oscillator circuit

5.Wien bridge oscillator

6.Transistorized Differential amplifier

**II Experiments using Linear Integrated Circuits (ICs) :**

7. OPAMP based amplifier circuits :

- i) Inverting amplifier.
- ii) Non-inverting amplifier and voltage follower
- iii) Differential amplifier and Instrumentation amplifier.

8. Design of Adder-subtractor circuits.

9. Square wave oscillator/ tri-angular wave oscillator. 10.OPAMP based RC -phase shift oscillator

11.555 - timer IC based astable multi-vibrator

12. OPAMP based precision rectifier circuit/ clipper circuits.

**TOTAL: 60 PERIODS**

**COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

CO1: Ability to understand the structure and underlying semiconductor physics concepts.

CO2: Ability to design circuits employing electronic devices.

CO3: Analyze, comprehend and design of analog electronic circuits involving OP-AMP

CO4: Analyze, comprehend and design of analog electronic circuits involving timer 555

CO5: Analyze, comprehend and design of analog electronic circuits involving ADC & DAC other specialises.

**OBJECTIVES:**

- To introduce the basic concepts of environment, ecosystems and biodiversity and emphasize on the biodiversity of India and its conservation.
- To impart knowledge on the causes, effects and control or prevention measures of environmental pollution and natural disasters.
- To facilitate the understanding of global and Indian scenario of renewable and non-renewable resources, causes of their degradation and measures to preserve them.
- To familiarize the influence of societal use of resources on the environment and introduce the legal provisions, National and International laws and conventions for environmental protection.
- To inculcate the effect of population dynamics on human and environmental health and inform about human right, value education and role of technology in monitoring human and environmental issues.

**UNIT I ENVIRONMENT, ECOSYSTEMS AND BIODIVERSITY****14**

Definition, scope and importance of environment - need for public awareness - concept of an ecosystem - structure and function of an ecosystem - producers, consumers and decomposers - energy flow in the ecosystem - ecological succession - food chains, food webs and ecological pyramids - Introduction, types, characteristic features, structure and function of the (a) forest ecosystem (b) grassland ecosystem (c) desert ecosystem (d) aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries) - Introduction to biodiversity definition: genetic, species and ecosystem diversity - bio geographical classification of India - value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values - Biodiversity at global, national and local levels - India as a mega-diversity nation - hot-spots of biodiversity - threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts - endangered and endemic species of India - conservation of biodiversity: In-situ and ex-situ conservation of biodiversity. Field study of common plants, insects, birds Field study of simple ecosystems - pond, river, hill slopes, etc.

**UNIT II ENVIRONMENTAL POLLUTION****8**

Definition - causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards - soil waste management: causes, effects and control measures of municipal solid wastes - role of an individual in prevention of pollution - pollution case studies - disaster management: floods, earthquake, cyclone and landslides. Field study of local polluted site - Urban / Rural / Industrial / Agricultural.

**UNIT III NATURAL RESOURCES****10**

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people - Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems - Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies - Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies - Energy resources: Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. case studies - Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification - role of an individual in conservation of natural resources - Equitable use of resources for sustainable lifestyles. Field study of local area to document environmental assets - river / forest / grassland / hill / mountain.

*Attested*

#### UNIT IV SOCIAL ISSUES AND THE ENVIRONMENT

7

From unsustainable to sustainable development - urban problems related to energy - water conservation, rain water harvesting, watershed management - resettlement and rehabilitation of people; its problems and concerns, case studies - role of non-governmental organization- environmental ethics: Issues and possible solutions - climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies. - waste land reclamation - consumerism and waste products - environment protection act - Air (Prevention and Control of Pollution) act - Water (Prevention and control of Pollution) act - Wildlife protection act - Forest conservation act - enforcement machinery involved in environmental legislation- central and state pollution control boards- Public awareness.

#### UNIT V HUMAN POPULATION AND THE ENVIRONMENT

6

Population growth, variation among nations - population explosion - family welfare programme - environment and human health - human rights - value education - HIV / AIDS - women and child welfare - role of information technology in environment and human health - Case studies.

**TOTAL: 45 PERIODS**

#### COURSE OUTCOMES:

**After completion the above subject, students will be able to understand**

- CO1: To recognize and understand the functions of environment, ecosystems and biodiversity and their conservation.
- CO2: To identify the causes, effects and environmental pollution and natural disasters and contribute to the preventive measures in the immediate society.
- CO3: To identify and apply the understanding of renewable and non-renewable resources and contribute to the sustainable measures to preserve them for future generations.
- CO4: To recognize different forms of energy and apply them for suitable applications in for technological advancement and societal development.
- CO5: To demonstrate the knowledge of societal activity on the long and short term environmental issues and abide by the legal provisions, National and International laws and conventions in professional and personal activities and to identify and analyse effect of population dynamics on human value education, consumerism and role of technology in environmental issues.

DIGITAL ELECTRONICS

L T P C 3  
0 0 3

**OBJECTIVES:**

1. To introduce the fundamentals of combinational and sequential digital circuit.
2. To study various number systems and to simplify the mathematical expressions using Boolean functions word problems
3. To study implementation of combinational circuits using Gates` and MSI Devices.
4. To study the design of various synchronous and asynchronous circuits
5. To introduce digital simulation techniques for development of application oriented logic circuit

**UNIT I NUMBER SYSTEMS, BOOLEAN ALGEBRA AND COMBINATIONAL CIRCUITS 9**

Number system, error detection, corrections & codes conversions, Boolean algebra: De-Morgan's theorem, switching functions and minimisation using K-maps & Quine McCluskey method

**UNIT II DESIGN OF COMBINATIONAL LOGIC CIRCUITS USING GATES AND MSI DEVICES 9**

Design of adder, subtractor, comparators, code converters, encoders, decoders, multiplexers and demultiplexers, Realisation of Boolean Functions using MSI devices, memories and PLA.

**UNIT III ANALYSIS AND DESIGN OF SYNCHRONOUS SEQUENTIAL CIRCUITS 9**

Flip flops - SR, D, JK and T, shift registers, counters, state assignments analysis and design of synchronous sequential circuits, state diagram; state reduction

**UNIT IV ANALYSIS AND DESIGN OF ASYNCHRONOUS SEQUENTIAL CIRCUITS 9**

Latches - SR - D ,Asynchronous sequential logic circuits-Transition table, flow table - race conditions - circuits with latches, analysis of asynchronous sequential logic circuits - introduction to design - implication table

**UNIT V LOGIC FAMILIES AND VHDL 9**

Logic families : RTL ad DTL circuits ,TTL ECL NMOS and CMOS : Introduction to VHDL :Design - combinational logic - Types - Operators - Packages - Sequential circuit - Sub programs - Test benches. (Examples: adders, counters, flipflops, FSM, Multiplexers / Demltiplexers).

**TOTAL : 45 PERIODS**

**COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

CO1: To understand and examine the structure of various number systems and its application in digital design to solve real world problems

CO2: Analyze and design combinational logic circuits using gates and MSI devices.

CO3: Analyze and Design synchronous sequential logic circuits using Flip flops and gates

CO4: Analyze and Design Asynchronous sequential logic circuits using Latches and gates

CO5: Selection of logic families and skill development for application specific digital circuit design using VHDL

**EE5402****CONTROL SYSTEMS****LTPC  
3003****OBJECTIVES:**

- To make the students familiarize various representations of systems.
- To make the students analyze the stability of linear systems in time domain and frequency domain.
- To make the students analyze the stability of linear systems in frequency domain.
- To make the students design compensator based on the time and frequency domain Specifications.
- To develop linear models mainly state variable model and Transfer function model

**UNIT I MODELING OF LINEAR TIME INVARIANT SYSTEM (LTIV)****9**

Control system: Open loop and Closed loop - Feedback control system characteristics - First principle modeling: Mechanical, Electrical and Electromechanical systems - Transfer function representations: Block diagram and Signal flow graph.

**UNIT II TIME DOMAIN ANALYSIS****9**

Standard test inputs - Time responses - Time domain specifications - Stability analysis: Concept of stability - Routh Hurwitz stability criterion - Root locus: Construction and Interpretation. Effect of adding poles and zeros

**UNIT III FREQUENCY DOMAIN ANALYSIS****9**

Bode plot, Polar plot and Nyquist plot: - Frequency domain specifications Introduction to closed loop Frequency Response. Effect of adding lag and lead compensators.

**UNIT IV STATE VARIABLE ANALYSIS****9**

State variable formulation - Non uniqueness of state space model - State transition matrix - Eigen values - Eigen vectors - Free and forced responses for Time Invariant and Time Varying Systems - Controllability - Observability

**UNIT V DESIGN OF FEED BACK CONTROL SYSTEM****9**

Design specifications – Lead, Lag and Lag-lead compensators using Root locus and Bode plot techniques -PID controller-Design using reaction curve and Ziegler-Nichols technique- PID control in State Feedback form.

**TOTAL : 45 PERIODS****COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

CO1: Represent simple systems in transfer function and state variable forms.

CO2: Analyse simple systems in time domain.

CO3: Analyse simple systems in frequency domain.

CO4: Infer the stability of systems in time and frequency domain.

CO5: Interpret characteristics of the system and find out solution for simple control problems.

**COURSE OBJECTIVES:**

This course is to provide the fundamental knowledge to the students to

- Understand the concepts of magnetic circuits.
- Understand the concepts of induced emf and torque in both stationary and rotating machines.
- Understand the operation of dc machines.
- Analyse the differences in operation of different dc machine configurations.
- Analyse the single phase and three phase transformers circuits.

**UNIT I MAGNETIC FIELDS AND MAGNETIC CIRCUITS 6**

Review of magnetic circuits - MMF, flux, reluctance, inductance; review of Ampere Law and Biot Savart Law; Visualization of magnetic fields produced by a bar magnet and a current carrying coil - through air and through a combination of iron and air; influence of highly permeable materials on the magnetic flux lines.

**UNIT II ELECTROMAGNETIC FORCE AND TORQUE 9**

B-H curve of magnetic materials; flux-linkage vs current characteristic of magnetic circuits; linear and nonlinear magnetic circuits; energy stored in the magnetic circuit; force as a partial derivative of stored energy with respect to position of a moving element; torque as a partial derivative of stored energy with respect to angular position of a rotating element. Examples - galvanometer coil, relay contact, lifting magnet, rotating element with eccentricity or saliency

**UNIT III DC MACHINES 8**

Basic construction of a DC machine, magnetic structure - stator yoke, stator poles, pole-faces or shoes, air gap and armature core, visualization of magnetic field produced by the field winding excitation with armature winding open, air gap flux density distribution, flux per pole, induced EMF in an armature coil. Armature winding and commutation – Elementary armature coil and commutator, lap and wave windings, construction of commutator, linear commutation Derivation of back EMF equation, armature MMF wave, derivation of torque equation, armature reaction, air gap flux density distribution with armature reaction.

**UNIT IV DC MACHINE - MOTORING AND GENERATION 7**

Armature circuit equation for motoring and generation, Types of field excitations – separately excited, shunt and series. Open circuit characteristic of separately excited DC generator, back EMF with armature reaction, voltage build-up in a shunt generator, critical field resistance and critical speed. V-I characteristics and torque-speed characteristics of separately excited, shunt and series motors. Speed control through armature voltage. Losses, load testing and back-to-back testing of DC machines

**UNIT V TRANSFORMERS 15**

Principle, construction and operation of single-phase transformers, equivalent circuit, phasordiagram, voltage regulation, losses and efficiency Testing - open circuit and short circuit tests polarity test, back-to-back test, separation of hysteresis and eddy current losses Three-phase transformer-construction, types of connection and their comparative features, Parallel operation of single-phase

and three-phase transformers, Autotransformers – construction principle, applications and comparison with two winding transformer, Magnetizing current effect of nonlinear B-H curve of magnetic core material, harmonics in magnetization current Phase conversion - Scott connection, three-phase to six-phase conversion, Tap-changing transformers - No-load and on-load tap-changing of transformers, Three-winding transformers, Cooling of transformers.

**TOTAL : 45 PERIODS**

**NOTE : The question paper for this course can be set with weightage of marks distribution as per the distribution of contact periods**

**COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

- CO1: Understand the concepts of magnetic circuits.
- CO2: Understand the principles of induced emf's and torque in stationary and rotating machines.
- CO3: Understand the operation of dc machines.
- CO4: Analyse the differences in operation of different dc machine configurations.
- CO5: Analyse the single phase and three phase transformers circuits.

**OBJECTIVES**

- To educate the fundamental concepts and characteristics of measurement and errors
- To impart the knowledge on the functional aspects of measuring instruments
- To infer the importance of various bridge circuits used with measuring instruments.
- To educate the fundamental working of sensors and transducers and their applications
- To summarize the overall measurement and instrumentation with the knowledge on digital instrumentation principles.

**UNIT I CONCEPTS OF MEASUREMENTS****6**

Instruments: classification, applications - Elements of a generalized measurement system - Static and dynamic characteristics - Errors in measurement -Statistical evaluation of measurement data.

**UNIT II MEASUREMENT OF PARAMETERS IN ELECTRICAL SYSTEMS****6**

Classification of instruments - moving coil and moving iron meters - Induction type, dynamometer type wattmeters - Energy meter - Megger - Instrument transformers (CT & PT).

**UNIT III AC/DC BRIDGES AND INSTRUMENTATION AMPLIFIERS****6**

Wheatstone bridge, Kelvin double bridge - Maxwell, Hay, Wien and Schering – Errors and compensation in A.C. bridges - Instrumentation Amplifiers.

**UNIT IV TRANSDUCERS FOR MEASUREMENT OF NON- ELECTRICAL PARAMETERS****6**

Classification of transducers - Measurement of pressure, temperature, displacement, flow, angular velocity - Digital transducers - Smart Sensors

**UNIT V DIGITAL INSTRUMENTATION****6**

A/D converters: types and characteristics – Sampling, Errors- Measurement of voltage, Current, frequency and phase - D/A converters: types and characteristics- DSO- Data Loggers – Basics of PLC programming and Introduction to Virtual Instrumentation - Instrument standards.

**TOTAL: 30 PERIODS****COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

CO1: Able to understand the fundamental art of measurement in engineering.

CO2: Able to understand the structural elements of various instruments.

CO3: Able to understand the importance of bridge circuits.

CO4: Able to understand about various transducers and their characteristics by experiments.

CO5: Able to understand the concept of digital instrumentation and virtual instrumentation by experiments.

## OBJECTIVES

- To study the load characteristics of DC machines and transformers
- To determine the performance characteristics of DC machines and transformers using direct and indirect tests.
- To study the different speed control methods of DC shunt motor
- To study the need for starters in DC motors
- To study the various connections in three phase transformers.

*Attested*

## LIST OF EXPERIMENTS

1. Open circuit and load characteristics of a separately excited DC Generator
2. Open circuit and load characteristics of DC shunt Generator
3. Speed control of DC shunt motor.
4. Load test on DC shunt motor.
5. Load test on DC series motor
6. Load test of DC compound motor
7. Swinburne's test.
8. Hopkinson's Test.
9. Open circuit and short circuit test on single-phase transformer.
10. Separation of no load losses in a single phase transformer.
11. Sumpner's test
12. Connections of multi-phase transformers.
13. Study of Starters

**TOTAL : 60 PERIODS**

### COURSE OUTCOMES:

**After completion the above subject, students will be able to understand**

CO1: Steady State Performance characteristics of DC machines and Transformers

CO2: Speed control of DC shunt motor above and below rated speed

CO3: DC motor starters and Three phase transformer connections

CO4: Application of the Predetermination tests on Electrical Machines

CO5: Comparison of performance of different types of DC machines

**OBJECTIVES**

- To make the students familiarize various representations of systems.
- To make the students analyze the stability of linear systems in time domain and frequency domain.
- To make the students design compensator based on the time and frequency domain Specifications.
- To develop linear models mainly state variable model and Transfer function model
- To make the students to design a complete closed loop control system for the physical systems

**LIST OF EXPERIMENTS**

1. Analog (op amp based) simulation of linear differential equations
2. Numerical Simulation of given non linear differential equations
3. Real time simulation of differential equation
4. Mathematical modeling and simulation of physical systems in at least two fields
  - Mechanical
  - Electrical
  - Chemical process
5. System Identification through process reaction curve
6. Stability analysis using Pole zero maps and Routh Hurwitz Criterion in simulation platform
7. Root Locus based analysis in simulation platform
8. Determination of transfer function of a physical system using frequency response and Bode's asymptotes
9. Design of Lag, lead compensators and evaluation of closed loop performance
10. Design of PID controllers and evaluation of closed loop performance
11. Discretization of continuous system and effect of sampling
12. Test of controllability and observability in continuous and discrete domain in simulation platform
13. State feedback and state observer design and evaluation of closed loop performance
14. Mini Project 1: Simulation of complete closed loop control systems including sensor and actuator dynamics
15. Mini Project 2: Demonstration of a closed loop system in hardware

**TOTAL : 60 PERIODS****COURSE OUTCOMES:****After completion the above subject, students will be able to understand**

- CO1: To model and analyze simple physical systems and simulate the performance in analog and digital platform
- CO2: To design and implement simple controllers in standard forms.
- CO3: To design compensators based on time and frequency domain specifications
- CO4: To design a complete closed control loop and evaluate its performance for simple physical systems
- CO5: To analyze the stability of a physical system in both continuous and discrete domain

**HM5403 WORK ETHICS, CORPORATE SOCIAL RESPONSIBILITY AND GOVERNANCE**

**LT P C  
3 0 0 3**

**OBJECTIVES:**

- To impart the value of professional practices with code of conduct and ethical values
- Discuss the various outlooks of roles and responsibilities with work ethics.
- Introduce the Indian constitutional statutes for ethical practices by citizens
- Analyze the ethical commitments to be hold by industry with protecting environment
- Insist on corporate and social responsibilities through Governance practices and regulation

**UNIT I INTRODUCTION 9**

Ethics - Definition & nature, Characteristics, Attributes of Ethics - Business Ethics; Ethical theories; Causes of unethical behavior; Ethical abuses; Work ethics; Code of conduct; Public good.

**UNIT II ETHICS THEORY AND BEYOND 9**

Management of Ethics - Ethics analysis [ Hosmer model ]; Ethical dilemma; Ethics in practice - ethics for managers; Role and function of ethical managers- Comparative ethical behaviour of managers; Code of ethics; Competitiveness, organizational size, profitability and ethics; Cost of ethics in Corporate ethics evaluation.

**UNIT III LEGAL ASPECTS OF ETHICS 9**

Political – legal environment; Provisions of the Indian constitution pertaining to Business; Political setup – major characteristics and their implications for business; Prominent features of MRTP & FERA. Social – cultural environment and their impact on business operations, Salient features of Indian culture and values.

**UNIT IV ENVIRONMENTAL ETHICS 9**

Economic Environment; Philosophy of economic grow and its implications for business, Main features of Economic Planning with respect to business; Industrial policy and framework of government contract over Business; Role of chamber of commerce and confederation of Indian Industries.

**UNIT V CORPORATE SOCIAL RESPONSIBILITY AND GOVERNANCE 9**

Definition- Evolution- Need for CSR; Theoretical perspectives; Corporate citizenship; Business practices; Strategies for CSR; Challenges and implementation; Evolution of corporate governance; Governance practices and regulation; Structure and development of boards; Role of capital market 84 and government; Governance ratings; Future of governance- innovative practices; Case studies with lessons learnt.

**TOTAL : 45 PERIODS**

*Attested*

**COURSE OUTCOMES:****After completion the above subject, students will be able to understand**

CO1: Understand ethical issues in workplace and have good practices in professional duties.

CO2: Learn roles and responsibilities in professional career as a team worker

CO3: Understand the legal aspects in Indian constitutional for protection of societal values

CO4: Analyze the economical development by industry with importance to environment protection

CO5: Understand need of good Governance in a corporate with ethical organizational behavior.

**EE5501****ELECTRICAL MACHINES – II****L T P C  
3 0 0 3****COURSE OBJECTIVES:**

This course provides the fundamental knowledge to the students to

- Understand the concept of windings, MMFs and rotating magnetic fields.
- Understand the operation of ac machines.
- Analyse performance characteristics of ac machines.

**UNIT I FUNDAMENTALS OF AC MACHINE WINDINGS****8**

Physical arrangement of windings in stator and cylindrical rotor; slots for windings; single turn Coil – active portion and overhang; full-pitch coils, concentrated winding, distributed winding, Winding axis, 3D visualization of the above winding types, Air-gap MMF distribution with fixed Current through winding - concentrated and distributed, Sinusoidally distributed winding, Winding distribution factor

**UNIT II PULSATING AND REVOLVING MAGNETIC FIELDS****6**

Constant magnetic field, pulsating magnetic field – alternating current in windings with Spatial displacement, Magnetic field produced by a single winding – fixed current and Alternating current Pulsating fields produced by spatially displaced windings, Windings Spatially shifted by 90 degrees, Addition of pulsating magnetic fields, Three windings spatially shifted by 120 degrees (carrying three-phase balanced currents), revolving magnetic field.

**UNIT III INDUCTION MACHINES****15**

Construction, Types (squirrel cage and slip-ring), Torque Slip Characteristics, Starting and Maximum Torque. Equivalent circuit. Phasor Diagram, Losses and Efficiency. Effect of parameter variation on torque speed characteristics (variation of rotor and stator resistances, stator voltage, frequency). Methods of starting, braking and speed control for induction motors. Generator operation. Self-excitation. Doubly-Fed Induction Machines.

**UNIT IV SINGLE-PHASE INDUCTION MOTORS****6**

Constructional features, double revolving field theory, equivalent circuit, determination of parameters. Split-phase starting methods and applications

**UNIT V SYNCHRONOUS MACHINES****10**

Constructional features, cylindrical rotor synchronous machine - generated EMF, equivalent circuit and phasor diagram, armature reaction, synchronous impedance, voltage regulation. Operating characteristics of synchronous machines, V-curves. Salient pole machine – two reaction theory, analysis of phasor diagram, power angle characteristics. Parallel operation of alternators - synchronization and load division.

**TOTAL : 45 PERIODS**

**NOTE: The question paper for this course can be set with weightage of marks distribution as per the distribution of contact periods**

**COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

CO1: Understand the concepts of windings, MMFs and rotating magnetic fields.

CO2: Understand the operation of ac machines.

CO3: Analyse the performance characteristics of ac machines.

CO4: Analyse the starting and speed control of ac machines.

CO5: Understand the field applications of ac machines.

**EE5502****MICROPROCESSORS AND MICROCONTROLLERS****L T P C****3 0 0 3****OBJECTIVES:**

- To study the addressing modes & instruction set of 8085 & 8051
- To develop skills in simple program writing in assembly languages
- To introduce commonly used peripheral/ interfacing ICs.
- To study and understand typical applications of micro-processors.
- To study and understand the typical applications of micro-controllers

**UNIT I INTRODUCTION TO 8085 ARCHITECTURE 9**

Functional block diagram – Memory interfacing - I/O ports and data transfer concepts - Timing Diagram – Interrupt structure,

**UNIT II 8085 INSTRUCTION SET AND PROGRAMMING 9**

Instruction format and addressing modes – Assembly language format – Data transfer, data manipulation & control instructions - Programming: Loop structure with counting & Indexing - Look up table - Subroutine instructions, stack.

**UNIT III INTERFACING BASICS AND ICS 9**

Study of Architecture and programming of ICs: 8255 PPI, 8259 PIC, 8251 USART, 8279 Key board display controller and 8254 Timer/ Counter - Interfacing with 8085 - A/D and D/A converter interfacing

**UNIT IV INTRODUCTION TO 8051 MICROCONTROLLER 9**

Functional block diagram - Instruction format and addressing modes - Interrupt structure - Timer -I/O ports - Serial communication, Simple programming- key board and display interface - Temperature control system - stepper motor control - Usage of IDE for assembly language programming

**UNIT V INTRODUCTION TO ADVANCED ARCHITECTURE 9**

ARM Cortex-M0 – overview - Programmer's Model - Memory System Overview - System ControlBlock - Microcontroller Start sequence - Inputs and Outputs - Development Flow

**TOTAL: 45 PERIODS****COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

- CO1: Ability to write assembly language program for microprocessor and microcontroller  
 CO2: Ability to design and implement interfacing of peripheral with microprocessor and microcontroller  
 CO3: Ability to analyze, comprehend, design and simulate microprocessor based systems used for control and monitoring..  
 CO4: Ability to analyze, comprehend, design and simulate microcontroller based systems used for control and monitoring.  
 CO5: Ability to understand and appreciate advanced architecture evolving microprocessor field

### **TRANSMISSION AND DISTRIBUTION**

**L T P C  
3 0 0 3**

#### OBJECTIVES:

- To impart knowledge about the configuration of the electrical power system
- To study the line parameters and interference with neighbouring circuits
- To analyse and model different components of power system
- To learn different insulators and underground cables
- To compute sag and conductor length for different weather conditions.

#### **UNIT I                    STRUCTURE OF POWER SYSTEM**

**9**

Structure of electric power system: generation, transmission and distribution; overhead and underground systems, Types of AC and DC distributors-distributed and concentrated loads-voltage tolerances - interconnection-EHVAC and HVDC transmission-Introduction to FACTS.

#### **UNIT II                    TRANSMISSION LINE PARAMETERS**

**9**

Parameters of single and three phase transmission lines with single and double circuits-Resistance, inductance and capacitance of solid ,stranded and bundled conductors, conductor types-Symmetrical and unsymmetrical spacing and transposition-application of self and mutual GMD; skin and proximity effects-Effects of earth on the capacitance of the transmission line - interference with neighbouring communication circuits, corona discharge, factors affecting corona

#### **UNIT III                    MODELLING AND PERFORMANCE OF TRANSMISSION LINES**

**9**

Classification of lines-short line, medium line and long line-Evaluation of A,B,C,D constants-equivalent circuits, phasor diagram, attenuation constant, phase constant, surge impedance and surge impedance loading; transmission efficiency and voltage regulation, real and reactive power flow in lines, Power-circle diagrams, methods of voltage control ;Ferranti effect.

**UNIT IV INSULATORS AND CABLES****9**

Insulators-Types, voltage distribution in insulator string, improvement of string efficiency, Underground cables-Types of cables, Parameters of cable, Grading of cables, Power factor and heating of cables, Capacitance of 3-core belted cable, D.C cables.

**UNIT V MECHANICAL DESIGN OF LINES AND GROUNDING****9**

Mechanical design of transmission line - sag and tension calculations for different weather conditions, Tower spotting, Types of towers, Sub-station Layout (AIS, GIS), Methods of grounding.

**TOTAL: 45 PERIODS****COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

CO1: Ability to understand structure of power system with different voltage levels

CO2: Ability to compute line parameters for different configurations

CO3: Ability to model transmission line and to determine the performance of line

CO4: Ability to choose various insulators and cables for transmission and distribution

CO5: Ability to do mechanical design of transmission line and grounding

**OBJECTIVES**

- To study the performance characteristics of induction motors and synchronous induction motor.
- To study the predetermination of voltage regulation of synchronous generator.
- To study the variation in reluctance in salient pole machine.
- To predetermine the characteristics of single phase and three phase induction motors.

**LIST OF EXPERIMENTS**

1. Predetermination of regulation of three-phase alternator using EMF, MMF and Potier triangle method.
2. Slip test and determination of  $X_d$  and  $X_q$ .
3. No-load and Blocked rotor tests and predetermination of performance of three-phase induction motor.
4. Load test on three phase induction motor.
5. Load test on single phase induction motor.
6. Study of starters of three phase induction motors.
7. V-curves and Inverted V-curves of synchronous motor.
8. No-load and blocked rotor tests and predetermination of performance of single phase induction motor.
9. Load test on synchronous induction motor.
10. Load characteristics of induction generator.
11. Characteristics of permanent magnet machines.
12. Characteristics of BLDC machines.

**TOTAL: 60 PERIODS****COURSE OUTCOMES:****After completion the above subject, students will be able to understand**

CO1: Performance characteristics of induction and synchronous machines using direct and in direct methods.

CO2: Regulation of three phase alternator using the predetermination methods

CO3: Saliency nature of synchronous machine.

CO4: Performance of single-phase induction motor.

CO5: Starting and Speed control of ac machines.

**OBJECTIVES:**

- To perform simple arithmetic operations using assembly language program and study the addressing modes & instruction set of 8085 & 8051
- To develop skills in simple program writing in assembly languages
- To write an assembly language program to convert Analog input to Digital output and Digital input to Analog output.
- To perform interfacing experiments with  $\mu$ P8085 and  $\mu$ C8051
- To study various digital integrated circuits used in simple system configuration.

Programming exercises / Experiments with  $\mu$ P8085:

1. Simple arithmetic operations: Multi precision addition / subtraction / multiplication / division.
2. Programming with control instructions: Increment / Decrement, Ascending / Descending order, Maximum / Minimum of numbers, rotate instructions, Hex / ASCII / BCD code conversions.
3. Interface Experiments:  
A/D Interfacing.  
D/A Interfacing.  
Traffic light controller
4. Stepper motor controller interface.  
Programming exercises / Experiments with  $\mu$ C8051:
5. Simple arithmetic operations with 8051: Multi precision addition / subtraction / multiplication / division.
6. Programming with control instructions: Increment / Decrement, Ascending / Descending order, Maximum / Minimum of numbers, Rotate instructions, Hex / ASCII / BCD code conversions.
7. Interface Experiments:  
A/D Interfacing.  
D/A Interfacing.  
Traffic light controller
8. Stepper motor controller interface.  
Experiments with Digital ICs :
9. Study of Basic Digital IC's.  
(Verification of truth table for AND, OR, EXOR, NOT, NOR, NAND, JK FF, RS, FF, D FF)
10. Implementation of Boolean Functions, Adder/ Subtractor circuits ; Realizing given function with minimum number of gates by minimization methods.
11. Study of binary / BCD counters, modulo-n counters
12. Design and implementation of Synchronous sequential counters.
13. Programming ARM architecture with software tools

**TOTAL : 60 PERIODS****COURSE OUTCOMES:****After completion the above subject, students will be able to understand**

- CO1: Ability to design and implement combinational logic circuits and to analysis simple sequentiallogic circuits.
- CO2: Ability to write assembly language program for microprocessor and microcontroller
- CO3: Ability to design and implement interfacing of peripheral with microprocessor and microcontroller
- CO4: Ability to analyze, comprehend, design and simulate microprocessor based systems used for control and monitoring..
- CO5: Ability to analyze, comprehend, design and simulate microcontroller based systems used for control and monitoring.

POWER SYSTEM ANALYSIS

L T P C  
3 0 0 3

**OBJECTIVES:**

- To impart knowledge on the need for “power system analysis” and model various power system components.
- To formulate the power balance equations and to conduct the power flow analysis by Gauss-Seidel and Newton-Raphson methods.
- To model and carry out short circuit studies of power system for symmetrical faults and to determine the fault levels of different buses.
- To learn about the symmetrical components and their application to carry out short circuit studies of power system for unsymmetrical faults and to determine the fault levels of different buses.
- To model and analyze the stability of the power system due to balanced faults by equal area criteria and explicit integration methods.

**UNIT I POWER SYSTEM OVERVIEW**

9

Need for system planning and operational studies - Power scenario in India - Power system components - Representation - Single line diagram - per unit quantities - p.u. impedance diagram - p.u. reactance diagram - Network graph, Bus incidence matrix, Primitive network-, Bus admittance matrix from primitive parameters - Representation of off-nominal transformer - Formation of bus admittance matrix of large power network.

**UNIT II POWER FLOW ANALYSIS**

9

Significance of Power Flow Analysis in planning and operation- Formulation of Power Flow problem in polar coordinates - Bus classification - - Power flow solution using Gauss-Seidel method - Handling of Voltage controlled buses - Power Flow Solution by Newton-Raphson method.

**UNIT III SYMMETRICAL FAULT ANALYSIS**

9

Importance of short circuit studies-Assumptions in short circuit analysis - Symmetrical short circuit analysis using Thevenin’s theorem - Bus Impedance matrix by building algorithm (without mutual coupling) - Symmetrical fault analysis through bus impedance matrix - Post fault bus voltages - Fault level - Current limiting reactors.

**UNIT IV UNSYMMETRICAL FAULT ANALYSIS**

9

Symmetrical components - Sequence impedances – Sequence circuits of synchronous machine, transformer and transmission line-Sequence networks - Analysis of unsymmetrical faults: single-line-to-ground, line-to-line and double-line-to-ground using Thevenin’s theorem and Z-Bus- computation of

post fault currents in symmetrical component and phasor domains.

**UNIT V STABILITY ANALYSIS**

**9**

Importance of stability studies-Classification of power system stability: rotor angle stability and voltage stability -Single Machine Infinite Bus (SMIB) system: Development of swing equation - Equal area criterion - Critical clearing angle and time -solution of the swing equation – modified Euler method and Runge-Kutta fourth order method.

**TOTAL: 45 PERIODS**

**COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

CO1: Model the various power system components for steady-state analysis.

CO2: Carry out the power flow analysis by Gauss-Seidel and Newton-Raphson methods.

CO3: Conduct the fault analysis of power system for balanced faults.

CO4: Carry out the short circuit analysis of the power system for unbalanced faults using symmetrical component theory.

CO5: Compute the stability of the system with the help of equal area criteria and Modified-Euler and Runge-Kutta fourth order methods.

*Attested*

**OBJECTIVES:**

- To understand the various applications of Power electronic devices for conversion, control and conditioning of the electrical power and to get an overview of different types of power semiconductor devices and their dynamic characteristics.
- To understand the operation, characteristics and performance parameters of controlled rectifiers
- To study the operation, switching techniques and basics topologies of DC-DC switching regulators.
- To learn the different modulation techniques of pulse width modulated inverters and to understand harmonic reduction methods.
- To study the operation of AC voltage controller and various configurations of AC voltage controller.

**UNIT I SWITCHING POWER SUPPLIES****9**

MOSFET dynamic behaviour - driver and snubber circuits - low power high switching frequency switching Power supplies, buck, boost, buck-boost converters – Isolated topologies – resonant converters - switching loss calculations and thermal design.

**UNIT II INVERTERS****9**

IGBT : Static dynamic behaviour - single phase half bridge and full bridge inverters - VSI :(1phase and three phase inverters square wave operation) - Voltage control of inverters single, multi pulse, sinusoidal, space vector modulation techniques- various harmonic elimination techniques-CSI

**UNIT III UNCONTROLLED RECTIFIERS****9**

Power Diode - half wave rectifier - mid-point secondary transformer based full wave rectifier - bridge rectifier - voltage doubler circuit - distortion factor - capacitor filter for low power rectifiers - LC filters - Concern for power quality - three phase diode bridge.

**UNIT IV CONTROLLED RECTIFIERS****9**

SCR-Two transistor analogy based turn- ON - turn ON losses - thermal protection - controlled converters (1 pulse, 2 pulse, 3 pulse, 6 pulse) - displacement factor - ripple and harmonic factor - power factor mitigation, performance parameters - effect of source inductance - inverter angle limit.

**UNIT V AC PHASE CONTROLLERS****9**

TRIAC triggering concept with positive and negative gate pulse triggering, TRIAC based phase controllers - various configurations for SCR based single and three phase controllers.

**TOTAL : 45 PERIODS****COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

CO1: To understand operation of semiconductor devices and dynamic characteristics and to design & analyze low power SMPS

CO2: Analyze the various uncontrolled rectifiers and design suitable filter circuits

CO3: Analyze the operation of the n-pulse converters and evaluate the performance parameters

CO4: Understand various PWM techniques and apply voltage control and harmonic elimination methods to inverter circuits.

CO5: Understand operation of AC voltage controllers and its applications

PROTECTION AND SWITCHGEAR

LTPC  
3003

### OBJECTIVES:

- To teach the principles and need for protection schemes by different fault current calculations
- To teach the basic principles, construction and characteristics of different Electromagnetic relays
- To learn to protect different power equipments like transformer, generator etc.,
- To teach different aspects of static relays and numerical protection schemes
- To learn the principles, construction and problems associated with different types of circuit breaker

### UNIT I PROTECTION SCHEMES

6

Principles and need for protective schemes - nature and causes of faults - types of faults- fault current calculation – Zones of protection and essential qualities of protection. Methods of Neutral grounding.

### UNIT II ELECTROMAGNETIC RELAYS

9

Operating principles of relays - Torque equation - R-X diagram - Electromagnetic Relays - Over current, Directional, Distance, Differential, Negative sequence and Under frequency relays.

### UNIT III APPARATUS PROTECTION

9

Application of Current transformers and Potential transformers in protection schemes -Sources of error. Protection of transformer, generator, motor, bus bars and transmission line.

### UNIT IV STATIC RELAYS AND NUMERICAL PROTECTION

9

Static relays - Phase, Amplitude Comparators - Synthesis of various relays using Static comparators – Block diagram of Numerical relays – Over current protection, transformer differential protection, distant protection of transmission lines.

*Attested*

**UNIT V CIRCUIT BREAKERS****12**

Physics of arcing phenomenon and arc interruption - DC and AC circuit breaking - re-striking voltage and recovery voltage - rate of rise of recovery voltage - current chopping - interruption of capacitive current - resistance switching- Types of circuit breakers - air, oil, SF6 and vacuum circuit breakers - comparison of different circuit breakers - Rating and selection of Circuit breakers.

**TOTAL: 45 PERIODS****COURSE OUTCOMES:****After completion the above subject, students will be able to understand**

- CO1: Ability to analyse different types of faults and their effects on the power system and understand the practical significance of protection zones  
 CO2: Understanding the basic principles, construction and characteristics of different Electromagnetic relays  
 CO3: Ability to protect different power equipments like transformer, generator etc., against various electrical faults  
 CO4: Understanding different aspects of static relays and numerical protection schemes  
 CO5: Able to understand the principles, construction, selection and problems associated with Different types of circuit breaker

**OBJECTIVES:**

- To study the VI characteristics of SCR, TRIAC, MOSFET and IGBT.
- To analyze the performance of semiconverter, full converter, step up, step down choppers by simulation and experimentation.
- To study the behaviour of voltage waveforms of PWM inverter applying various modulation techniques
- To design and analyze the performance of SMPS
- To study the performance of AC voltage controller by simulation and Experimentation.

- Characteristics of SCR and TRIAC
- Characteristics of MOSFET and IGBT
- AC to DC half controlled converter
- AC to DC fully controlled Converter
- Step down and step up MOSFET based choppers
- IGBT based single phase PWM inverter
- IGBT based three phase PWM inverter
- AC Voltage controller
- Switched mode power converter.
- Simulation of PE circuits (1 $\Phi$ &3 $\Phi$ semiconverter, 1 $\Phi$ & 3 $\Phi$ fullconverter, dc-dc converters ,ac voltage controllers).

**TOTAL: 60 PERIODS****COURSE OUTCOMES:****After completion the above subject, students will be able to understand**

CO1: Determine the characteristics of SCR, IGBT, TRIAC, MOSFET and IGBT

CO2: Understand the performance of AC voltage controllers by simulation and experimentation.

and Find the transfer characteristics of full converter, semi converter, step up and step downchoppers by simulation experimentation.

CO3: Analyze the voltage waveforms for PWM inverter using various modulation techniques.

CO4: Design and experimentally verify the performance of basic DC/DC converter topologies used for SMPS.

**OBJECTIVES:**

- To design armature and field systems for D.C. machines.
- To design core, yoke, windings and cooling systems of transformers.
- To design stator and rotor of induction machines and synchronous machines.

**LIST OF EXPERIMENTS**

1. Design of field system
2. Design of solenoid , relay
3. Design of Field Windings of DC machine
4. Design of armature winding of DC machine
5. Calculation of Armature Main Dimensions of DC machine
6. Complete design of DC machine and performance evaluation calculation
7. Transformer electrical design
8. Transformer thermal design
9. Complete design of a transformer and performance evaluation calculation
10. Stator design of AC machine
11. Rotor design of Induction motor
12. Complete design of a Induction motor and performance evaluation calculation
13. Complete design of a synchronous machine and performance evaluation calculation
14. Mini project: Design of special machines like PMDC / BLDC/SRM/PMSM

**TOTAL: 60 PERIODS****COURSE OUTCOMES:****After completion the above subject, students will be able to understand**

CO1: Ability to design armature and field systems for D.C. machines.

CO2: Ability to draw the winding diagram

CO3: Ability to design transformers.

CO4: Ability to design stator and rotor of induction machines and synchronous machines.

CO5: Ability to design special machines using computer

**OBJECTIVES:**

- To understand steady state operation and transient dynamics of a motor load system.
- To study and analyze the operation of the converter / chopper fed dc drive, both qualitatively and quantitatively.
- To study and understand the operation and performance of AC Induction motor drives.
- To study and understand the operation and performance of AC Synchronous motor drives.
- To analyze and design the current and speed controllers for a closed loop solid state DC motor drives.

**UNIT I DRIVE CHARACTERISTICS 9**

Electric drive - Equations governing motor load dynamics - steady state stability - multi quadrant Dynamics: acceleration, deceleration, starting & stopping - typical load torque characteristics - Selection of motor.

**UNIT II CONVERTER / CHOPPER FED DC MOTOR DRIVE 9**

Steady state analysis of the single and three phase converter fed separately excited DC motor drive - continuous and discontinuous conduction - Time ratio and current limit control - 4 quadrant operation of converter / chopper fed drive.

**UNIT III INDUCTION MOTOR DRIVES 9**

Stator voltage control - energy efficient drive - v/f control - constant air gap flux - field weakening mode - voltage / current fed inverter - closed loop control.

**UNIT IV SYNCHRONOUS MOTOR DRIVES 9**

V/f control and self-control of synchronous motor: Margin angle control and power factor control – permanent magnet synchronous motor.

**UNIT V DESIGN OF CONTROLLERS FOR DRIVES 9**

Transfer function for DC motor / load and converter – closed loop control with current and speed feedback – armature voltage control and field weakening mode – design of controllers; current controller and speed controller-converter selection and characteristics.

**TOTAL : 45 PERIODS****COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

- CO1: Understand the basic requirements of motor selection for different load profiles.  
 CO2: Analyse the steady state behavior and stability aspects of drive systems.  
 CO3: Simulate the DC drive using converter and chopper control.  
 CO4: Simulate the AC drive.  
 CO5: Design the controller for electrical drives.

**EE5702**

**POWER SYSTEM OPERATION AND CONTROL**

**LT P C  
3 0 0 3**

#### OBJECTIVES:

To impart knowledge on the

- Significance of power system operation and control.
- Real power-frequency interaction and design of power-frequency controller.
- Reactive power-voltage interaction and the compensators for maintaining the voltage profile.
- Generation scheduling and economic operation of power system.
- SCADA and its application for real time operation and control of power systems.

#### UNIT I INTRODUCTION

**9**

Power scenario in Indian grid – National and Regional load dispatching centers – requirements of good power system - necessity of voltage and frequency regulation - real power vs frequency and reactive power vs voltage control loops - system load variation, load curves - load forecast - basic concepts of economic dispatch - unit commitment - load shedding and islanding - deregulation - Tariff: characteristics & types.

#### UNIT II REAL POWER - FREQUENCY CONTROL

**9**

Basics of speed governing mechanisms and modeling - speed regulation of two generators in parallel - Load Frequency Control (LFC) of single area system - static and dynamic analysis - LFC of two area system - tie line modeling - block diagram representation of two area system - static and dynamic

*Attested*

analysis - tie line with frequency bias control - state variable model - integration of economic dispatch control with LFC.

**UNIT III REACTIVE POWER – VOLTAGE CONTROL 9**

Generation and absorption of reactive power - basics of reactive power control – Automatic Voltage Regulator (AVR) – brushless AC excitation system – block diagram representation of AVR loop - static and dynamic analysis - stability compensation - voltage drop in transmission line - methods of reactive power injection - tap changing transformer, SVC and STATCOM for voltage control.

**UNIT IV ECONOMIC OPERATION OF POWER SYSTEM 9**

Statement of economic dispatch problem - input and output characteristics of thermal plant - incremental cost curve - optimal operation of thermal units without and with transmission losses (no derivation of transmission loss coefficients) - lambda-iteration method - base point and participation factors method. Statement of Unit Commitment (UC) problem - constraints on UC problem - solution of UC problem using priority list – special aspects of short term and long term hydrothermal scheduling problems.

**UNIT V COMPUTER CONTROL OF POWER SYSTEM 9**

Need of computer control of power system - concept of energy control centers and functions - PMU - system monitoring, data acquisition and controls - System hardware configurations - SCADA and EMS functions - state estimation – measurements and errors - weighted least square estimation - various operating states - state transition diagram.

**TOTAL : 45 PERIODS**

**COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

- CO1: Analyze the day-to-day operation of electric power system.
- CO2: Analyze the control actions that are implemented to meet the minute-to-minute variation of system real power demand.
- CO3: Analyze the compensators for reactive power control.
- CO4: Prepare day ahead and real time economic generation scheduling.
- CO5: Understand the necessity of computer control of power systems.

**HIGH VOLTAGE ENGINEERING**

**LT P C  
3 0 0 3**

### OBJECTIVES:

- To teach over voltage phenomenon and insulation coordination in electrical Power systems
- To impart knowledge on breakdown mechanisms of different dielectrics
- To learn about high voltage and high current generation techniques
- To teach the different measurements techniques of high voltages & currents
- To learn how to conduct dielectric tests on various electrical equipment and about safety precautions in HV Labs

### **UNIT I OVER VOLTAGES IN ELECTRICAL POWER SYSTEMS**

**6**

Causes of over voltages and its effects on power system – Lightning, switching surges and temporary over voltages – Estimation of over voltages- Reflection and Refraction of Travelling waves- Protection against over voltages, surge diverters, surge modifiers.

### **UNIT II DIELECTRIC BREAKDOWN**

**12**

Gaseous breakdown in uniform and non-uniform fields - Corona discharges - Vacuum breakdown - Characteristics, Conduction and breakdown in pure and commercial liquids, Maintenance of oil Quality - Breakdown mechanisms in solid and composite dielectrics.

### **UNIT III GENERATION OF HIGH VOLTAGES AND HIGH CURRENTS**

**9**

Generation of High DC, AC, impulse voltages and currents - Triggering and control of impulse generators.

### **UNIT IV MEASUREMENT OF HIGH VOLTAGES AND HIGH CURRENTS**

**9**

High Resistance with series ammeter - Dividers, Resistance, Capacitance and Mixed dividers -Peak Voltmeter, Generating Voltmeters - Capacitance Voltage Transformers, Electrostatic Voltmeters - Sphere Gaps - High current shunts- Digital techniques in high voltage measurement.

### **UNIT V HIGH VOLTAGE TESTING OF EQUIPMENT AND HIGH VOLTAGE LABORATORIES**

**9**

High voltage testing of electrical power apparatus as per International and Indian standards – Power frequency, impulse voltage and DC testing of Insulators, bushing, isolators, circuit breakers and transformers, high voltage laboratory layout, indoor and outdoor laboratories, testing facility requirements, safety precautions in H.V. Labs.

**TOTAL: 45 PERIODS**

- Note- Generation , Measurement of High Voltages and Testing of Power Apparatus to be demonstrated in High voltage Laboratory

### COURSE OUTCOMES:

**After completion the above subject, students will be able to understand**

CO1: Understanding the over voltage phenomenon and insulation coordination in electrical Power systems

CO2: Ability to understand the various breakdown mechanisms of different dielectrics

CO3: Able to analyse and generate high voltage and high current

CO4: Understanding measurements techniques of high voltages & currents with their relative merits and demerits

CO5: Ability to conduct dielectric tests on various electrical equipment with safety precautions in HV Labs

**OBJECTIVES:**

- To provide better understanding of modeling of transmission lines in impedance and admittance forms.
- To apply iterative techniques for power flow analysis.
- To carry out short circuit and stability studies on power system.
- To analyze the load - frequency and voltage controls.
- To analyze optimal dispatch of generators and perform state estimation

**LIST OF EXPERIMENTS**

- 1 Computation and Modelling of Transmission Lines
- 2 Formation of Bus Admittance and Impedance Matrices
- 3 Power Flow Analysis using Gauss-Seidel Method
- 4 Power Flow Analysis using Newton Raphson Method
- 5 Symmetric and unsymmetric fault analysis
- 6 Transient stability analysis of SMIB System
- 7 Load - Frequency Dynamics of Single-Area and Two-Area Power Systems
- 8 Stability analysis of AVR
- 9 Voltage control with SVC and STATCOM
- 10 Economic Dispatch in Power Systems
- 11 State estimation: WLSE

**TOTAL : 60 PERIODS****COURSE OUTCOMES:****After completion the above subject, students will be able to understand**

CO1: Model the transmission lines.

CO2: Perform power evacuation studies for future generation and transmission system planning.

CO3: Analyze the day-to-day operation of power system with respect to voltage and frequency.

CO4: Analyze the stability of AVR.

CO5: Perform optimal scheduling of generators and compute the state of the power system.

**OBJECTIVES:**

- To understand the basic concepts in C Programming Language.
- To introduce the students to the basic data structures such as arrays, stacks and queues
- To teach the concept of pointers and string handling in C
- To learn about files and various operations on files
- To develop C programs for implementing simple data structures, sorting and searching techniques.

**UNIT I C PROGRAMMING BASICS 9**

Activities in solving problems using Computers: Defining and Analyzing - Algorithm Development - Writing a Computer Program - Testing and Debugging - Documenting - Program Maintenance. Reason for Choosing C Language - Features of C Language - Advantages and Disadvantages of using C - Creating C Programs: Editing - Creating an Executable (Compile and Link Process). Overview of C Programming - Dissecting a Simple C Program - Pre-processor - Built-in Data types, Constants and Variables - Classification of Operators and their Precedence - Type Conversions - Expression Evaluation - Formatted Input/Output - Decision Making - Loops - Control Flow - Simple C Programs.

**UNIT II FUNCTIONS AND ARRAYS 9**

Functions in C - Designing Structured Programs - Return Types in Functions - Storage Classes - Scope - Passing Arguments: Call by Value and Call by Reference - Type Qualifiers - Recursion and Recursive Functions - Example C Programs. Arrays: Concepts - Using Arrays in C - Single and Multi-Dimensional Arrays in C - Simple C Programs using Arrays: Array order Reversal - Array Counting and Histogramming - Finding the Maximum Number and its Position in an Array.

**UNIT III POINTERS AND STRINGS 9**

Pointers: Basic Concepts - Pointers for inter function communication - Pointers to Pointers - Pointer Applications - Arrays and Pointers - Pointer Arithmetic and arrays - Passing an array to a function - Memory Allocation functions - Array of pointers - Programming Applications - Pointers to void - Pointers to Functions. Strings: Concepts - C Strings - String Input / Output Functions - Arrays of strings - String Manipulation Functions - String / Data conversion - C program examples

**UNIT IV STRUCTURING DATA AND FILES 9**

Enumerated, Structure and Union Types - The Type Definition, Enumerated types, Structures - Declaration, initialization, accessing structures, operations on structures, Complex structures, structures and functions, Passing structures through pointers, self referential structures, unions, bit fields, C programming examples - Command Line Arguments. Files: Concept of a File - Streams - Text files and binary files - Differences between Text and Binary files - Opening and Closing Files - File Input/Output Functions - File Status Functions - Positioning functions - C program examples.

**UNIT V Simple Programs in C 9**

Simple Programs: Sine Function Computation - Raising a Number a Larger Power. Programs for Array Processing: Removal of Duplicates from an Ordered Array - Partitioning an Array - Implementing Stacks and Queues using Arrays. Searching and Sorting: Sorting by Selection - Sorting by Exchange - Sorting by Insertion - Sorting by Diminishing Increment - Sorting by Partitioning - Linear and Binary search methods.

*Attested*

*Attested*

**COURSE OUTCOMES:**

After completion the above subject, students will be able to understand

CO1: Develop modular programs using C

CO2: Develop programs for implementing simple data structures in C

CO3: Write programs for Array processing, Sorting and Searching

CO4: Confidence to develop C programs for complex problems

CO5: Confidence to learn any programming language on his own

**EE5002****EMBEDDED SYSTEM DESIGN****LT P C  
3 0 0 3****OBJECTIVES:**

- Introduction to Building Blocks of a Embedded System and software Tools
- To understand role of Input/output interfacing with Bus Communication protocol.
- To understand ISR and scheduling for multitask process.  
Introduce the basics of a Real time operating system
- Example tutorials to discuss applications based on embedded design approaches

**UNIT I INTRODUCTION TO EMBEDDED SYSTEMS****9**

Introduction to Embedded Systems - The build process for embedded systems- Structural units for a Embedded microcontroller , selection of processor & memory devices- DMA - Memory management methods- Timer and Counting devices, Watchdog Timer, Real Time Clock-- IDE, assembler, compiler, linker, simulator, debugger, Incircuit emulator, Target Hardware Debugging, Boundary Scan

**UNIT II EMBEDDED NETWORKING****9**

Embedded Networking: Introduction, I/O Device Ports & Buses- Serial Bus communication protocols - RS232 standard - RS485 - USB Bus -Serial Peripheral Interface (SPI) - Inter Integrated Circuits (I<sup>2</sup>C)

**UNIT III INTERRUPTS SERVICE MECHANISM AND DEVICE DRIVERS****9**

Programmed-I/O busy-wait approach without interrupt service mechanism-ISR concept-interrupt sources - multiple interrupts - context and periods for context switching, interrupt latency and deadline - Introduction to Device Drivers

**UNIT IV RTOS BASED EMBEDDED SYSTEM DESIGN****9**

Introduction to basic concepts of RTOS- Task, process & threads, interrupt routines in RTOS, Multiprocessing and Multitasking, Preemptive and non-preemptive scheduling, Task communication-shared memory, message passing-, Interprocess Communication – synchronization between processes-semaphores, Mailbox, pipes, priority inversion, priority inheritance, comparison of commercial Real time Operating systems: VxWorks, µC/OS-II, RT Linux

**UNIT V EMBEDDED SYSTEM APPLICATION WITH DEVELOPMENT****9**

Case Study: Washing Machine- Automotive Application- RFID- System, Application, Embedded Product Development Life Cycle, Objective, Need, and different Phases & Modelling of the EDLC

**TOTAL: 45 PERIODS****COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

- CO1: Able to understand the hardware functionals and software strategies required to develop various Embedded systems  
 CO2: Understanding of the basic differences of various Bus communication standards  
 CO3: Learn to incorporate interface as Interrupt services  
 CO4: Observe various scheduling algorithms through Real time operating system.  
 CO5: Ability to involve embedded concepts for developing automation applications.

**OBJECTIVES:**

- To provide knowledge of the operation and dynamics of electrical vehicles
- To impart knowledge on vehicle control for standard drive cycles of electrical vehicles (EVs)
- To estimate the energy requirement of EVs and Hybrid Electric Vehicles (HEVs)
- To provide knowledge about different energy sources and energy management in HEVs  
o provide knowledge of supervisory control of EVs

**UNIT I ELECTRIC VEHICLE ARCHITECTURE 9**

History of evolution of Electric Vehicles - Series parallel architecture of Hybrid Electric Vehicles (HEV) – Plug-in Hybrid Electric Vehicles (PHEV)- Power train components and sizing, Gears, Clutches, Transmission and Brakes.

**UNIT II MECHANICS OF ELECTRIC VEHICLES 9**

Fundamentals of vehicle mechanics - tractive force, power and energy requirements for standard drive cycles of EV's - motor torque and power rating and battery capacity.

**UNIT III CONTROL OF DC AND AC MOTOR DRIVES 9**

Speed control for constant torque, constant HP operation of all electric motors - DC/DC chopper based four quadrant operation of DC motor drives, inverter based V/f Operation (motoring and braking) of induction motor drives, vector control operation of Induction motor and PMSM, Brushless DC motor drives, Switched reluctance motor (SRM) drives.

**UNIT IV ENERGY STORAGE SYSTEMS 9**

**Battery:** Principle of operation, types, models, SOC of battery, Traction Batteries and their capacity for standard drive cycles. **Alternate sources:** Fuel cells, Ultra capacitors, Fly wheels.

**UNIT V HYBRID VEHICLE CONTROL STRATEGY 9**

HEV supervisory control - Selection of modes - power spilt mode - parallel mode - engine brake mode - regeneration mode - series parallel mode.

**TOTAL : 45 PERIODS****COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

CO1: Understand the architecture and dynamics of EVs and HEVs

CO2: Design an EV for standard drive cycle

CO3: Understand the electrical motors' characteristics and its application for vehicle dynamics

CO4: Workout the energy requirements and energy sources for EV application

CO5: Mode of operation and control architecture

ANALYSIS OF ELECTRICAL MACHINES

LT P C  
3 0 0 3

## OBJECTIVES:

- To understand the fundamentals of magnetic circuits, energy, force and torque of multi-excited systems.
- To analyze the steady state and dynamic state operation of DC machine through mathematical modeling and simulation in digital computer.
- To understand the theory of transformation of three phase variables to two phase variables.
- To analyse the steady state and dynamic state operation of three-phase induction machines using transformation theory based mathematical modeling and digital computer simulation.
- To analyse the steady state and dynamic state operation of three-phase synchronous machines using transformation theory based mathematical modeling and digital computer simulation.

### UNIT I PRINCIPLES OF ELECTROMAGNETIC ENERGY CONVERSION 9

Magnetic circuits, permanent magnet, dynamic induced emf and dynamic torque - stored magnetic energy, co-energy - force and torque in singly and doubly excited systems - machine windings and air gap mmf- determination of winding resistances and inductances – determination of friction coefficient and moment of inertia of electrical machines.

### UNIT II DC MACHINES 9

Elementary DC machine and analysis of steady state operation - Voltage and torque equations – dynamic characteristics of permanent magnet and shunt d.c. motors - electrical and mechanical time constants - Time domain block diagrams -transfer function of d.c. motor responses - digital computer simulation of permanent magnet and shunt d.c. machines.

### UNIT III REFERENCE FRAME THEORY 9

Historical background of Clarke and Park transformations – power invariance and phase transformation and commutator transformation – transformation of variables from stationary to arbitrary reference frame - variables observed from several frames of reference.

### UNIT IV INDUCTION MACHINES 9

Three phase induction machine, equivalent circuit and analysis of steady state operation – free acceleration characteristics – voltage and torque equations in machine variables and arbitrary reference frame variables – analysis of dynamic performance for supply excitation and load torque variations - digital computer simulation of three phase induction machines.

### UNIT V SYNCHRONOUS MACHINES 9

Three phase synchronous machine and analysis of steady state operation - voltage and torque equations in machine variables and rotor reference frame variables (Park's equations) – analysis of Dynamic performance for supply excitation and load torque variations - digital computer simulation of synchronous machines.

*Attested*  
TOTAL : 45 PERIODS

## COURSE OUTCOMES:

After completion the above subject, students will be able to understand

CO1: Understand the magnetic circuits and force components of electrical machines

CO2: Understand the transformation theory and its need for machine modeling

CO3: Acquire and apply the knowledge of machine dynamics in Electrical engineering.

CO4: Model, simulate and analyze the dynamic performance of electrical machines using computational software.

CO5: Formulate, design, simulate power supplies and loads to analyse complete electrical machine performance

DESIGN OF ELECTRICAL APPARATUS

LT P C

3 0 0 3

## OBJECTIVES:

- To provide sound knowledge about constructional details and design of various electrical machines, in order
- To study magnetic circuit parameters and thermal rating of various types of electrical machines.
- To design armature and field systems for D.C. machines.
- To design core, yoke, windings and cooling systems of transformers
- To design stator and rotor of induction machines and synchronous machines.

## UNIT I DESIGN OF FIELD SYSTEM AND ARMATURE

9

Major considerations in Electrical Machine Design - Materials for Electrical apparatus - Design of Magnetic circuits - Magnetising current - Calculation of MMF - Leakage in Armature. Design of lap winding and wave winding- Introduction to Computer aided design.

## UNIT II DESIGN OF TRANSFORMERS

9

Construction - KVA output for single and three phase transformers - Overall dimensions - design of yoke, core and winding for core and shell type transformers - Estimation of No load current - Temperature rise in Transformers - Design of Tank and cooling tubes of Transformers. Computer program: Complete Design of single phase core transformer

Attested

**UNIT III DESIGN OF DC MACHINES****9**

Construction - Output Equations - Main Dimensions - Choice of specific loadings - Selection of number of poles - Design of Armature - Design of commutator and brushes - design of field  
Computer program: Design of Armature main dimensions

**UNIT IV DESIGN OF INDUCTION MOTORS****9**

Construction - Output equation of Induction motor - Main dimensions - choice of specific loadings - Design of squirrel cage rotor and wound rotor - Operating characteristics : Magnetizing current - Short circuit current - Circle diagram -Computer program:Design of slip-ring rotor.

**UNIT V DESIGN OF SYNCHRONOUS MACHINES****9**

Output equations - choice of specific loadings - Design of salient pole machines - Short circuit ratio - Armature design - Estimation of air gap length - Design of rotor -Design of damper winding - Determination of full load field mmf - Design of field winding - Design of turboalternators -Computer program: Design of Stator main dimensions-Brushless DC Machines

**TOTAL : 45 PERIODS****COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

CO1: Ability to understand basics of design considerations for rotating and static electrical machines

CO2: Ability to design single and three phase transformer.

CO3: Ability to design armature and field of DC machines.

CO4: Ability to design stator and rotor of induction motor.

CO5: Ability to design and analyze synchronous machines.

**OBJECTIVES:**

- To study the concepts behind economic analysis and Load management.
- To analyse the material and energy balance
- To learn the methods to improve the energy efficiency in thermal utilities.
- To understand the concept of compressed air system and its energy efficiency.
- To emphasize the energy management on various electrical equipments and metering.

**UNIT I GENERAL ASPECTS OF ENERGY MANAGEMENT AND ENERGY AUDIT 9**

Commercial and Non-commercial energy - final energy consumption - energy needs of growing economy - energy pricing - energy conservation and its importance - Re-structuring of the energy supply sector - Energy Conservation Act-2001 and its features - electricity tariff - Thermal Basics - need and types of energy audit - Energy management/audit approach- understanding energy costs.

**UNIT II MATERIAL AND ENERGY BALANCE 9**

Methods for preparing process flow - material and energy balance diagrams - Energy policy purpose - location of energy management - roles and responsibilities of energy manager – employees training and planning - financial analysis techniques

**UNIT III ENERGY EFFICIENCY IN THERMAL UTILITIES 9**

Introduction to fuels - properties of fuel oil, coal and gas - principles of combustion - combustion of oil, coal and gas - Boilers: Types, combustion in boilers, performances evaluation, analysis of losses - Steam System: Properties of steam, assessment of steam distribution losses, steam trapping, condensate and flash steam recovery system – furnaces - temperature control, draft control, waste heat recovery – refractory – cogeneration – case study.

**UNIT IV ENERGY EFFICIENCY IN COMPRESSED AIR SYSTEM 9**

Compressed Air System: Types of air compressors - compressed air system components - savings opportunities - Refrigeration System: Vapour compression refrigeration cycle – refrigerants - factors affecting refrigeration and air conditioning system - Vapour absorption refrigeration system: working principle - types - cooling tower - flow control strategies and energy saving - Diesel Generating system: Factors affecting selection - energy performance assessment of diesel conservation avenues – case study

**UNIT V ENERGY EFFICIENCY IN ELECTRICAL UTILITIES 9**

Electrical load management and maximum demand control - power factor improvement and its benefit - selection and location of capacitors - performance assessment of PF capacitors - automatic power factor controllers - transformer losses - losses in induction motors - factors affecting motor performance - rewinding and motor replacement issues - soft starters with energy saver - variable speed drives – Fans and blowers: Types - efficient system operation - flow control strategies -Pumps and Pumping System: system operation - flow control methods - Lighting System: Light source, choice of lighting, luminance requirements – ballast - occupancy sensors - energy efficient lighting controls – case study.

**TOTAL : 45 PERIODS**

## COURSE OUTCOMES:

**After completion the above subject, students will be able to understand**

CO1: Students will develop the ability to learn about the need for energy management and auditing process.

CO2: Learners will learn about basic concepts of materials and energy balance.

CO3: Students will understand the energy management in thermal utilities.

CO4: Students will have knowledge on the concepts of compressed air system and its efficiency improvement.

CO5: Students will be able to learn about the concept of lighting systems, light sources and various forms of cogeneration.

FUNDAMENTALS OF OBJECT ORIENTED PROGRAMMING

LT P C

3 0 0 3

## OBJECTIVES:

- To get familiar with the concepts of Object Oriented Programming.
- To have a thorough understanding about Classes and Objects.
- To introduce the concepts related to Object Oriented Programming.
- To have few case studies related to the concepts of Object Oriented Programming

## UNIT I INTRODUCTION

9

Procedure-Oriented Programming System - Object-Oriented Programming System - Comparison of C++with C - Object-Oriented Terms and Concepts - Object-Oriented Languages - Differences between Procedural and Object-Oriented Programming - Merits and Demerits of Object-Oriented

Methodology. Structure of a C++ Program-Data Types - Operators in C++ - Control Structures - Functions in C++.

**UNIT II CLASSES AND OBJECTS 9**

Introduction to Classes and objects - Member Functions and Member Data - Objects and Functions - Objects and Arrays - Name Spaces - Nested Classes - Dynamic Memory Allocation and Deallocation - Constructors and Destructors.

**UNIT III INHERITANCE AND POLYMORPHISM 9**

Introduction - Base Class and Derived Class Pointers - Function Overriding - Base Class Initialization - Protected Access Specifier - Deriving by Different Accessing specifiers - Different Kinds of Inheritance - Order of Invocation of Constructors and Destructors - Virtual Functions - Mechanism of Virtual Functions - Pure Virtual Functions - Virtual Destructors and Constructors.

**UNIT IV OPERATOR OVERLOADING AND TEMPLATES 9**

Operator Overloading - Overloading of various Operators - Type Conversion - New Style Casts and the typed Operator - Function Templates - Class Templates - The Standard Template Library (STL).

**UNIT V EXCEPTION HANDLING AND CASE STUDIES 9**

Introduction - C-Style Handling of Error-generating Code - C++-Style Solution - the try/ throw/ catch Construct - Limitations of Exception Handling. Case Studies: String Manipulations - Building classes for matrix operations

**TOTAL: 45 PERIODS**

**COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

CO1: Develop simple programs using C++

CO2: Develop simple programs in C++ for object oriented concepts

CO3: Develop programs using inheritance and polymorphism

CO4: Overload operators and functions

CO5: Confidence to develop programs for complex problems with error handling

**OBJECTIVES:**

- To introduce the concept of analyzing discrete time signals & systems in the time and frequency domain through mathematical representation.
- To study various time to frequency domain transformation techniques
- Understand the computation algorithmic steps for Fourier Transform
- To study about filters and their design for digital implementation.
- To introduce the programmable digital signal processor & its application.

**UNIT I INTRODUCTION****9**

Classification of systems: Continuous, discrete, linear, causal, stable, dynamic, recursive, time variance; classification of signals: continuous and discrete, energy and power; mathematical representation of signals; spectral density; sampling techniques, quantization, quantization error, Nyquist rate, aliasing effect. Digital signal representation

**UNIT II DISCRETE TIME SYSTEM ANALYSIS****9**

Z-transform and its properties, inverse z-transforms; difference equation - Solution by z-transform, application to discrete systems - Stability analysis, frequency response - Convolution - Introduction to Fourier Transform- Discrete time Fourier transform.

**UNIT III DISCRETE FOURIER TRANSFORM & COMPUTATION****9**

DFT properties, magnitude and phase representation - Computation of DFT using FFT algorithm – DIT & DIF - FFT using radix 2 – Butterfly structure.

**UNIT IV DESIGN OF DIGITAL FILTERS****9**

FIR & IIR filter realization – Parallel & cascade forms. FIR design: Windowing Techniques – Need and choice of windows – Linear phase characteristics. IIR design: Analog filter design - Butterworth and Chebyshev approximations; digital design using impulse invariant and bilinear transformation - Warping, prewarping -Frequency transformation.

**UNIT V DIGITAL SIGNAL PROCESSORS****9**

Introduction - Architecture of one DSP processor for motorcontrol - Features - Addressing Formats – Functional modes - Introduction to Commercial Processors

**TOTAL: 45 PERIODS****COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

CO1: Ability to understand Signals and systems by their mathematical representation.

CO2: Ability to do system representation using transforms

CO3: Learn the transformation techniques for time to frequency conversion.

CO4: Ability to understand the types of filters and their design for digital implementation.

CO5: Capacity to involve digital signal processor for application development.

## EE5009                      POWER ELECTRONICS FOR RENEWABLE ENERGY SYSTEMS                      L T P C 3 0 0 3

- To study the principle of generation of different renewable energy sources.
- To model the electrical machines used for renewable energy conversion systems.
- To analyse the power converters used for renewable energy systems.
- To analyse the operation of standalone and grid integrated renewable energy systems.
- To study the hybrid operation of wind and PV systems and features of MPPT tracking.

### UNIT I                      INTRODUCTION                      9

Environmental aspects of electric energy conversion: impacts of renewable energy generation on environment (cost-GHG Emission) -Qualitative study of different renewable energy resources: Geothermal, ocean and Biomass.

Solar PV Systems - Equivalent Circuit model, Performance Characteristics, Charge Controllers, Types of Solar PV Systems and Applications.

Wind Energy System- Important terms-TSR, Cp, SRC, Performance Characteristics of Wind turbine- Control System and strategy, Safe operating area.

### UNIT II                      ELECTRICAL MACHINES FOR RENEWABLE ENERGY CONVERSION                      9

Reference theory fundamentals-principle of operation and analysis: IG, PMSG, SCIG and DFIG.

### UNIT III                      POWER CONVERTERS                      9

Solar: Principle of operation: line commutated converters (inversion-mode) - Boost and buck-boost converters- selection of inverter, battery sizing, array sizing

Wind: Three phase AC voltage controllers- AC-DC-AC converters: uncontrolled rectifiers, PWM Inverters, Grid Interactive Inverters-matrix converters.

**UNIT IV ANALYSIS OF WIND AND PV SYSTEMS****9**

Standalone operation of fixed and variable speed wind energy conversion systems - Grid integrated PMSG, SCIG Based WECS, Standalone and grid Integrated solar system- Grid connection Issues.

**UNIT V HYBRID RENEWABLE ENERGY SYSTEMS****9**

Need for Hybrid Systems- Range and type of Hybrid systems- Case studies of Wind-PV Maximum Power Point Tracking (MPPT).

**TOTAL : 45 PERIODS****COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

CO1: Features of different renewable energy sources are studied.

CO2: Features of electrical machines used in renewable energy conversion are studied.

CO3: Various topologies of power converters used for interfacing renewable energy system are studied.

CO4: Wind and PV systems are analysed and its hybrid operation is successfully studied.

CO5: Different MPPT algorithms are studied.

**EE5010****SPECIAL ELECTRICAL MACHINES****LT P C  
3 0 0 3****OBJECTIVES:**

- To introduce the concepts of permanent magnets and to study the construction, operation, characteristics & control of PMLDC motor.
- To study construction, operation characteristics and control of PMSM.
- To understand the construction, operation, characteristics, power controllers and control of SRM.
- To study the operation of stepper motor, its types, control and its applications.
- To understand the operation & characteristics of other special machines.

*Attested*

**UNIT I PERMANENT MAGNET BRUSHLESS DC MOTORS 9**

Fundamentals of Permanent Magnets- Types- Principle of operation- Magnetic circuit analysis- EMF and Torque equations- Characteristics and control

**UNIT II PERMANENT MAGNET SYNCHRONOUS MOTORS 9**

Principle of operation – EMF and torque equations - Phasor diagram - Power controllers- performance characteristics - Digital controllers - Constructional features, operating principle and characteristics of synchronous reluctance motor.

**UNIT III SWITCHED RELUCTANCE MOTORS 9**

Constructional features -Principle of operation- Torque prediction -performance Characteristics- Power controllers - Control of SRM drive- Sensor less operation of SRM - Applications.

**UNIT IV STEPPER MOTORS 9**

Constructional features -Principle of operation -Types - Torque equation - Linear and Non-linear analysis - Characteristics - Drive circuits - Closed loop control - Applications.

**UNITV OTHER SPECIAL ELECTRICAL MACHINES 9**

Principle of operation and characteristics of Hysteresis motor - AC series motors - Linear induction motor – Applications.

**TOTAL: 45 PERIODS**

**COURSE OUTCOMES:**

**After completion the above subject, students will be able to understand**

CO1: Analyze given magnetic circuit and understand operation, characteristics and control of PMSM motor

CO2: Understand the construction, operation performance characteristics of PMSM and its power controllers.

CO3: Understand the construction, operation and control of SRM drive and its power controllers

CO4: Understand the construction, operation, characteristics and control of stepper motor

CO5: Understand the operation & characteristics of other special electrical machines.

EE5011

FLEXIBLE AC TRANSMISSION SYSTEMS

LT P C

3 0 0 3

## OBJECTIVES:

### To understand:

- The problems in AC transmission systems and establish the Flexible AC transmission systems
- The operation and control of SVC and its applications to enhance the stability and damping.
- The different modes of operation TCSC and to model it for power flow and stability studies.
- The basic operation and control of voltage source converter based FACTS controllers.
- The interaction between the FACTS controllers

### UNIT I INTRODUCTION

9

Reactive power control in electrical power transmission lines-loads & system compensation, Uncompensated transmission line-shunt and series compensation. Basic concepts of Static Var Compensator (SVC)-Thyristor Controlled Series Capacitor (TCSC) -Unified Power Flow Controller (UPFC)

### UNIT II STATIC VAR COMPENSATOR (SVC) AND APPLICATIONS

9

Voltage control by SVC-Advantages of slope in dynamic characteristics-Influence of SVC on system voltage-Design of SVC voltage regulator-Modelling of SVC for power flow and fast transient stability-Applications: Enhancement of transient stability – Steady state power transfer -Enhancement of power system damping.

### UNIT III THYRISTOR CONTROLLED SERIES CAPACITOR (TCSC) AND APPLICATIONS

9

Operation of the TCSC-Different modes of operation-Modelling of TCSC, Variable reactance model-Modelling for Power Flow and stability studies. Applications: Improvement of the system stability limit-Enhancement of system damping.

### UNIT IV VOLTAGE SOURCE CONVERTER BASED FACTS CONTROLLERS

9

Static Synchronous Compensator (STATCOM)-Principle of operation-V-I Characteristics. Applications: Steady state power transfer-enhancement of transient stability-prevention of voltage instability. SSSC-operation of SSSC and the control of power flow-modelling of SSSC in load flow and transient stability studies.

Attested

**UNIT V CO-ORDINATION OF FACTS CONTROLLERS****9**

Controller interactions-SVC-SVC interaction-Co-ordination of multiple controllers using linear control techniques -Control co-ordination using genetic algorithms.

**TOTAL: 45 PERIODS****COURSE OUTCOMES**

**After completion the above subject, students will be able to understand**

- CO1: Analyze the problems in AC transmission systems and understand the need for Flexible AC transmission systems  
 CO2: Analyze the operation and control of SVC and its applications to enhance the stability and damping.  
 CO3: Analyze the different modes of operation TCSC and to model it for power flow and stability studies.  
 CO4: Analyze basic operation and control of voltage source converter based FACTS controllers.  
 CO5: Analyze the interaction between the FACTS controllers

*Attested*

- To impart knowledge on structure of power system and standard voltage levels
- To compute transmission line parameters
- To know about HVDC system
- To locate various FACTS devices on power system
- To study the effect of fields on living and non-living organisms

**UNIT I TRANSMISSION LINE TRENDS 9**

Standard transmission voltages, average values of line parameters – Power handling capacity and line losses - number of lines, Advantages and disadvantages of HVAC and HVDC system.

**UNIT II LINE AND GROUND PARAMETERS 9**

Resistance, Temperature rise and current carrying capacity of conductors. Properties of Bundle conductors - Calculation of L and C parameters - Modes of propagation - Effect of Earth.

**UNIT III HVDC SYSTEM 9**

HVDC Power transmission-Description, principles of operation and Planning for HVDC transmission-DC breakers-Operating problems- HVDC transmission based on VSC -Types and applications of MTDC systems.

**UNIT IV FACTS 9**

Basic concepts – Reactive power control, uncompensated transmission line, series compensation, SVC, thyristor control, series capacitor, static synchronous compensator, unified power flow controller and applications.

**UNIT V ELECTROSTATIC AND MAGNETIC FIELDS OF EHV LINES 9**

Electric shock - threshold currents - Calculation of electrostatic fields and magnetic fields of AC and DC lines - Effect of fields on living organism - Electrical field measurement.

**TOTAL : 45 PERIODS****COURSE OUTCOMES**

**After completion the above subject, students will be able to understand**

CO1: Ability to identify transmission (HVAC and HVDC) and distribution voltage levels

CO2: Ability to extract transmission line parameters

CO3: Ability to locate required HVDC transmission in power system

CO4: Ability to know the uses of placing FACTS devices

CO5: Able to compute electrostatic and magnetic fields of EHV lines

**EE5013****HIGH VOLTAGE DIRECT CURRENT TRANSMISSION****L T P C  
3 0 0 3****OBJECTIVES:**

- To understand the evolution of HVDC Transmission and its applications
- To analyze the operation of HVDC converters
- To understand operation and control of HVDC link
- To investigate the generation of harmonics, reactive power requirement and design suitable filters and FACTS controllers.
- To model AC/DC system and perform load flow analysis of the AC/DC system including the HVDC link.

**UNIT I INTRODUCTION****9**

DC Power transmission technology-Comparison of AC and DC transmission-Application of DC transmission-Description of HVDC transmission system-Planning for HVDC transmission-Modern trends in HVDC technology-DC breakers-Operating problems- HVDC transmission based on VSC – Types and applications of MTDC systems.

**UNIT II ANALYSIS OF HVDC CONVERTERS****9**

Line commutated converter -Analysis of Graetz circuit with and without overlap -Pulse number-Choice of converter configuration - Converter bridge characteristics-Analysis of a 12 pulse converters- Analysis of VSC topologies and firing schemes.

**UNIT III CONVERTER AND HVDC SYSTEM CONTROL****9**

Principles of DC link control-Converter control characteristics-System control hierarchy- Firing angle control- Current and extinction angle control-Starting and stopping of DC link -Power control -Higher level controllers -Control of VSC based HVDC link.

**UNIT IV REACTIVE POWER AND HARMONICS CONTROL****9**

Reactive power requirements in steady state-Sources of reactive power-SVC and STATCOM-Generation of harmonics -Design of AC and DC filters- Active filters.

**UNIT V POWER FLOW ANALYSIS IN AC/DC SYSTEMS****9**

Per unit system for DC quantities-DC system model -Inclusion of constraints -Power flow analysis - case study

**TOTAL: 45 PERIODS**

## COURSE OUTCOMES

After completion the above subject, students will be able to understand

CO1: understand the need for HVDC transmission and its evolution

CO2: analyze the operation of the converters

CO3: to understand the different modes of operation HVDC link and mode shaping

CO4: design filters to eliminate AC/DC harmonics and provide support to reactive power support by means of FACTS.

CO5: Perform AC/DC load flow by including HVDC link.

FUNDAMENTALS OF COMPUTER ARCHITECTURE

LT P C  
3 0 0 3

### OBJECTIVES:

- To discuss the number system basics and computer arithmetic.
- To study the concepts related to memory organization
- To learn digital logic, combinational and sequential circuits.
- To explain different types of addressing modes and memory organization.
- To familiarize with parallelism and pipelining

### UNIT I COMPUTER ARITHMETIC AND LOGIC

9

Number Systems: Decimal system - Positional number systems - Binary system - Converting between binary and decimal - Hexadecimal notations. Computer Arithmetic: ALU - Integer representation - Integer arithmetic - Floating-point representation - Floating-point arithmetic. Digital Logic: Boolean algebra - Gates - Combinational circuits - Sequential circuits.

### UNIT II MEMORIES

9

Memory and storage - Physical memory and physical addressing - Caches and caching - Virtual memory technologies and virtual addressing

Attested

**UNIT III INPUT AND OUTPUT 9**  
 Input / Output Concepts And Terminology - Buses And Bus Architectures - Programmed And Interrupt-Driven I/O - A Programmer's View Of Devices, I/O, And Buffering.

**UNIT IV CENTRAL PROCESSING UNIT 9**  
 Instruction sets: Machine instruction characteristics - Types of operands - Intel x86 and ARM data types - Types of operations - Intel x86 and ARM operation types - Addressing modes - x86 and ARM addressing modes - Instruction formats - x86 and ARM instruction formats. Processor structure and function: Processor organization - Register organization - Instruction cycle.

**UNIT V PARALLELISM AND DATA PIPELINING 9**  
 Parallelism: Introduction - Parallel and Pipelined Architectures - Characterizations Of Parallelism – Types of parallelism and parallel architectures (Flynn classification) - Communication, Coordination, And Contention - Performance Of Multiprocessors - Consequences For Programmers - Redundant Parallel Architectures - Distributed And Cluster Computers. Data Pipelining: The concept of pipelining - Software pipelining - Software pipelining and Hardware pipelining.

**TOTAL: 45 PERIODS**

**COURSE OUTCOMES**

**After completion the above subject, students will be able to understand**

- CO1 : Apply different formats of data representation and number systems
- CO2 : Design and evaluate combinational and sequential logic circuits with multiple inputs and outputs
- CO3 : Explain the architecture and functionality of central processing unit
- CO4 : Exemplify in a better way the I/O and memory organization
- CO5 : Exemplify in a better way parallelism and data pipelining.

*Attested*

**OBJECTIVES:**

- To achieve an understanding of fundamental data structures and algorithms and the tradeoffs between different implementations of these abstractions
- To explain theoretical analysis, implementation, and application.
- To understand the concepts related to non-linear data structures like trees and graphs
- To learn the basics of Array processing, Sorting and Searching
- To design new algorithms or modify existing ones for new applications

<b>UNIT I</b>	<b>INTRUDUCTION AND BASIC DATA STRUCTURES</b>	<b>9</b>
Problem Solving Techniques with Examples- Introduction to Abstract Data Types (ADT) - Elementary Data Structures: Stacks and queues and their implementation - Linked lists - Implementing pointers and objects.		
<b>UNIT II</b>	<b>ADVANCED DATA STRUCTURES</b>	<b>9</b>
Trees: Preliminaries - Binary Tree - Tree traversals - Binary search Trees - AVL Trees.		
<b>UNIT III</b>	<b>SORTING AND HASING</b>	<b>9</b>
Sorting: Sorting by Selection - Sorting by Insertion - Sorting by Exchange - Sorting by Diminishing Increment - Heap Sort - Quick Sort. Hashing: Direct-address tables - Hash tables - Hash functions - Open addressing - Perfect hashing.		
<b>UNIT IV</b>	<b>ALGORITHM DESIGN TECHNIQUES</b>	<b>9</b>
The Role of Algorithms in Computing - Getting Started - Growth of Functions: Asymptotic notation - Standard notations and common functions. Divide-and-Conquer with an example - Greedy Algorithms: An activity-selection problem - Elements of the greedy strategy - Huffman codes. Backtracking with an example.		
<b>UNIT V</b>	<b>GRAPH ALGORITHMS</b>	<b>9</b>
Elementary Graph Algorithms: Representation of Graphs - Breadth-first Search - Depth-first Search. Minimum Spanning Trees: The algorithms of Kruskal and Prim. Single-source shortest paths: The Bellman-Ford algorithm - Dijkstra's algorithm. All pairs shortest paths: The Floyd-Warshall algorithm.		
		<b>TOTAL: 45 PERIODS</b>

**COURSE OUTCOMES**

**After completion the above subject, students will be able to understand**

- CO1: A comprehensive understanding of fundamentals data structures  
 CO2: Implement and compare the fundamental data structures  
 CO3: Develop programs on their own for advanced data structures  
 CO4: Correlate the use of data structures in real life situations  
 CO5: Confidence to develop programs for complex problems with improved performance

ROBOTICS AND AUTOMATION

L T P C  
3 0 0 3

### OBJECTIVES:

- To introduce basic robotic terminologies
- To illustrate various parts of robots
- To introduce manipulator dynamics and gripper types.
- To illustrate kinematics and path planning.
- To introduce dynamics and control operation.

### UNIT I BASIC CONCEPTS

9

Definition and origin of robotics - different types of robotics - various generations of robots - degrees of freedom - Robot classifications and specifications- Asimov's laws of robotics - dynamic stabilization of robots.

### UNIT II . POWER SOURCES, SENSORS AND ACTUATORS

9

Hydraulic, pneumatic and electric drives: Design and control issues - determination of HP of motor and gearing ratio - variable speed arrangements - path determination - micro machines in robotics - machine vision - ranging - laser - acoustic - magnetic, fiber optic and tactile sensors.

### UNIT III MANIPULATORS AND GRIPPERS DIFFERENTIAL MOTION

9

Construction of manipulators - manipulator dynamics and force control - electronic and pneumatic manipulator control circuits - end effectors - U various types of grippers - design considerations.

**UNIT IV KINEMATICS AND PATH PLANNING****9**

Linear and angular velocities-Manipulator Jacobian-Prismatic and rotary joints-Inverse -Wrist and arm singularity - Static analysis - Force and moment Balance Solution kinematics problem – robot programming languages

**UNIT V DYNAMICS AND CONTROL AND APPLICATIONS****9**

Lagrangian mechanics-2DOF Manipulator-Lagrange Euler formulation-Dynamic model -Manipulator control problem-Linear control schemes-PID control scheme-Force control of robotic manipulator. Multiple robots - machine interface - robots in manufacturing and non- manufacturing applications - robot cell design – selection of robot.

**TOTAL: 45 PERIODS****COURSE OUTCOMES**

**After completion the above subject, students will be able to understand**

- CO1: Understand the evolution of robot technology and mathematically represent different types of robot.  
 CO2: Get exposed to the case studies and design of robot machine interface.  
 CO3: Understand manipulator and gripper operation  
 CO4: Develop kinematic and path planning equations for standard configurations  
 CO5: Familiarize various control schemes of Robotics control

*Attested*

**OBJECTIVES:**

- To understand the basics of electromechanical energy conversion.
- To design an electrical machine.
- To impart knowledge on problem formulation for field computation.
- To analyse the performance parameters for rotating machines.
- To analyse the performance parameters for linear machines.

**UNIT I INTRODUCTION****9**

Review on electromagnetic theory – Basic field equations, calculation of field distribution, inductance, capacitance, force and torque, energy, Laplace/poisson equations, electromechanical energy conversion for linear and rotating actuators, Difference in torque equations for cylindrical and salient pole machines.

**UNIT II REVIEW ON CONVENTIONAL ELECTRICAL MACHINE DESIGN****9**

Introduction to Electrical design methods, Design Specifications, Output Equations of AC & DC Machines; Importance of specific loadings; Electrical and Magnetic Materials, Types, Linear and Non-linear Material, Standards of Electrical machines design, Heat dissipation and Cooling methods, Ventilation schemes in static (Transformers) and rotating machines; Types of enclosures; Step by Step General design procedure to reach optimal design, Limitations of conventional methods, Need for computer aided design, Advantages.

**UNIT III FINITE ELEMENT ANALYSIS****9**

Introduction to FEM, Boundary value Problems, Boundary Conditions, formulation for 2-D planar and axial symmetry problems- governing equations, discretization, element shape functions, global matrices/vectors, solution, post processing.

**UNIT IV FE ANALYSIS OF ROTATING ACTUATORS (MACHINES) (PRACTICAL)****9**

Modelling and Analysis of DC machines, Induction Machines, Synchronous Machines and Reluctance machines. Types of Analysis-Static, Time harmonic and transient with motion conditions, Prediction of performance parameters.

**UNIT V FE ANALYSIS OF LINEAR ACTUATORS (PRACTICAL)****9**

Modelling and Analysis of Solenoid Actuators, Linear Induction Motor, Linear PMSM, Linear SRM and Transformers. Types of Analysis-Static, Time harmonic and transient with motion conditions, Prediction of performance parameters.

**TOTAL : 45 PERIODS****COURSE OUTCOMES**

**After completion the above subject, students will be able to understand**

- CO1: Understand the basics of electromechanical energy conversion.  
 CO2: Design an conventional electrical machine using finite element package.  
 CO3: Define boundary conditions and formulate the equations for FEA.  
 CO4: Enhance the performance parameters using FEA of rotating machines.  
 CO5: Enhance the performance parameters using FEA of linear machines.

**EE5018****SMART GRID****LTPC  
3003****OBJECTIVES:**

- To understand the evolution of Smart and Interconnected energy systems.
- To understand the various challenges and benefits of smart grid and the national and international initiatives taken
- To understand the concepts related with transmission and distribution in smart grid technologies.
- To get an insight of the various smart measurement technologies.
- To understand the various computing technologies for Smart Operation of the Grid.

**UNIT I INTRODUCTION****9**

Evolution of Energy Systems, Concept, Definitions and Need, Difference between Conventional & Smart Grid, Drivers, structures, functions, opportunities, challenges and benefits of Smart Grid, Basics of Microgrid, National and International Initiatives in Smart Grid.

**UNIT II SMART METERING****9**

Introduction to Advanced Metering infrastructure (AMI) - drivers and benefits, AMI protocols, standards and initiatives, AMI needs in the smart grid, Real time management and control, Phasor Measurement Unit (PMU).

**UNIT III SMART GRID TECHNOLOGIES (Transmission)****9**

Technology Drivers, Smart energy resources, Smart substations, Substation Automation, Feeder Automation, Transmission systems: EMS, Wide area Monitoring, Protection and control.

*Attested*

**UNIT IV SMART GRID TECHNOLOGIES (Distribution)****9**

DMS, Volt/VAR control, Fault Detection, Isolation and service restoration, Outage management, High-Efficiency Distribution Transformers, Phase Shifting Transformers, Electric Vehicles.

**UNIT V HIGH PERFORMANCE COMPUTING FOR SMART GRID APPLICATIONS****9**

Local Area Network (LAN), House Area Network (HAN), Wide Area Network (WAN), Broadband over Power line (BPL), IP based Protocols, Computing technologies for Smart Grid applications (Web Service to CLOUD Computing), Role of big data and IoT, Cyber Security for Smart Grid.

**TOTAL : 45 PERIODS****COURSE OUTCOMES**

**After completion the above subject, students will be able to understand**

CO1: To be able to understand the importance and objectives of Power System Grid.

CO2: To be able to know and understand the concept of a smart grid;

CO3: To identify and discuss smart metering devices and associated technologies.

CO4: To be able to get an overview of Microgrid and Electric Vehicle Technology.

CO5: To be able to have an up to date knowledge on the various computing technologies; to understand the role of Big Data and IoT for effective and efficient operation of Smart Grid.

**OBJECTIVES:**

- To introduce the restructuring of power industry and market models
- To impart knowledge on fundamental concepts of congestion management
- To analyze the concepts of locational marginal pricing and financial transmission rights
- To gain insight on the ancillary service management and pricing of transmission network
- To Illustrate about the electricity act and various power reforms in India

**UNIT I INTRODUCTION TO RESTRUCTURING OF POWER INDUSTRY 9**

Introduction: Deregulation of power industry, Restructuring process, Issues involved in deregulation, Deregulation of various power systems-Fundamentals of Economics: Consumer 96 behavior, Supplier behavior, Market equilibrium, Short and long run costs, Various costs of production- Market models: Market models based on Contractual arrangements, Comparison of various market models, Electricity vis-a-vis other commodities, Market architecture, Case study.

**UNIT II TRANSMISSION CONGESTION MANAGEMENT 9**

Introduction: Definition of Congestion, reasons for transfer capability limitation, Importance of congestion management, Features of congestion management-Classification of congestion management methods-Calculation of ATC-Non market methods- Market methods-Nodal pricing- Inter zonal and Intra zonal congestion management-Price area congestion management- Capacity alleviation method.

**UNIT III LOCATIONAL MARGINAL PRICES AND FINANCIAL TRANSMISSION RIGHT 9**

Mathematical preliminaries:-Locational marginal pricing Lossless DCOPF model for LMP calculation Loss compensated DCOPF model for LMP calculation ACOPF model for LMP calculation-Financial Transmission rights-Risk hedging functionality Simultaneous feasibility test and revenue adequacy-FTR issuance process: FTR auction, FTR allocation- Treatment of revenue shortfall-Secondary trading of FTRs-Flow gate rights-FTR and market power FTR and merchant transmission investment.

**UNIT IV ANCILLARY SERVICE MANAGEMENT AND PRICING OF TRANSMISSION NETWORK 9**

Introduction of ancillary services – Types of Ancillary services Classification of Ancillary services-Load generation balancing related services Voltage control and reactive power support devices-Black start capability service-How to obtain ancillary service -Co-optimization of energy and reserve services- International comparison Transmission pricing -Principles- Classification- Rolled in transmission pricing methods-Marginal transmission pricing paradigm-Composite pricing paradigm-Merits and demerits of different paradigm.

**UNIT V REFORMS IN INDIAN POWER SECTOR 9**

Introduction-Frame work of Indian power sector-Reform initiatives-Availability based tariff Electricity act 2003-Open access issues-Power exchange-Reforms in the near future

**TOTAL: 45 PERIODS****COURSE OUTCOMES**

**After completion the above subject, students will be able to understand**

CO1: To be able to gain knowledge on the fundamentals of deregulation of power systems

CO2: To understand the basics and classification of transmission congestion management

CO3: To learn about the fundamental concepts involved in locational margin prices and financial transmission rights

*Attested*

CO4: To understand the significance of ancillary services and pricing of transmission network

CO5: To gain knowledge about the various reforms in the power sectors of India

**INDUSTRIAL POWER SYSTEM ANALYSIS AND DESIGN**

**LT P C  
3 0 0 3**

### OBJECTIVES:

- To impart knowledge on Motor Starting Studies.
- To understand the need for power factor correction and analyse the various methods that are used in the Power Factor Correction studies.
- To learn about the sources of harmonics, evaluate the harmonics present in the power system and mitigate them by filters.
- To analyse the sources that can cause the voltage flicker and find solutions to minimize the flicker.
- To impart knowledge on the ground grid analysis.

### UNIT I MOTOR STARTING STUDIES

**9**

Introduction-Evaluation Criteria-Starting Methods-System Data-Voltage Drop Calculations Calculation of Acceleration time-Motor Starting with Limited Capacity Generators-Computer-Aided Analysis.

### UNIT II POWER FACTOR CORRECTION STUDIES

**9**

Introduction-System Description and Modelling-Acceptance Criteria-Frequency Scan Analysis Voltage Magnification Analysis-Sustained Over voltages-Switching Surge Analysis-Back-to-Back Switching.

### UNIT III HARMONIC ANALYSIS

**9**

Harmonic Sources-System Response to Harmonics-System Model for Computer-Aided Analysis Acceptance Criteria-Harmonic Filters-Harmonic Evaluation-Case Study.

*Attested*

### UNIT IV FLICKER ANALYSIS

**9**

Sources of Flicker-Flicker Analysis-Flicker Criteria-Data for Flicker analysis- Case Study-Arc Furnace Load-Minimizing the Flicker Effects.

**UNIT V GROUND GRID ANALYSIS**

**9**

Introduction-Acceptance Criteria-Ground Grid Calculations-Computer-Aided Analysis - Improving the Performance of the Grounding Grids-Conclusions.

**TOTAL: 45 PERIODS**

**COURSE OUTCOMES**

**After completion the above subject, students will be able to understand**

CO1: perform motor starting studies.

CO2: To model and carry out power factor correction studies.

CO3: Perform harmonic analysis and reduce the harmonics by using filters.

CO4: Carry out the flicker analysis by proper modeling of the load and its minimization.

CO5: Design the appropriate ground grid for electrical safety.

**VLSI DESIGN AND ARCHITECTURE**

**LT P C  
3 0 0 3**

**OBJECTIVES:**

- To understand the basic concepts of VLSI and CMOS design.
- To introduce the basics of VLSI design and its importance.
- To study the combinational and sequential CMOS circuit design.
- To introduce the IC fabrication methods
- To learn about the programming of Programmable device using Hardware description Language.

**UNIT I MOS TRANSISTOR & CMOS:**

*Attested* **9**

Introduction to logic design- switching devices- MOS transistor current equation-characteristics-

Scaling- MOS Transistor Model- NMOS & CMOS inverter -characteristics Determination of pull up / pull down ratios, Nano MOSFET.

**UNIT II CMOS CIRCUIT DESIGN: 9**

CMOS based combinational logic design- Dynamic CMOS & clocking -Transmission Gates- BiCMOS- CMOS memory circuits.

**UNIT III IC FABRICATION : 9**

Fabrication Technologies (NMOS, PMOS, CMOS, BiCMOS)- Stick Diagrams, Design Rules and Layout - recent trends in IC fabrication.

**UNIT IV PROGRAMMABLE LOGIC DEVICES: 9**

PLA, PAL, GAL, CPLD, FPGA and FPAA-- Implementation of Finite State Machine with PLDs.

**UNIT V VHDL PROGRAMMING: 9**

RTL Design – Structural level Design -combinational logic – Types – Operators – Packages- Sequential circuit - Sub programs - Test benches. (Examples: adder, counters, flips flops, FSM, Multiplexers / Demultiplexers).

**TOTAL : 45 PERIODS**

**COURSE OUTCOMES**

**After completion the above subject, students will be able to understand**

CO1: Understanding the role of MOSFET for computation.

CO2: The learning process delivers insight into developing CMOS design techniques

CO3: Insight into IC fabrication methods.

CO4: Improved skill set in programmable logic devices usage for applications.

CO5: Understating and usage of HDL computational processes with improved design strategies.

**OBJECTIVES:**

- To Learn and understand the concepts of operating system and services.
- To demystify the core structure, functions and design principles of operating system.
- To familiarize with the issues involved in the design and implementation of modern operating systems
- To introduce the implementation of these concepts in Linux and Windows

**UNIT I OPERATING SYSTEM OVERVIEW AND PROCESSES 9**

Introduction: Computer system organization and architecture - Resource management - Security and protection - Computing environments - Free and open source operating systems. Operating system services - User and OS interface - System calls and Services - OS Structure. Processes: Process concept and scheduling - Operations on Processes - Interprocess communication - Multithreading models.

**UNIT II PROCESS MANAGEMENT AND SYNCHRONIZATION 9**

CPU Scheduling: Basic concepts - Scheduling criteria - Scheduling algorithms - Multi-Processor Scheduling - Algorithm evaluation. Synchronization tools: Background - Critical-section problem - Semaphores and Monitors. Classic problems of Synchronization. Deadlocks: System model - Deadlock characterization - Methods for handling deadlocks - Deadlock prevention - Deadlock avoidance - Deadlock Detection - Recovery from Deadlock.

**UNIT III MEMORY AND STORAGE MANAGEMENT 9**

Memory management: Background - Contiguous memory allocation - Paging - Structure of the page table - Swapping. Virtual memory: Background - Demand paging - Copy on write - Page replacement - Allocation of frames. Storage Management: Overview of mass-storage structure - HDD scheduling - NVM scheduling - Error detection and correction - Storage device management - Swap-space management - Storage attachment - RAID structure.

**UNIT IV FILE SYSTEM, SECURITY AND PROTECTION 9**

File system: File concepts - Access methods - Directory structure - Protection. File system implementation: File-system structure and operations - Directory implementation - Allocation methods - Free-space management. Security: The security problem - Program threats - System and network threats - Cryptography as a security tool - User authentication. Protection: Goals and principles of protection - Access matrix.

**UNIT V CASE STUDIES 9**

Linux: Linux history - Design principles - Kernel modules - File-system - Input and output - Network structure. Windows 10: History - Design principles - File system - Networking.

**TOTAL : 45 PERIODS***Attested*

## COURSE OUTCOMES

After completion the above subject, students will be able to understand

CO1: A thorough understanding of OS concepts and its services

CO2: Clear idea about the process, memory and storage management

CO3: Various file system concepts and their implementation

CO4: A complete knowledge of file system security and protection

CO5: How these concepts are implemented in Windows and Linux

EMBEDDED SYSTEM AUTOMATION

LT P C  
3 0 0 3

### OBJECTIVES:

- To introduce the Significance and the role of embedded system for automation.
- To understand the embedded system role in IOT and use it for application development.
- To observe the need for smart cities and systems
- To introduce the automotive embedded systems
- To observe the evolving trend in communication based automotive systems.

### UNIT I EMBEDDED SYSTEMS DESIGN

9

Overview of Embedded system - Design process in embedded system- Communication Protocols- Embedded SOC- RTOS- Embedded product Development Life Cycle.

### UNIT II EMBEDDED SYSTEM FOR IOT

9

Overview of IOT- Sensing- Actuation- IOT Networking- Communication protocols-data handling and analytics- cloud computing- Implementation of IOT with Raspberry pi- Industrial IOT.

*Attested*

**UNIT III EMBEDDED SYSTEMS AND IOT APPLICATIONS** 9  
 Embedded system for Smart Meter- smart Grid -Smart cities and smart homes, Agriculture and Healthcare, Energy auditing.

**UNIT IV EMBEDDED SYSTEM FOR AUTOMOTIVE SYSTEM** 9  
 Electronic control Unit - Vehicle Management Systems- Sensors-Actuators-Vehicle Communication protocols -Infotronics- Introduction to AUTO SAR.

**UNIT V ADVANCES IN AUTOMOTIVE ELECTRONIC SYSTEMS** 9  
 Introduction to electric and hybrid vehicles – onboard diagnostics- Connected Cars technology - Autonomous vehicles - Safety and Collision Avoidance – Navigation support for vehicles- Battery Management- Plug in Electrical vehicle- Charging station- Solar powered vehicles.

**TOTAL 45 PERIODS**

**COURSE OUTCOMES**

**After completion the above subject, students will be able to understand**

- CO1: Ability to understand hardware and software requirements in embedded systems.
- CO2: Ability to do develop data management through cloud interface with processor technology
- CO3: Learn the development smart system solutions and analyse issues.
- CO4: Ability to understand the types of sensors and Bus for control implementation.
- CO5: Capacity to involve communication concepts for vehicle application development.

*Attested*

**OBJECTIVES:**

- To understand the various power quality issues.
- To understand the concept of power and power factor in single phase and three phase systems supplying nonlinear loads
- To understand the conventional compensation techniques used for power factor correction and load voltage regulation.
- To understand the active compensation techniques used for power factor correction
- To understand the active compensation techniques used for load voltage regulation

**UNIT I INTRODUCTION 9**

Introduction - Characterisation of Electric Power Quality: Transients, short duration and long duration voltage variations, Voltage imbalance, waveform distortion, Voltage fluctuations, Power frequency variation, Power acceptability curves – power quality problems: poor load power factor, Non linear and unbalanced loads, DC offset in loads, Notching in load voltage, Disturbance in supply voltage – Power quality standards

**UNIT II ANALYSIS OF SINGLE PHASE AND THREE PHASE SYSTEM 9**

Single phase linear and non linear loads -single phase sinusoidal, non sinusoidal source - supplying linear and nonlinear load - three phase Balance system - three phase unbalanced system - three phase unbalanced and distorted source supplying non linear loads - concept of pf - three phase three wire – three phase four wire system.

**UNIT III CONVENTIONAL LOAD COMPENSATION METHODS 9**

Principle of load compensation and voltage regulation - classical load balancing problem : open loop balancing - closed loop balancing, current balancing - harmonic reduction and voltage sag reduction – analysis of unbalance - instantaneous of real and reactive powers - Extraction of fundamental sequence component from measured.

**UNIT IV LOAD COMPENSATION USING DSTATCOM 9**

Compensating single - phase loads - Ideal three phase shunt compensator structure - generating reference currents using instantaneous PQ theory - Instantaneous symmetrical components theory - Generating reference currents when the source is unbalanced - Realization and control of DSTATCOM - DSTATCOM in Voltage control mode.

**UNIT V SERIES COMPENSATION OF POWER DISTRIBUTION SYSTEM 9**

Rectifier supported DVR - Dc Capacitor supported DVR - DVR Structure - voltage Restoration - Series Active Filter - Unified power quality conditioner.

**TOTAL : 45 PERIODS***Attested*

## COURSE OUTCOMES

After completion the above subject, students will be able to understand

CO1: Able to classify power quality disturbances, their causes, detrimental effects and knowledge about national and international Power quality standards

CO2: Ability to assess the impact of harmonics in single phase and three phase distribution systems

CO3: Capability to adopt passive harmonic mitigation techniques for load compensation and voltage regulation.

CO4: Able to employ dynamic harmonic current compensation methods in distribution systems

CO5: Able to employ dynamic voltage regulation methods in distribution systems

Describe the causes and effects of power quality problems and categorize the various electrical power quality issues in a distribution system

ADVANCED CONTROL SYSTEM

LT P C  
3 0 0 3

### OBJECTIVES:

- To illustrate state feedback control and state observer.
- To illustrate phase plane analysis.
- To illustrate describing function analysis.
- To illustrate the design of optimal controller.
- To illustrate the design of optimal estimator including Kalman Filter

### UNIT I STATE VARIABLE DESIGN

9

Introduction to state model: Effect of state feedback - Pole placement design: Necessary and sufficient condition for arbitrary pole placement, State regulator design - Design of state observers- Separation principle- Design of servo systems: State feedback with integral control

### UNIT II PHASE PLANE ANALYSIS

9

Features of linear and non-linear systems - Common physical non-linearities - Phase plane method: Basic concept, Singular points, Limit cycles, Phase trajectories - Construction of phase trajectories of linear and non-linear systems: Analytical method, Isocline method.

**UNIT III DESCRIBING FUNCTION ANALYSIS 9**

Basic concepts, Derivation of describing functions for common non-linearities: Dead zone, Saturation, Relay, Hysteresis, Backlash – Describing function analysis of non-linear systems, Limit cycles, Stability of oscillations.

**UNIT IV OPTIMAL CONTROL 9**

Introduction: Classical control and optimization, formulation of optimal control problem, Typical optimal control performance measures - Optimal state regulator design: Lyapunov equation, Matrix Riccati equation - LQR steady state optimal control – Application examples.

**UNIT V OPTIMAL ESTIMATION 9**

Introduction: Discrete systems - Optimal estimation: Kalman Filter, Kalman Bucy Filter, Solution by duality principle - Application examples.

**TOTAL : 45 PERIODS**

**COURSE OUTCOMES**

**After completion the above subject, students will be able to understand**

CO1: Design state feedback controller and state observer.

CO2: Analyse linear and nonlinear systems using phase plane method.

CO3: Analyse nonlinear systems using describing function method.

CO4: Design optimal controller.

CO5: Design optimal estimator including Kalman Filter.

*Attested*

**OBJECTIVES:**

- Get familiarized with different architectures and training algorithms of neural networks.
- Get exposed to the various neural modeling and control techniques with case study using simulation tool box.
- Gain Knowledge on fuzzy set theory and fuzzy rules.
- Able to design and implement the fuzzy logic controller with case study using simulation tool box.
- Capable of designing hybrid control schemes, selected optimization algorithms with case study using simulation tool box.

**UNIT I ARTIFICIAL NEURAL NETWORK 9**

Review of fundamentals - Biological neuron, artificial neuron, activation function, single layer perceptron - Limitation - Multi layer perceptron - Back propagation algorithm (BPA) - Recurrent neural network (RNN) - Adaptive resonance theory (ART) based network - Radial basis function network - online learning algorithms, BP through time - RTRL algorithms - Reinforcement learning.

**UNIT II NEURAL NETWORKS FOR MODELING AND CONTROL 9**

Modelling of non-linear systems using ANN - Generation of training data - Optimal architecture-Model validation - Control of non-linear systems using ANN - Direct and indirect neuro control schemes - Adaptive neuro controller - Familiarization with neural network toolbox

**UNIT III FUZZY SET THEORY 9**

Fuzzy set theory - Fuzzy sets - Operation on fuzzy sets - Scalar cardinality, fuzzy cardinality, union and intersection, complement (Yager and Sugeno), equilibrium points, aggregation, projection, composition, cylindrical extension, fuzzy relation - Fuzzy membership functions

**UNIT IV FUZZY LOGIC FOR MODELING AND CONTRO 9**

Modelling of non-linear systems using fuzzy models - TSK model - Fuzzy logic controller - Fuzzification - Knowledge base - Decision making logic - Defuzzification - Adaptive fuzzy systems - Familiarization with fuzzy logic toolbox

**UNIT V HYBRID CONTROL SCHEMES 9**

Fuzzification and rule base using ANN - Neuro fuzzy systems - ANFIS - Fuzzy neuron- Introduction to GA - Optimization of membership function and rule base using Genetic Algorithm - Introduction to support vector machine - Particle swarm optimization - Case study - Familiarization with ANFIS toolbox

**TOTAL : 45 PERIODS****COURSE OUTCOMES**

**After completion the above subject, students will be able to understand**

- CO1: Be able to study the overview of artificial neural network and training algorithms.
- CO2: Be able to analyze problems to formulate models and develop control schemes using Neuro controller systems
- CO3: Be able to design fuzzy controller for non-linear systems
- CO4: Be able to apply engineering fundamentals to use hybrid schemes and optimization algorithms to obtain solution for complex engineering problems.
- CO5: Be capable of using modern IT tool boxes to simulate case studies

## INDUSTRIAL DATA COMMUNICATION

LTPC  
3003

### OBJECTIVES:

- To give an overview of Industrial data communications systems.
- To provide a fundamental understanding of principles, standards, protocols.
- To impart knowledge on industrial networks and Field buses
- To impart the fundamental understanding on SCADA systems.
- To provide insight into some of the new principles those are evolving for future networks.

### UNIT I DATA COMMUNICATION CONCEPTS AND MODELS

9

Concepts: Serial and Parallel Transmission - Data Signals - Data Organization: Signals, Communication codes, Error coding, Protocol concepts – Communication Models: ISO OSI Model, The Internet Model, IEEE 802 Model, Application Models, One, Two, Three, and N-Tier Models, Data Exchange Architectures.

### UNIT II SERIAL COMMUNICATION STANDARDS AND LOCAL AREA NETWORKS

9

Serial Communication standards: TIA/EIA Standards - Interface Signal Functions - PC Serial Communications, Local Area Networks: IEEE 802 LAN Model - LAN Infrastructure - IEEE 802 Media Access Control - Logical Link Control.

### UNIT III NETWORK SOFTWARE, INDUSTRIAL NETWORKS AND FIELD BUSES

9

Commercial Systems - Network Operating Systems - Protocols Used - Industrial Networks and Field buses: Industrial Network Requirements - Process Automation Controllers - Programmable Logic Controllers – HART - PROFIBUS/PROFINET - Foundation Field bus.

**UNIT IV SUPERVISORY CONTROL AND DATA ACQUISITION SYSTEMS****9**

Wide-Area Communications - Modbus RTU Protocol - Communications Security – SCADA Applications: Power Generating Stations - Power Distribution System - Remote Industrial Plant, Wireless SCADA.

**UNIT V WIRELESS COMMUNICATION****9**

Wireless sensor networks: Hardware components - energy consumption of sensor nodes - Network architecture - sensor network scenario. Wireless HART - Existing Wireless Options: IEEE 802.15.4 - ISA 100 - Zigbee - Bluetooth - their relevance to industrial applications.

**TOTAL : 45 PERIODS****COURSE OUTCOMES**

**After completion the above subject, students will be able to understand**

- CO1: Ability to understand the concepts of various industrial data communication networks, protocols and their selection.
- CO2: To be able to select and use most appropriate networking technologies and standards for a given application.
- CO3: To be able to design and ensure that the best practice is followed in installing and commissioning the data communications links.
- CO4: To be able to understand the concepts of SCADA Systems and its applications
- CO5: To be able to understand requirements of industrial application and provide wired or wireless solution.

**OBJECTIVES:**

- To Introduce Fundamentals of Biomedical Engineering
- To study the communication mechanics in a biomedical system with few examples
- To study measurement of certain important electrical and non-electrical parameters
- To understand the basic principles in imaging techniques
- To have a basic knowledge in life assisting and therapeutic devices

**UNIT I FUNDAMENTALS OF BIOMEDICAL ENGINEERING 9**

Cell and its structure - Resting and Action Potential - Nervous system and its fundamentals - Basic components of a biomedical system- Cardiovascular systems- Respiratory systems -Kidney and blood flow - Biomechanics of bone - Biomechanics of soft tissues - Basic mechanics of spinal column and limbs - Physiological signals and transducers - Transducers - selection criteria - Piezo electric, ultrasonic transducers - Temperature measurements - Fibre optic temperature sensors.

**UNIT II NON ELECTRICAL PARAMETERS MEASUREMENT AND DIAGNOSTIC PROCEDURES 9**

Measurement of blood pressure - Cardiac output - Heart rate - Heart sound - Pulmonary function measurements - spirometer - Photo Plethysmography, Body Plethysmography - Blood Gas analysers, pH of blood -measurement of blood pCO<sub>2</sub>, pO<sub>2</sub>, finger-tip oxymeter - ESR, GSR measurements

**UNIT III ELECTRICAL PARAMETERS ACQUISITION AND ANALYSIS 9**

Electrodes - Limb electrodes -floating electrodes - pregelled disposable electrodes - Micro, needle and surface electrodes - Amplifiers, Preamplifiers, differential amplifiers, chopper amplifiers - Isolation amplifier - ECG - EEG - EMG - ERG - Lead systems and recording methods - Typical waveforms - Electrical safety in medical environment, shock hazards - leakage current-Instruments for checking safety parameters of biomedical equipments.

**UNIT IV IMAGING MODALITIES AND ANALYSIS 9**

Radio graphic and fluoroscopic techniques - Computer tomography - MRI - Ultrasonography- Endoscopy - Thermography -Different types of biotelemetry systems - Retinal Imaging - Imaging application in Biometric systems - Analysis of digital images

**UNIT V LIFE ASSISTING, THERAPEUTIC AND ROBOTIC DEVICES 9**

Pacemakers - Defibrillators - Ventilators - Nerve and muscle stimulators - Diathermy - Heart- Lung machine - Audio meters - Dialysers - Lithotripsy - ICCU patient monitoring system - Nano Robots - Robotic surgery - Advanced 3D surgical techniques- Orthopaedic prostheses fixation.

**TOTAL : 45 PERIODS***Attested*

## COURSE OUTCOMES

After completion the above subject, students will be able to understand

CO1: Able to understand the fundamental art of biomedical engineering.

CO2: Able to understand the non-electrical parameters measurement and diagnostic procedures

CO3: Able to understand the concept of bio medical data acquisition and the working of EEG, ECG etc..

CO4: Able to understand about imaging modalities and analysis through computer tomography.

CO5: Able to understand the life assisting, therapeutic and robotic devices and their technical applications.

ADAPTIVE CONTROL SYSTEM

LTPC

3003

### OBJECTIVES:

To introduce adaptive control.

- To introduce the need for and effects of adaptive control
- To illustrate study the parameter identification of systems.
- To illustrate the self-tuning of PID controllers based on parameter identification.
- To illustrate the model reference adaptive control.
- To introduce practical application through case studies.

### UNIT I INTRODUCTION

9

Introduction to adaptive control - Effects of process variations - Adaptive control schemes - Adaptive control problem - Non-parametric identification - Step response method - Impulse response method - Frequency response method.

**UNIT II PARAMETRIC IDENTIFICATION 9**

Linear in parameter models - ARX - ARMAX - ARIMAX - Least square estimation - Recursive least square estimation - Extended least square estimation - Maximum likelihood estimation - Introduction to non-linear systems identification - Pseudo random binary sequence.

**UNIT III SELF-TUNING REGULATOR 9**

Deterministic in-direct self-tuning regulators - Deterministic direct self-tuning regulators -Introduction to stochastic self-tuning regulators - Stochastic indirect self-tuning regulator.

**UNIT IV MODEL REFERENCE ADAPTIVE CONTROLLER 9**

The MIT rule - Lyapunov theory - Design of model reference adaptive controller using MIT rule and Lyapunov theory - Relation between model reference adaptive controller and self-tuning regulator.

**UNIT V TUNING OF CONTROLLERS AND CASE STUDIES 9**

Design of gain scheduling controller - Auto-tuning of PID regulator - Stability analysis of adaptive controllers - Application of adaptive control in chemical reactor, distillation column and variable area tank system.

**TOTAL : 45 PERIODS****COURSE OUTCOMES**

**After completion the above subject, students will be able to understand**

CO1: Understand the effect of parameter variation and principle of adaptive control schemes.

CO2: Distinguish different parametric identification methods.

CO3: Understand Deterministic and Stochastic Self Tuning Regulators.

CO4: Design of model reference adaptive controller

CO5: Design gain scheduling controller and apply adaptive control schemes for industrial processes.

**OBJECTIVES:**

- To know various electric drives and traction motors with applications
- To introduce the energy saving concept by different ways of illumination.
- To understand the different methods of electric heating and electric welding.
- To know how to utilize the solar radiation into electrical energy for different applications
- To study basic principles of wind energy conversion

<b>UNIT I</b>	<b>ELECTRIC DRIVES AND TRACTION</b>	<b>9</b>
Fundamentals of electric drive - choice of an electric motor - application of motors for particular services traction generator set, traction motors, power transformers - characteristic features of traction motor - systems of railway electrification - electric braking - train movement and energy consumption - traction motor control - track equipment and collection gear.		
<b>UNIT II</b>	<b>ILLUMINATION</b>	<b>9</b>
Introduction - definition and meaning of terms used in illumination engineering - classification of light sources - incandescent lamps, sodium vapour lamps, mercury vapour lamps, fluorescent lamps – design of illumination systems - indoor lighting schemes - factory lighting halls - outdoor lighting schemes - flood lighting - street lighting - UPS- energy saving lamps, LED – working principle of air conditioning system		
<b>UNIT III</b>	<b>HEATING AND WELDING</b>	<b>9</b>
Introduction - advantages of electric heating - modes of heat transfer - methods of electric heating - resistance heating - arc furnaces - induction heating - dielectric heating - electric welding – types - resistance welding - arc welding - power supply for arc welding - radiation welding.		
<b>UNIT IV</b>	<b>SOLAR RADIATION AND SOLAR ENERGY COLLECTORS</b>	<b>9</b>
Introduction - solar constant – terrestrial solar radiation - solar radiation geometry – estimation of average solar radiation - physical principles of the conversion of solar radiation into heat - flat-plate collectors - transmissivity of cover system - energy balance equation and collector efficiency - concentrating collector - advantages and disadvantages of concentrating collectors - performance analysis of a cylindrical parabolic concentrating collector.		
<b>UNIT V</b>	<b>WIND ENERGY</b>	<b>9</b>
Introduction - basic principles of wind energy conversion - site selection considerations - basic components of a WECS (Wind Energy Conversion System) - Classification of WECS - types of wind machines - analysis of aerodynamic forces acting on the blade - performances of wind.		
		<b>TOTAL: 45 PERIODS</b>

**COURSE OUTCOMES**

**After completion the above subject, students will be able to understand**

CO1: Ability to choose suitable electric drives for different applications

CO2: Ability to design the illumination systems for energy saving

CO3: Ability to understand the utilization of electrical energy for heating and welding purposes

CO4: Ability to know the effective usage of solar energy for electrical applications

CO5: Able to locate the wind farm for generating electrical energy

### MICRO ELECTRO MECHANICAL SYSTEMS

LT P C  
3 0 0 3

#### OBJECTIVES:

- To introduce MEMS technology
- To study the different MEMS materials and their properties
- To study the different fabrication process used in MEMS technology.
- To introduce the fundamental working principles of different micro sensors and actuators.
- To provide insight on application areas of MEMS technology

#### UNIT I INTRODUCTION

9

Intrinsic Characteristics of Micro systems - Macro and micro Sensors and Actuators -Scaling laws - Silicon and polymer based MEMS processes and MEMS Materials

#### UNIT II MICROMACHINING

9

Bulk Micromachining - Surface micromachining, LIGA processes and Polymer MEMS fabrication process.

#### UNIT III SENSORS AND ACTUATORS - I

9

Electrostatic sensors - Parallel plate capacitors - Applications - Micro motors - Inter digitated Finger capacitor - Comb drive devices - Thermal Sensing and Actuation - Thermal expansion- Thermal couples - Thermal resistors - Applications - Microfluidics for sensing and actuation applications.

#### UNIT IV SENSORS AND ACTUATORS - II

9

Piezo resistive sensors - Piezo resistive sensor materials - Stress analysis of mechanical elements - Applications to Inertia, Pressure, Tactile and Flow sensors Piezoelectric sensors and actuators - piezoelectric effects - piezoelectric materials - Applications to Inertia , Acoustic, Tactile and Flow sensors.

*Attested*

**UNIT V APPLICATIONS****9**

Application to Acceleration, Pressure, Flow, Chemical, Inertial sensors - Optical MEMS - Bio MEMS - RF MEMS - Energy Harvesting - NEMS devices.

**TOTAL : 45 PERIODS****COURSE OUTCOMES**

**After completion the above subject, students will be able to understand**

CO1: Understanding the material properties and the significance of MEMS.

CO2: Knowledge delivery on micromachining and micro fabrication.

CO3: Applying the concepts of MEMS to design the sensors and actuators.

CO4: Applying the fabrication mechanism for MEMS sensor and actuators.

CO5: Able to identify the right MEMS device against the applications.

3. M.H.Bao, "Micromechanical Transducers: Pressure sensors, Accelerometers and Gyroscopes", Elsevier, Newyork, 2000.

**EE5032****ENERGY AUDITING****L T P C****3 0 0 3****OBJECTIVES:**

- To understand the current energy scenario and importance of energy conservation.
- To get familiarization with the measuring instruments used for the energy auditing
- To emphasize the need for energy audit on various electrical systems.
- To determine the methods of energy audit for the various industrial systems.
- To illustrate the concepts of different energy efficient devices.

**UNIT I GENERAL ASPECTS OF ENERGY AUDIT****9**

Commercial and Non-commercial energy - energy needs of growing economy - energy pricing - energy sector reforms - energy conservation and its importance - Re-structuring of the energy supply sector - Energy Conservation Act-2001 and its features - electricity tariff - Demand Side

Management – Energy Audit - Need for Energy Audit -Energy audit Methodology – understanding energy costs

**UNIT II INSTRUMENTS FOR ENERGY AUDITING 9**

Energy Audit Instruments - classification - basic precautions - Need for instruments- Types - ultrasonic non-contact type flow meters for liquids - Clamp-on type power/energy meters - Anemometers/Pitot tube for measuring velocity of gas - Digital Manometer - Tachometer - Digital Thermometers for liquid/surface temperature - Pyrometer - Thermal Imagers - Lux Meter - Combustion Gas Analyzer - Pressure Gauges - Digital Hydro-temperature meter for temperature and RH measurement

**UNIT III ENERGY EFFICIENCY IN ELECTRICAL SYSTEMS 9**

Electrical system: Electricity billing, electrical load management and maximum demand control, power factor improvement and its benefit, selection and location of capacitors, performance assessment of PF capacitors, distribution and transformer losses. Electric motors: Types, losses in induction motors, motor efficiency, factors affecting motor performance, rewinding and motor replacement issues, energy saving opportunities with energy efficient motors – case study

**UNIT IV ENERGY EFFICIENCY IN INDUSTRIAL SYSTEMS 9**

Compressed Air System: Types of air compressors -compressor efficiency, efficient compressor operation, compressed air system components -Factors affecting the performance and savings opportunities in HVAC, Fans and blowers: Types, Performance Evaluation, energy conservation opportunities, Pumps and Pumping System: Types, Performance Evaluation, energy conservation opportunities – case study

**UNIT V ENERGY EFFICIENT TECHNOLOGIES IN ELECTRICAL SYSTEMS 9**

Maximum demand controller - automatic power factor controllers -Energy Efficient transformer – Energy Efficient motors - soft starters with energy saver - Variable Speed Drives -Energy Efficient Lighting System: Light source, choice of lighting, luminance requirements - Electronic ballast - occupancy sensors - Energy saving potential of each technology

**TOTAL : 45 PERIODS**

**COURSE OUTCOMES**

**After completion the above subject, students will be able to understand**

- CO1: Develop the ability to learn about the need for energy auditing process and usage of energy audit equipment.
- CO2: Students will learn about the basic concepts of economic analysis and understand the energy management techniques
- CO3: Learn the fundamental concepts and energy saving potentials for various electrical equipment
- CO4: Develop the skills to learn and understand the energy efficient tools for industrial systems
- CO5: Students will be able to learn about the concepts of energy efficiency in electrical utilities

NANO TECHNOLOGY

L T P C  
3 0 0 3

### OBJECTIVES:

- To introduce the concept and knowledge of Nano science and Nanotechnology.
- To create awareness of clean room environment & societal implications of Nanotechnology
- To know about preparation methods and nanofabrication techniques.
- To know about the different characterization techniques used for Nano systems.
- To understand the significant applications of nanotechnology

### UNIT I INTRODUCTION:

9

Overview of Nano scale Science and Technology- Implications on Science, Engineering and society - nano structured materials- Properties- Nanotoxicology-Clean room standards.

### UNIT II PREPARATION ROUTES:

9

Preparation of nanoscale materials: precipitation, mechanical milling, colloidal routes, self assembly; vapour phase deposition, CVDs, sputtering, evaporation, molecular beam epitaxy, atomic layer epitaxy.

*Attested*

### UNIT III LITHOGRAPHY FOR NANOSCALE DEVICES:

9

Lithography process, optical/UV, electron beam, Ion Beam and x-ray lithography, Nano imprint technique- Scanning probe lithography.

**UNIT IV CHARACTERIZATION TECHNIQUES: 9**

X-ray and Neutron diffraction technique, Scanning Electron Microscopy plus environmental techniques, Transmission Electron Microscopy including high-resolution imaging, analytical electron microscopy, EDX and EELS, Surface Analysis techniques, XPS, SIMS, Auger.

**UNIT V EVOLVING INTERFACES OF NANO: 9**

Applications of nanotechnology: NEMS – Nanosensor – nanomedicines -Nano applications in electrical engineering -Nanoelectronics: quantum transport devices, molecular electronics devices, quantum computing ,memory, CNT and its applications, Nano motor, Nano robot, energy efficient battery technology, Nano dielectrics, lighting system, solar cell.

**TOTAL : 45 PERIODS**

**COURSE OUTCOMES**

**After completion the above subject, students will be able to understand**

- CO1: Students will be able to understand the significance and implication of nanotechnology
- CO2: To be able to apply the concept of nanotechnology for Electrical and Electronics Engineering Applications.
- CO3: Familiar with Rules and guidelines of clean room standards
- CO4: Understanding the Fabrication methods and characterization techniques
- CO5: Students will be able to know the recent trends of nanotechnology

AD5091

### CONSTITUTION OF INDIA

L T P C  
3 0 0 0

#### OBJECTIVES:

- Teach history and philosophy of Indian Constitution.
- Describe the premises informing the twin themes of liberty and freedom from a civil rights perspective.
- Summarize powers and functions of Indian government.
- Explain emergency rule.
- Explain structure and functions of local administration.

#### UNIT I INTRODUCTION

9

History of Making of the Indian Constitution-Drafting Committee- (Composition & Working) - Philosophy of the Indian Constitution-Preamble-Salient Features

#### UNIT II CONTOURS OF CONSTITUTIONAL RIGHTS & DUTIES

9

Fundamental Rights-Right to Equality-Right to Freedom-Right against Exploitation Right to Freedom of Religion-Cultural and Educational Rights-Right to Constitutional Remedies Directive Principles of State Policy-Fundamental Duties

#### UNIT III ORGANS OF GOVERNANCE

9

Parliament-Composition-Qualifications and Disqualifications-Powers and Functions-Executive President-Governor-Council of Ministers-Judiciary, Appointment and Transfer of Judges, Qualifications Powers and Functions

#### UNIT IV EMERGENCY PROVISIONS

9

Emergency Provisions - National Emergency, President Rule, Financial Emergency

#### UNIT V LOCAL ADMINISTRATION

9

District's Administration head- Role and Importance-Municipalities- Introduction- Mayor and role of Elected Representative-CEO of Municipal Corporation-Pachayati raj- Introduction- PRI- Zila Pachayat- Elected officials and their roles- CEO ZilaPachayat- Position and role-Block level-Organizational Hierarchy (Different departments)-Village level- Role of Elected and Appointed officials-Importance of grass root democracy

**TOTAL: 45 PERIODS**

#### COURSE OUTCOMES

**After completion the above subject, students will be able to understand**

CO1: Able to understand history and philosophy of Indian Constitution.

CO2: Able to understand the premises informing the twin themes of liberty and freedom from a civil rights perspective.

CO3: Able to understand powers and functions of Indian government.

CO4: Able to understand emergency rule.

CO5: Able to understand structure and functions of local administration.

**VALUE EDUCATION**

**L T P C**  
**3 0 0 0**

### OBJECTIVES:

- Develop knowledge of self-development
- Explain the importance of Human values
- Develop the overall personality through value education
- Overcome the self destructive habits with value education
- Interpret social empowerment with value education

### UNIT I INTRODUCTION TO VALUE EDUCATION 9

Values and self-development -Social values and individual attitudes, Work ethics, Indian vision of humanism, Moral and non- moral valuation, Standards and principles, Value judgements

### UNIT II IMPORTANCE OF VALUES 9

Importance of cultivation of values, Sense of duty, Devotion, Self-reliance, Confidence, Concentration, Truthfulness, Cleanliness. Honesty, Humanity, Power of faith, National Unity, Patriotism, Love for nature, Discipline

### UNIT III INFLUENCE OF VALUE EDUCATION 9

Personality and Behaviour development - Soul and Scientific attitude. Positive Thinking, Integrity and discipline, Punctuality, Love and Kindness, Avoid fault Thinking, Free from anger, Dignity of labour, Universal brotherhood and religious tolerance, True friendship Happiness Vs suffering, love for truth.

### UNIT IV REINCARNATION THROUGH VALUE EDUCATION 9

Aware of self-destructive habits, Association and Cooperation, Doing best for saving nature Character and Competence -Holy books vs Blind faith, Self-management and Good health, Science of reincarnation

### UNIT V VALUE EDUCATION IN SOCIAL EMPOWERMENT 9

Equality, Non violence, Humility, Role of Women, All religions and same message, Mind your Mind, Self-control, Honesty, Completion effectively

**TOTAL: 45 PERIODS**

## COURSE OUTCOMES

After completion the above subject, students will be able to understand

CO1: Gain knowledge of self-development

CO2: Learn the importance of Human values

CO3: Develop the overall personality through value education

CO4: Overcome the self destructive habits with value education

CO5: Interpret social empowerment with value education

PEDAGOGY STUDIES

LTPC  
3000

## OBJECTIVES:

- Understand the methodology of pedagogy.
- Compare pedagogical practices used by teachers in formal and informal classrooms in developing countries.
- Infer how can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy.
- Illustrate the factors necessary for professional development.
- Identify the Research gaps in pedagogy.

### UNIT I INTRODUCTION AND METHODOLOGY:

9

Aims and rationale, Policy background, Conceptual framework and terminology - Theories of learning, Curriculum, Teacher education - Conceptual framework, Research questions - Overview of methodology and Searching.

### UNIT II THEMATIC OVERVIEW

9

Pedagogical practices are being used by teachers in formal and informal classrooms in developing countries - Curriculum, Teacher education.

### UNIT III EVIDENCE ON THE EFFECTIVENESS OF PEDAGOGICAL PRACTICES

9

Methodology for the in depth stage: quality assessment of included studies - How can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy? - Theory of change - Strength and nature of the body of evidence for effective pedagogical practices - Pedagogic theory and pedagogical approaches - Teachers' attitudes and beliefs and Pedagogic strategies.

**UNIT IV PROFESSIONAL DEVELOPMENT****9**

Professional development: alignment with classroom practices and follow up support - Peer support - Support from the head teacher and the community - Curriculum and assessment - Barriers to learning: limited resources and large class sizes

**UNIT V RESEARCH GAPS AND FUTURE DIRECTIONS****9**

Research design - Contexts - Pedagogy - Teacher education - Curriculum and assessment - Dissemination and research impact.

**TOTAL: 45 PERIODS****COURSE OUTCOMES**

**After completion the above subject, students will be able to understand**

CO1: Understand the methodology of pedagogy.

CO2: Understand Pedagogical practices used by teachers in formal and informal classrooms in developing countries.

CO3: Find how can teacher education (curriculum and practicum) and the school curriculum and guidance materials best support effective pedagogy.

CO4: Know the factors necessary for professional development.

CO5: Identify the Research gaps in pedagogy.

Attested

**OBJECTIVES:**

- Develop healthy mind in a healthy body thus improving social health also improve efficiency
- Invent Do's and Don't's in life through Yam
- Categorize Do's and Don't's in life through Niyam
- Develop a healthy mind and body through YogAsans
- Invent breathing techniques through Pranayam

**UNIT I INTRODUCTION TO YOGA** 9  
Definitions of Eight parts of yog. ( Ashtanga )

**UNIT II YAM** 9  
Do's and Don't's in life.  
Shaucha, santosh, tapa, swadhyay, ishwarpranidhan

**UNIT III NIYAM** 9  
Do's and Don't's in life.  
Ahinsa, satya, astheya, bramhacharya and aparigraha

**UNIT IV ASAN** 9  
Various yog poses and their benefits for mind & body

**UNIT V PRANAYAM** 9  
Regularization of breathing techniques and its effects-Types of pranayam

**TOTAL: 45 PERIODS****COURSE OUTCOMES****After completion the above subject, students will be able to understand**

CO1: Develop healthy mind in a healthy body thus improving social health also improve efficiency

CO2: Learn Do's and Don't's in life through Yam

CO3: Learn Do's and Don't's in life through Niyam

CO4: Develop a healthy mind and body through YogAsans

CO5: Learn breathing techniques through Pranayam

**OBJECTIVES:**

- Develop basic personality skills holistically
- Develop deep personality skills holistically to achieve happy goals
- Rewrite the responsibilities
- Reframe a person with stable mind, pleasing personality and determination
- Discover wisdom in students

**UNIT I NEETISATAKAM-HOLISTIC DEVELOPMENT OF PERSONALITY - I 9**

Verses- 19,20,21,22 (wisdom) - Verses- 29,31,32 (pride &amp; heroism) - Verses- 26,28,63,65 (virtue)

**UNIT II NEETISATAKAM-HOLISTIC DEVELOPMENT OF PERSONALITY - II 9**

Verses- 52,53,59 (dont's) - Verses- 71,73,75,78 (do's)

**UNIT III APPROACH TO DAY TO DAY WORK AND DUTIES 9**

Shrimad BhagwadGeeta: Chapter 2-Verses 41, 47,48 - Chapter 3-Verses 13, 21, 27, 35 Chapter 6-Verses 5,13,17,23, 35 - Chapter 18-Verses 45, 46, 48

**UNIT IV STATEMENTS OF BASIC KNOWLEDGE – I 9**

Statements of basic knowledge - Shrimad BhagwadGeeta: Chapter2-Verses 56, 62, 68 Chapter 12 - Verses 13, 14, 15, 16,17, 18

**UNIT V PERSONALITY OF ROLE MODEL - SHRIMAD BHAGWADGEETA 9**

Chapter2-Verses 17, Chapter 3-Verses 36,37,42 - Chapter 4-Verses 18, 38,39 Chapter18 - Verses 37,38,63

**TOTAL: 45 PERIODS****COURSE OUTCOMES****After completion the above subject, students will be able to understand**

CO1: To develop basic personality skills holistically

CO2: To develop deep personality skills holistically to achieve happy goals

CO3: To rewrite the responsibilities

CO4: To reframe a person with stable mind, pleasing personality and determination

CO5: To awaken wisdom in students

**COURSE OBJECTIVES**

The course will introduce the students to

- get a knowledge about Indian Culture
- Know Indian Languages and Literature religion and philosophy and the fine arts in India
- Explore the Science and Scientists of Ancient, Medieval and Modern India
- Understand education systems in India

**UNIT I INTRODUCTION TO CULTURE 9**

Culture, civilization, culture and heritage, general characteristics of culture, importance of culture in human literature, Indian Culture, Ancient India, Medieval India, Modern India.

**UNIT II INDIAN LANGUAGES AND LITERATURE 9**

Indian Languages and Literature - I: Languages and Literature of South India, - Indian Languages and Literature - II: Northern Indian Languages & Literature

**UNIT III RELIGION AND PHILOSOPHY 9**

Major religions practiced in India and Understanding their Philosophy – religious movements in Modern India (Selected movements only)

**UNIT IV FINE ARTS IN INDIA (ART, TECHNOLOGY & ENGINEERING) 9**

Indian Painting, Indian handicrafts, Music, divisions of Indian classic music, modern Indian music, Dance and Drama, Indian Architecture (ancient, medieval and modern), Science and Technology in India, development of science in ancient, medieval and modern India

**UNIT V EDUCATION SYSTEM IN INDIA 9**

Education in ancient, medieval and modern India, aims of education, subjects, languages, Science and Scientists of Ancient India, Science and Scientists of Medieval India, Scientists of Modern India

**TOTAL: 45PERIODS****COURSE OUTCOMES**

After completion the above subject, students will be able to understand

CO1: Understand philosophy of Indian culture.

CO2: Distinguish the Indian languages and literature.

CO3: Learn the philosophy of ancient, medieval and modern India.

CO4: Acquire the information about the fine arts in India.

CO5: Know the contribution of scientists of different eras.

CO6: Understand education systems in India

SANGA TAMIL LITERATURE APPRECIATION

L T P C  
3 0 0 0

**Course Objectives:** The main learning objective of this course is to make the students an appreciation for:

1. Introduction to Sanga Tamil Literature.
2. 'Agathinai' and 'Purathinai' in Sanga Tamil Literature.
3. 'Attruppadai' in Sanga Tamil Literature.
4. 'Puranaanuru' in Sanga Tamil Literature.
5. 'Pathitru Paththu' in Sanga Tamil Literature.

<b>UNIT I</b>	<b>SANGA TAMIL LITERATURE AN INTRODUCTION</b>	<b>9</b>
Introduction to Tamil Sangam-History of Tamil Three Sangams-Introduction to Tamil Sangam Literature-Special Branches in Tamil Sangam Literature- Tamil Sangam Literature's Grammar-Tamil Sangam Literature's parables.		
<b>UNIT II</b>	<b>'AGATHINAI' AND 'PURATHINAI'</b>	<b>9</b>
Tholkappiyar's Meaningful Verses-Three literature materials-Agathinai's message- History of Culture from Agathinai- Purathinai-Classification-Mesaage to Society from Purathinai.		
<b>UNIT III</b>	<b>'ATTRUPPADAI'</b>	<b>9</b>
Attruppadai Literature-Attruppadai in 'Puranaanuru'-Attruppadai in 'Pathitru Paththu'-Attruppadai in 'Paththupaattu'.		
<b>UNIT IV</b>	<b>'PURANAANURU'</b>	<b>9</b>
Puranaanuru on Good Administration, Ruler and Subjects-Emotion & its Effect in Puranaanuru.		
<b>UNIT V</b>	<b>'PATHITRUPATHTHU'</b>	<b>9</b>
Pathitru Paththu in 'Ettuthogai'-Pathitru Paththu's Parables-Tamil dynasty: Valor, Administration, Charity in Pathitru Paththu- Mesa age to Society from Pathitru Paththu.		

**Total (L: 45) = 45 PERIODS**

## COURSE OUTCOMES

**After completion the above subject, students will be able to understand**

- CO1: Appreciate and apply the messages in Sanga Tamil Literature in their life.  
CO2: Differentiate 'Agathinai' and 'Purathinai' in their personal and societal life.  
CO3: Appreciate and apply the messages in 'Attruppadai' in their personal and societal life.  
CO4: Appreciate and apply the messages in 'Puranaanuru' in their personal and societal life.  
CO5: Appreciate and apply the messages in 'Pathitru Paththu' in their personal and societal life.

LANGUAGE AND COMMUNICATION

LT P C  
3 0 0 3

### COURSE DESCRIPTION

This course offers an introduction to language and communication. The primary goal of this course is to familiarize students with key ideas related to communication using language as well as non verbal means. Ideas related to the use of language and the underlying power structures are also examined. The course also examines the role of media in communication and in the dissemination of ideas as well as opinions.

### Objectives

- ✓ To familiarize students with the concept of communication using linguistic and non linguistic resources.
- ✓ To help students ask critical questions regarding facts and opinions.
- ✓ To provide students with the material to discuss issues such as language and power structures.
- ✓ To help students think critically about false propaganda and fake news.

### UNIT I LINGUISTIC AND NON-LINGUISTIC RESOURCE OF COMMUNICATION: 9

- a) Writing and Speech
- b) Distinction between language structure and language use, form and function, acceptability and grammaticality
- c) Gestures and Body language, pictures and symbols, cultural appropriacy

Attested

**UNIT II STRUCTURE OF WRITING/CONVERSATION: 9**

- a) Language skills and the communication cycle; speaking and listening, writing and reading
- b) Initiating and closing conversations, intervention, turn taking
- c) Writing for target reader, rhetorical devices and strategies
- d) Coherence and Cohesion in speech and writing

**UNIT III POWER STRUCTURE AND LANGUAGE USE: 9**

- a) Gender and language use
- b) Politeness expressions and their use
- c) Ethical dimensions of language use
- d) Language rights as part of human rights

**UNIT IV MEDIA COMMUNICATION: 9**

- a) Print media, electronic media, social media
- b) Power of media
- c) Manufacturing of opinion, fake news and hidden agendas

**UNIT V PERSUASIVE COMMUNICATION AND MISCOMMUNICATION: 9**

- a) Fundamentals of persuasive communication
- b) Persuasive strategies
- c) Communication barriers

**TOTAL : 45 PERIODS**

**COURSE OUTCOMES**

**After completion the above subject, students will be able to understand**

CO1: Students will be able to use linguistic and non linguistic resources of language in an integrated manner for communication.

CO2: Students will be able to analyse communication in terms of facts and opinions.

CO3: Students will be able to discuss, analyse and argue about issues related to language and power.

CO4: Communicative competency, context and situation, combination of linguistic and non-linguistic elements of communication

**HU5174****PSYCHOLOGICAL PROCESSES****L T P C  
3 0 0 3****COURSE DESCRIPTION**

Psychological Processes course is designed for students to be aware of the basic principles of psychology for the better understanding of people's psyche and behaviour around them. This course enables learners to use the optimal use of different forms of thinking skills and thereby results in effective communication in diverse situations. Every unit of the syllabus highlights the psychological process of people, the most powerful and constructive use of perceptions.

**OBJECTIVES**

The major objectives of this course is

- To develop students' awareness - on psychology, learning behavior and usage of perception effectively.
- To learn to use the various kinds of thinking in a formal context.
- To critically evaluate content and comprehend the message on the bases of perception, personality and intelligence.

**UNIT 1: INTRODUCTION**

What is psychology? - Why study psychology? - Psychology as science - Behavior and its role in human communication - socio-cultural bases of behaviour - Biological bases of behavior - Brain and its functions - Principles of Heredity - Cognition and its functions Fields of psychology - Cognitive and Perceptual - Industrial and Organizational.

**UNIT 2: SENSORY & PERCEPTUAL PROCESSES**

Some general properties of Senses: Visual system - the eye, colour vision - Auditory system - Hearing, listening, Sounds - Other senses - Selective attention; physiological correlates of attention; Internal influences on perception learning - set - motivation & emotion - cognitive styles; External influences on perception figure and ground separation - movement - organization - illusion; Internal-external interactions: Constancy - Depth Perception- Binocular & Monocular Perception; Perceptual defense & Perceptual vigilance; Sensory deprivation -Sensory bombardment; ESP - Social Perception.

**UNIT 3: COGNITION & AFFECT**

Learning and memory - philosophy of mind - concepts - words - images - semantic features - Association of words - Repetition - Retrieval - Chunking - Schemata - Emotion and motivation - nature and types of motivation - Biological & Psychosocial motivation - nature and types of emotions - physiological & cognitive bases of emotions - expressions of emotions - managing negative emotions - enhancing positive emotions.

*Attested*

#### UNIT 4: THINKING, PROBLEM-SOLVING & DECISION MAKING

Thinking skills - Types of thinking skills - Concrete & Abstract thinking - Convergent & Divergent - Analytical & Creative thinking - Problem & Possibility thinking - Vertical & Lateral thinking - Problem solving skills - stages of problem solving skills - Decision making - intuition and reasoning skills - Thinking and language - The thinking process- concepts, problem solving, decision-making, creative thinking; language communication.

#### UNIT 5: PERSONALITY & INTELLIGENCE

Psychological phenomena & Attributes of humans - cognition, motivation, and behavior - thoughts, feelings, perceptions, and actions – personality dimensions, traits, patterns - Specialized knowledge, performance accomplishments, automaticity or ease of functioning, skilled performance under challenge - generative flexibility, and speed of learning or behavior change.

**COURSE DESCRIPTION**

This course introduces students to multidisciplinary studies in Education, Technology and Society. Students will get an understanding of the relationship between education, technology and society. They will also learn about the long lasting impact of good education in a technologically advanced society.

**COURSE OBJECTIVES:**

The course aims

- To help learners understand the basics of different types of technology utilised in the field of education
- To make them realize the impact of education in society
- To make them evolve as responsible citizen in a technologically advanced society

**UNIT I INDIAN EDUCATION SYSTEM**

Gurukul to ICT education - Teacher as facilitator - Macaulay's Minutes - English medium vs Regional medium - Importance of Education in Modern India - Challenges in Education

**UNIT II LEARNING THEORIES**

Learning Theories - Behaviorism - Cognitivism - Social Constructivism - Humanism Learning Styles  
8. Multiple Intelligences - Emotional Intelligence - Blooms Taxonomy

**UNIT III TECHNOLOGICAL ADVANCEMENTS**

Web tools - Social media in education - elearning - MOOCs - Mobile assisted learning - Learning Apps - Blended learning - Self-directed learning

**UNIT IV EDUCATIONAL TECHNOLOGY**

Technological implications on Education - Teaching, Learning & Testing with Technology - Advantages and drawbacks - Critical analysis on the use of technology

**UNIT V ETHICAL IMPLICATIONS**

Plagiarism - Online Copyright issues - Ethical and value implications of education and technology on individual and society.

**TOTAL:45 PERIODS****TEACHING METHODS**

Teaching modes include guest lectures, discussion groups, presentations, visual media, and a practicum style of learning.

**EVALUATION**

As this course is not a content based course, it focuses more on the ethical use of technology in education and society, and so, evaluation can be based on assignments and discussions. So there is no need for an end semester examination. Internal marks can be taken for the total marks.

**INTERNAL (100 % WEIGHTAGE)**

- (a) Written Test (40 marks)
- (b) Assignment: Write a real time report of the technology use in any school / college (15 marks)
- (c) Presentation: Students choose any one of the technological tools and present its relevance to education and society (15 marks)

- (d) Group discussion: Students discuss in groups on case studies relating to various challenges in education and technology use in society (20 marks)
- (e) Blog entry: Making weekly blog posts in Class Blog on the topics related to the course posted by the instructor and commenting on others' posts. (10 marks)

## REFERENCES

- 1) Education and Social order by Bertrand Russel
- 2) Theories of learning by Bower and Hilgard
- 3) Technology and Society by Jan L Harrington

## COURSE OUTCOMES

After completion the above subject, students will be able to understand

CO1: Understand the various apps of technology apps and use them to access, generate and present information effectively.

CO2: Apply technology based resources and other media formats equitably, ethically and legally.

CO3: Integrate their technical education for betterment of society as well as their personal life.

CO4: Understand the technology of education.

CO5: Know the ethical and value Implication

## HSMC– ELECTIVES – HUMANITIES II (EVEN SEMESTER)

HU5271

GENDER, CULTURE AND DEVELOPMENT

L T P C

3 0 0 3

### COURSE DESCRIPTION

This course offers an introduction to Gender Studies that asks critical questions about the meanings of sex and gender in Indian society. The primary goal of this course is to familiarize students with key issues, questions and debates in Gender Studies, both historical and contemporary drawing from Indian literature and media studies, to examine cultural assumptions about sex, gender, and sexuality. This course integrates analysis of current events through student presentations, aiming to increase awareness of contemporary and historical experiences of women, and of the multiple ways that sex and gender interact with class, caste and other social identities. This course also seeks to build an understanding of the concepts of gender, gender-based violence, sexuality, and rights and their impact on development through a number of discussions, exercises and reflective activities.

### Objectives

- ✓ To familiarize students with the concepts of sex and gender through literary and media texts.
- ✓ To help students ask critical questions regarding gender roles in society.
- ✓ To provide students with the material to discuss gender issues such as gender based discrimination, violence and development.
- ✓ To help students think critically about gender based problems and solutions.

### COURSE OUTCOMES

After completion the above subject, students will be able to understand

CO1: Students will be able to critically read literary and media texts and understand the underlying gender perspectives in them.

CO2: Students will be able to analyse current social events in the light of gender perspectives.

CO3: Students will be able to discuss, analyse and argue about issues related to gender and their impact on society, culture and development.

CO4: Students will be able to know the concept of violence

CO5: Students will be able to know the gender and culture

### UNIT I: Introduction to Gender

- Definition of Gender
- Basic Gender Concepts and Terminology
- Exploring Attitudes towards Gender
- Social Construction of Gender

Texts:

1. Sukhu and Dukhu (Amar Chitra Katha)
2. The Cat who became a Queen (Folk tale, J. Hinton Knowles, Folk-Tales of Kashmir. London: Kegan Paul, Trench, Trübner, and Company, 1893, pp. 8-10.)

### UNIT II: Gender Roles and Relations

- Types of Gender Roles
- Gender Roles and Relationships Matrix

Gender-based Division and Valuation of Labour

### TEXTBOOKS

*Attested*

1. Muniyakka (Short Story, Lakshmi Kannan, Nandanvan and Other Stories, Hyderabad: Orient Blackswan, 2011)
2. Video: Witness: Freeing Women From Cleaning Human Waste (2014, HRW, Manual Scavenging, India)

### UNIT III: Gender Development Issues

- Identifying Gender Issues
- Gender Sensitive Language
- Gender, Governance and Sustainable Development
- Gender and Human Rights
- Gender and Mainstreaming

Texts:

1. The Many Faces of Gender Inequality (Essay, Amartya Sen, Frontline, Volume 18 - Issue 22, Oct. 27 - Nov. 09, 2001)
2. Tell Us Marx (Poem, Mallika Sengupta, Translated by Sanjukta Dasgupta)

### UNIT IV: Gender-based Violence

- The concept of violence
- Types of Gender-based violence
- The relationship between gender, development and violence
- Gender-based violence from a human rights perspective

Texts:

1. Lights Out (Play, Manjula Padmanabhan)
2. Lights Out (Video of play enacted)

### UNIT V: Gender and Culture

- Gender and Film
- Gender, Media and Advertisement

Texts:

1. Mahanagar (Movie: Satyajit Ray)
2. Beti Bachao Beti Padhao Advertisements

**READINGS:** Relevant additional texts for readings will be announced in the class. Classes will consist of a combination of activities: dialogue-based lectures, discussions, collaborative learning activities, group work and in-class assignments.

### ASSESSMENT AND GRADING:

Discussion & Classroom Participation: 20%

Project/Assignment: 30%

End Term Exam: 50%

### COURSE OUTCOMES

**After completion the above subject, students will be able to understand**

CO1: Students will be able to critically read literary and media texts and understand the underlying gender perspectives in them.

CO2: Students will be able to analyse current social events in the light of gender perspectives.

CO3: Students will be able to discuss, analyse and argue about issues related to gender and their impact on society, culture and development.

CO4: Students will be able to know the concept of violence

**FILM APPRECIATION**

**L T P C**  
**3 0 0 3**

### **COURSE DESCRIPTION**

This is an intensive course designed to promote comprehensive understanding and insights into the nature of cinema and other related forms and practices. Movies, though at times are used more as escapism, they are also a true art form and expressive tool used by writers, directors and actors. This course will explore the aesthetics of cinema, the concepts behind storytelling and various other elements of a film. It will also explore the impact of movies in our society and in our lives. It also encourages students to use films as a medium to analyse visual texts and read underlying messages.

### **OBJECTIVES:**

- To help learners understand the various movie genres and its types.
- To understand various elements that contributes to film making.
- To make them realize the impact of film in society.
- To analyse the visual media and interpret the underlying messages.

### **UNIT I THE COMPONENTS OF FILMS**

**HU5276 UNDERSTANDING SOCIETY AND CULTURE THROUGH LITERATURE L T P C**  
**3 0 0 3**

**OBJECTIVES**

- To internalize the importance of language by understanding its role in the transformation of man.
- To look at language, literature and culture as locus of identity and change.
- To extract meaning from existing literatures and cultures.
- To identify meanings in modern life by reconnecting with lost cultures.

**Unit 1 Introduction**

Why study literature? Tracing the origin – pictures. Tokens as precursors of writing. Movement from three dimensions to two dimensions- Pictography. From visual to oral -Logography. Reading out literature to young children- Edmund J Farrell.

**Unit 2. Reading Culture**

Reading culture through language, signs and consumables- Roland Barthes. Culture through poems- Nissim Ezekiel's 'The night of the Scorpion' . 'Nothing's Changed'- Tatamkhulu Afrika- Apartheid. Ruskin Bond- 'Night train at Deoli'- How real life is different from movies.

**Unit 3. Identifying Meaning**

Searching and locating meaning through literature. Looking for order in a chaotic world. The Myth of Sisyphus (Albert Camus) and Adi Shankar's 'Jagat Mithya'- the world as an illusion. The Indian version as 'meaningless meaning'.

**Unit 4. Post Modernism**

'If on a winter's night a traveler'- Italo Calvino. The book about the reader- the experience of reading as reading. Metafiction. Selfie Culture. Visual Culture as purpose of modern life.

**Unit 5. Returning to Pictures**

Literature of the present- Emphasis on the visual world. Twitterature. SMS. Whatsapp language. Consumer culture. Change in fixed gender notions. Interactive sessions. Introspection.

Reading list

1. Bond, Ruskin: 'Night train at Deoli'
2. Ezekiel, Nissim: 'The Night of the Scorpion'
3. Afrika, Tatamkhulu: 'Nothing's Changed'
4. Barthes, Roland: *Mythologies*
5. Shankaracharya: *Viveka Chudamani*
6. Camus, Albert- *The Myth of Sisyphus*

Attested
